# Microsoft Works: If it's

You were going to do the billing this morning. Right after you did the sales forecast. Which you were going to get to when you figured out how to get the labels printed. For the envelopes. For the catalogs. For the mailing.

We have a name for people like you: Microsoft® Works.

Four stunningly simple, amazingly versatile programs in one. At your fingertips. A microsecond away on the PC nearest you.

**Word processing.** Memos and form letters and more.

**Filing and record keeping.**

Sorting, reporting, searching,

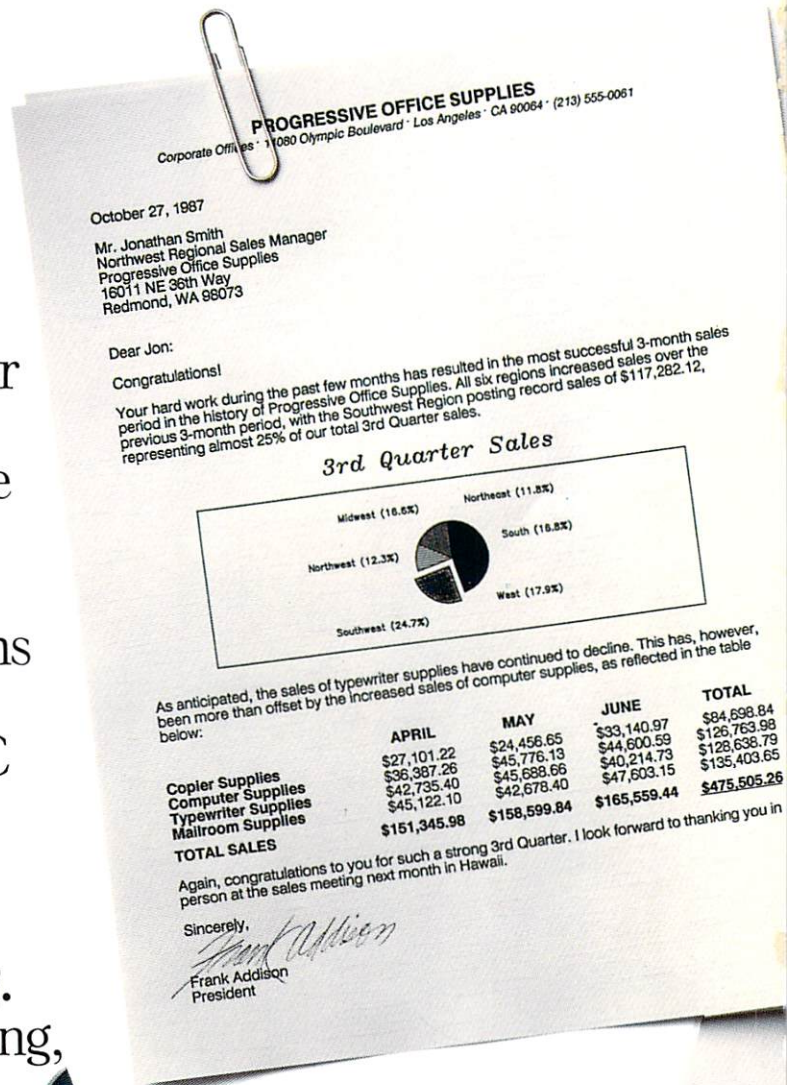

remembering.

Jobs, clients, vendors and promises.

**Spreadsheet.** With all sorts of tasty graphics. Number crunching and analyzing, interpretation and display.

**Talking to the outside world.** About stock quotes, airline schedules, the annual

# not one thing, it's another.

is a snap. It starts with a painless, step-by-step, instantly gratifying computer-based training program. Before you know it, you know it.

Have you been telling yourself that one of these days you're going to get organized, that you're going to find out what the excitement of personal computers is all about?

Well, friend, this is one of those days.

rainfall in Peru,  
anything one computer can  
tell another computer.

# EDITOR'S NOTE

## A QUESTION OF CHOICE

The position from which it's often hardest to judge something is right in the middle. And that's just where we are in terms of the growing home-office, or work-at-home, phenomenon.

Newly released figures from LINK Resources of New York indicate that the number of home office workers now tops 23 million and is growing at a rate of 6.9 percent annually. Does this mean that one day we'll wake up to find our corporate offices deserted and our subways, buses, trains, planes, and highways commuterless? Not on your life.

Thanks first to the microcomputer, and now to the technological advances in personal telephones, facsimile machines, copiers, and other standard office fixtures that have become compact enough and inexpensive enough to bring into the home office, we've broadened our work-related options. And most home-office workers feel that with fewer distractions than they would face in a conventional office, they increase their productivity.

But not everyone wants to or can work from home all the time. What is happening, I believe, is that we're breaking down some long-held definitions of work, office, and office hours. Our work arrangements and understandings are getting looser.

I've written before about the situation at FAMILY & HOME-OFFICE COMPUTING. Technical Editor Joey Latimer divides his time between his home and a small office, both in southern California. He visits our editorial offices in New York once or twice a year. Senior Editor Nick Sullivan travels back and forth between New York and Massachusetts. (In fact, as I write this, I realize that I haven't seen Nick in weeks, even though I have read the articles he wrote and edited for this issue.) The rest of us work at home a day here and a day there, as best suits us.

Bosses, too, now have more choices. Philippe Kahn, President

and CEO of Borland, is an extreme example—a company head who rarely goes into the office.

Other company heads I know or know of choose to use their new freedom from their desks to extend their weekends and their vacations.

Before we can choose where to spend our time, we must make some other choices: Which computer system will we use? Can a fax phone make a big enough difference to warrant the purchase of one? What kind of modem will make us most efficient? These are some of the questions we deal with in this issue.

Our major buyer's guide to computer systems (page 43) helps you to match need to machine; our Office at Home department will bring you up-to-date on the newest developments in pricing and models of fax phones; and 2400-baud modems, a new standard, are covered in this month's Telecomputing department. Of course, our articles and departments on software and hardware and our special feature on desktop publishing will help you make other wise computing choices.

In fact, with every issue we try to help you make the wisest decisions possible in choosing the applications to best meet your needs and the products most suited to bring you the successes you seek through computing.

# Small news from IBM.

## Introducing a new low-priced, high-powered IBM Personal System/2.

It's called the Model 25, for short, and it comes with the power, graphics and quality that have made the IBM® Personal System/2™ family the acknowledged new leader in personal computing. What's more, it comes in a size that fits virtually anywhere and at a price that fits most any budget.

### It's at home wherever you work.

Whether you work in an office, bring office work home or run a business from home, the Model 25 can help you keep up with correspondence, prepare proposals and balance budgets. It can also help you track inventory and handle your business accounting as well.

The system works with the other members of the Personal System/2 family. And it was designed to run lots of the popular programs that are already available for IBM Personal Computers.\*

### It's at home wherever students learn.

In the classroom, dorm and at home, students will love the easy-to-use design and spectacular graphics of the new Personal System/2 Model 25. Parents and school board members will especially love its small price.

Disk drives,\*\* processor and display are all built into a single compact unit. Just plug it into a wall socket, attach the keyboard and it's set to go.

We think you'll find the new Model 25 makes it easier than ever for you to join the next generation in personal computing.

To find out more, visit your IBM authorized dealer. To find the one nearest you, call 1-800-447-4700, ext. 26.

IBM Personal System/2	Model 25
Microprocessor	8086-8
Potential system throughput	More than 2 times IBM PC
Standard memory	512KB
Expandable to	640KB
Diskette size and capacity	3½ inch 720KB
Expansion slots*	2
IBM Keyboard	Enhanced or Space Saving
Operating system	IBM DOS 3.3

\*Model 25 has one full-size and one eight-inch expansion slot.

## RISEING MOONLIGHTERS

I work with computers daily as a pharmacist and have trained dozens of pharmacists to use them for prescription-filling and billing purposes. I'm planning to purchase one for myself this fall and start a moonlighting business at home. Your "Moonlighting" article in the August issue has given me incentive.

ARTHUR ROBY

Staten Island, New York

The story on moonlighting in your August issue intrigued me. For months I've been toying with the idea of earning some extra cash in the evening. If I could use my computer to earn money while enjoying the comfortable surroundings of my home, it would be ideal.

I'd like to see an article on getting started in part-time remote data-entry, since I'm having trouble finding leads in the Dallas-Fort Worth papers. Another interesting story would investigate, describe, and list names and addresses of dependable mail-order companies. This might help bring the mail-order rip-off artist to the brink of extinction.

EDWARD A. MATELSKI

Wichita Falls, Texas

EDITOR'S NOTE: Recent articles on the two subjects you mentioned are "Top 10 Computer-Based Home Businesses" (June) and "The Mail-Order Buying Boom" (August). Watch future issues for more on moonlighting and mail order.

## ATARI COVERAGE

I've been a subscriber to your magazine for two years, and I like much of your coverage. But I really don't think you give enough space to Atari computers; for instance, you didn't review the Mega STs.

MITCH BROWN

Camarillo, California

EDITOR'S NOTE: As of press time, Atari was not yet shipping Mega STs to retailers—or to anyone else in the United States—so machines weren't available for review. For advance information, read the Atari section of this issue's "Buyer's Guide" and our Atari column in the Machine Specifics department. Also, check with Atari users' groups on Compu-Serve (GO ATARI). After the computers become available, look for more coverage in upcoming issues of FAMILY & HOME-OFFICE COMPUTING.

I plan to renew my subscription, but not because of the Atari-specific articles (even your Machine Specifics department doesn't have much 8-bit Atari coverage). I'm renewing my subscription because of your many excellent articles on general computing subjects, particularly "The Mail-Order Buying Boom," in your August issue.

JOHN M. SCHULTZ

 LAKE COUNTY ATARI  
 COMPUTER ENTHUSIASTS  
 Lindenhurst, Illinois

## FAN OF THE A PROMPT

In the article "Tandy Strengthens MS-DOS Line" (September), your comments regarding the A prompt irked me.

I use an IBM PC almost every day, and I like the A prompt. It does what I tell it to, now, without other steps getting in the way. Face it, typing a single command is faster than flagging a series of selections from a menu. To me, using the A prompt is easier, sometimes more efficient, and definitely faster.

I wonder how many "power users" (like me) would rather use the A prompt than a cumbersome menu system. I do admit, however, that if I were a new user, I probably would hesitate to deal with the A prompt.

ERIC HILL

Orange, California

## MORE JOYSTICKS ON THE MARKET

You comment on the lack of adequate joysticks for the Nintendo and Sega systems in "Video Games Reborn," (July), but I've found two on the market. One is the Bandai Super Controller, which is an overlay with mini-joystick attachments for the Nintendo controllers, and the other is the Epyx 500XJ, with various versions available for existing video games and computer systems.

In addition, Atari Corporation will soon be releasing another game system, tentatively known as the XE Game System.

ROBERT RUIZ, JR.

Fresno, California

## CORRECTION FROM CAJUN COUNTRY

I picked up a copy of your magazine in the Houston airport and really enjoyed it. Since I'm responsible for recommending and ordering educational software for Acadia Parish, I

# All work and some play.

## The New OKIDATA 180 and the OKIMATE® 20: Office Quality and Home Versatility.

When the work you do at home needs to look good enough for the office, you need one of these two printers.

Get the new OKIDATA 180 and get crisp near letter quality printing at time-saving print speeds. Enjoy its easy-to-use push-button front panel, easy paper handling and ability to print on anything from letter-head to four-part forms.

And, for pure compatibility, use its dual Commodore® and Epson®-compatible parallel interface.

Take home the OKIMATE 20 and unlock the power of color graphics and 24-element quality.

Give life to your letters with sharp NLQ printing and a choice of built-in fonts. And add impact to your overheads with acetates in hundreds of colors.

The new OKIDATA 180 and the OKIMATE 20 both work beautifully with either your Commodore 64 or 128, your IBM® PC or compatible, Tandy® and most Apple® computers.

These two printers bring home the OKIDATA tradition of toughness you know from the office. *At a price that could convince you to buy both.*

Call 1-800-OKIDATA, Ext. 25, for the name of the retailer nearest you.

REGISTERED TRADEMARKS: OKIDATA, Oki America, Inc., Marque déposée de Oki America, Inc.; OKIMATE, Oki Electric Industry Company, Ltd.; Commodore, Commodore Electronics, Ltd.; Apple, Apple Computer, Inc.; IBM, International Business Machines Corp.; Tandy, Tandy, Inc.; Epson, Epson Equipment Corp.

## Behind every great report card is a great teacher.

A great teacher teaches basics—the skills on which other learning is built. A great teacher encourages kids when they're right and is patient when they're wrong.

Most of all, a great teacher stimulates a child's natural love of learning.

Davidson has a whole school of great teachers that are special because they are designed, tested, and applauded by educators.

Each easy-to-use program includes a variety of fun-filled activities to reinforce learning and keep children challenged for years.

Like other great teachers,  
Davidson software  
doesn't just

teach the right answer, but the concept behind it. So your children will get more than good grades. They'll develop a better attitude towards learning and increase their self-esteem.

Give your children the benefit of another great teacher—Davidson educational software.

Return this coupon to enter our monthly drawing for \$100 worth of free Davidson software.\* We'll also send you more information about all the great teachers available from Davidson.

Or call: 800-556-6141 (Outside California) 213-534-4070 (Inside California)

## LETTERS

enjoyed your Software Guide section.

One minor correction: In your review of *Big Blue Disk*, you referred to Shreveport as Cajun country. Not all of Louisiana is Cajun country. There is an invisible line that runs across the state, dividing north and south Louisiana. Cajun country is south of that line and if you want good Cajun food, please don't try to find it in the northern part of the state!

JERRY WINSTON  
Crowley, Louisiana

### LET'S NOT KID OURSELVES

You're the first professional I've heard admit that "user-friendly" doesn't mean "easy" ("Let's Not Kid Ourselves," Editor's Note; July). I think one of the "miracles of computing" is the low suicide rate among first-time users.

I'm not a computer person; I'm a freelance writer who usually works from home. I inherited a Neanderthal Vector with a 5MB hard disk operating under CPM 86, with *Memorite* software—which I love. It's getting old and things are beginning to go. I'm facing the task of replacement and dreading it for the reasons you stated.

Your Editor's Note made me feel better.

LIN COCHRAN  
Largo, Florida

### SPECIAL THANKS

FAMILY & HOME-OFFICE COMPUTING would like to add the following companies to the list of those who contributed software to our 1987 Computing Family of the Year fifth-prize winners (September 1987, page 53): FIRST STAR SOFTWARE; INFOCOM; MEGA-HAUS; PRECISION SOFTWARE; and QUICK-SOFT.

FAMILY & HOME-OFFICE COMPUTING looks forward to letters from readers. Please direct your correspondence to: Letters to the Editor, FAMILY & HOME-OFFICE COMPUTING, 730 Broadway, New York, NY 10003. Include your name, address, and telephone number. We reserve the right to edit letters for length and clarity.

Due to the large volume of mail we receive, we are not able to respond personally to every letter or request for information. To obtain copies of past programs or articles on specific products, write to Back Issues, c/o FAMILY & HOME-OFFICE COMPUTING, P.O. Box 717, Cooper Station, New York, NY 10276-0717. # THE OFFICE AT HOME

## FACSIMILE PHONES

### The Latest Phones Send Documents For the Costs of Regular Calls

BY ROBERT E. CALEM

Today, one in every five American workers does some job-related work at home. Many "telecommute" via computers and telephones, and the electronics industry that serves them is finally awakening to their needs for quick and easy links to the outside world. Facsimile machines—sophisticated devices that produce copies of images and data sent over ordinary telephone lines and once found only in corporate America—can provide that link.

Fax machines are now smaller and less bulky. They're often integrated with telephones and double as copiers, thus providing three machines in one. In general, fax machines copy and send any 8.5-inch-wide piece of paper with text and pictures, no matter how long the document is. Fax machines can receive these fax files while unattended, though only the most expensive machines can send files unattended. For instance, you might want to send files late at night when phone rates are lower. This year, fax phone prices—which hovered around \$4,000 only two years ago—fell to less than \$1,000. Wider distribution

The Medbar Porta Fax III is a portable fax machine that can send files from any phone.

percent in 1987 and to triple annually until 1992, according to Scott McCready, a senior industry analyst at CAP International, a market-research firm that tracks imaging products. Why? The cost of a facsimile transmission is as low as the cost of a local telephone call, and information can be exchanged much more quickly than if it were sent by overnight courier. In other words, transmission is fast and cheap.

In fact, as with a computer modem, it's the speed at which a fax machine will scan and transmit a document that defines its place in today's market. But, fax machines are different from modems, which send only computer-generated material that must be received by another computer (see "Modems Vs. Fax Phones").

#### TYPES OF FAX PHONES

There are three methods by which a fax scans an image. MH, for Modified Huffman (also known as The Huffman Scheme), is the most common. With MH, the machine compresses each line by identifying changes from black to white. MR, for Modified Read, compresses vertical and horizontal lines. White Line Skip (WLS) automatically skips over white space and goes directly to black. WLS is the fastest scan method and can be found only on the more expensive machines, none of which are covered here.

There are also three groups, or types, of fax machines. Group One (G1) machines, the slowest, will take four minutes or longer to exchange a

single page with a similar machine, regardless of the distance. They're considered obsolete and are no longer manufactured.

Group Two (G2) machines need about two-and-one-half minutes per page. The fastest machines—the Group Three (G3) type—will transmit a page in less than 40 seconds, with some averaging as low as 15 seconds. G3 fax machines account for the vast majority of fax usage.

In fact, all new, low-cost facsimile machines available to the home-office user are G3 models. Some, not all, can receive transmissions from G2 and G1 models. All can double as copiers, but use thermal-type coated paper that produces copies similar to the old-fashioned thermal printers. Most fax machines are integrated with sophisticated telephones, and one even features a telephone answering device (TAD). Store prices generally range between \$1,400 and \$2,000, though the Sharp UX-30 Memofax sells for about \$900.

The Panasonic KX-F115 fax phone includes a telephone answering device and a speakerphone.

#### THE MAJOR PLAYERS

Last year, Canon became the first company to create a fax phone for home-office users, introducing the FaxPhone 10 to local mass-market retailers across the country. Canon's model, originally priced at \$2,495 but since reduced to \$1,995, set the standard for low-cost G2 and G3 compatible personal-fax machines.

The FaxPhone 10 offers its users a claimed transmission speed of 17 seconds per page, one-touch dialing for 16 fax numbers, an additional six numbers in speed-dialing mode, one-touch overseas dialing, five-page automatic document feeder, liquid crystal display (LCD) with interactive

The Sharp UX-80 fax phone can transmit directly from an open book.

means fax phones are available to almost anyone within reach of a department store, specialty phone store, or discount merchandiser.

Home-office demand for low-cost fax machines is expected to rise 200

ROBERT E. CALEM is Home Office Electronics Editor for TWICE (This Week in Consumer Electronics), an industry newsweekly.

## THE FIRST LAPTOP DESIGNED TO BE YOUR FIRST LAPTOP.

Sharp proudly announces the arrival of our new laptop computer.

We've named it the PC-4501. You'll call it the ideal first laptop.

Because it packs the power of a full size IBM® compatible desk top computer into a convenient laptop bundle. It sports features like 256KB Dynamic RAM. 3½" 720 KB floppy disk drive. Flip-up, easy to read, Supertwist LCD display. And, since it can run on batteries, it's completely portable.

You also get a laptop that's fully expandable to include 640KB RAM (or

1.6MB with optional EMS card), a second 3½" 720KB floppy disk drive, a 300/1200 baud modem and a color/monochrome CRT adapter. And if you'd like your favorite applications built-in, you can have your own EPROM card installed.

One more thing you'll enjoy: a price that will pamper your wallet.

For first hand information on the new PC-4501, see your Sharp dealer or call 1-800-BE-SHARP.

**SHARP**

COME SHARP PRODUCTS™

## THE OFFICE AT HOME

prompts, and a full-featured integrated telephone. The phone also offers auto-dialing for 16 voice numbers, on-hook dialing with automatic redial, speakerphone, muting, and built-in hold melody.

Sharp's UX-30 Memofax (\$900) is a G3 fax machine that will send and receive only notepad-size documents. Sharp claims a transmission speed of just 20 seconds—or twice as fast as for regular-size documents. Incoming transmissions of original 8.5-by-11-inch documents are automatically reduced to 4.25-by-5.5 inches for printing. A "fine mode" allows small typeface characters to be printed with greater clarity. An integrated telephone boasts one-touch dialing for three telephone numbers, 10-number speed-dialing, automatic redial, on-hook dialing, and pause key.

A step-up model from Sharp is the UX-80 (\$1,500) copier-facsimile machine. Unique to this G2/G3-compatible unit is the ability to transmit directly from an open book or produce

**The Canon FaxPhone 10 sends the page in 17 seconds and also includes a speakerphone.**

a copy of that document. All other facsimile machines in this price range will only accept single-sheet document feeding. Document size is a maximum 8.5-by-11 inches, and a 40-second transmission speed is claimed.

Brother's Fax 100 (\$1,500), a G3 fax phone, also offers a fine mode. Its built-in telephone has automatic dialing for nine telephone numbers, automatic redial of last number, and ringer volume control.

An interesting device from Panasonic is a brand new fax-phone/telephone-answering device from the company's telephone division. The Panasonic KX-F115 (\$1,995) is G2/G3 compatible and will transmit a page in less than 30 seconds, according to Panasonic. Because it also will answer a call to take a message, the KX-F115 "senses" whether the incoming call is voice or data and automatically switches to the proper mode. Page printout size is a non-standard 8-by-10 inches. The integrated speakerphone/telephone has one-touch dialing, mute, and automatic last-number redial, which is activated by a busy signal.

Toshiba's Personal Facsimile (\$1,999) is G2/G3 compatible with a claimed transmission speed of 15 seconds. It has a talk-request feature—which allows the user to retain a vocal telephone link after a document has been sent or received. This saves the user the cost of an additional phone call. The Personal Facsimile's telephone offers on-hook dialing, memory for 50 voice and 50 facsimile numbers, last-number redial, music on-hold with a selection of three melodies, adjustable ringer volume, and hold-recall warning tone.

Toshiba makes the Faxline fax phone for Northwestern Bell (\$2,100), and it's essentially the same as the Personal Facsimile, except without the music-on-hold option. It does have the added advantage of an automatic five-page feed.

## PORTABLE UNITS

Just as there are portable computers and modems, there are now portable facsimile machines. Travelfax (\$1,300), from Northwestern Bell, is a G2-only machine that weighs less than eight pounds and fits into a briefcase. It's powered by a rechargeable battery that provides enough energy to send or receive 15 pages; it also will recharge in three hours. A combination recharger-AC adapter is bundled with Travelfax. The fax is rather slow, however, with a transmission speed of three minutes per page.

Northwestern Bell also includes an acoustic coupler—which attaches to the handset of public phones—a head-cleaning tape, and 100 sheets of receiving paper. The single available option is an adapter that allows the Travelfax to be plugged into an automobile's cigarette lighter for power.

A G3-only portable unit is available from Medbar Enterprises, a small-office electronics firm based in Woodside, New York. The battery-operated PortaFax 111 costs \$1,995. Features include auto answer, AC adapter-charger, automobile cigarette lighter adapter/charger, removable handle, and an acoustic coupler, which allows remote access from most telephones. Medbar claims a single charge of the battery is good for 25 pages of transmission or reception. Recharge time is said to be half an hour.

According to the manufacturers, future fax phones may have the ability to function on two telephone lines simultaneously, scan images into personal computers via serial port links, or act as telex-typewriter units with optional keyboards. Group Four (G4) machines—faster still than G3—are already available at prices of \$4,000 or higher. As fax machines become even more prevalent in home offices across the country, prices will drop even further and manufacturers will have more incentive to add features. ■

## MODEMS VS. FAX PHONES

Does the emergence of relatively inexpensive fax phones spell the end of computer transmissions via modem? Yes and no. If you want to send a computer file to another person so that it can be edited or changed, you'll want to keep the file in a computer format, and that means transmitting it via modem. The drawback to modem transmission, in most cases, is that the receiver also must have a computer and a modem, unless you send electronic mail that is laser printed and delivered as regular mail.

Fax phones excel in sending office memos, notes, and short documents—especially those with pictures—that aren't in computer format. Rather than sending such a document by overnight mail (expensive), typing it into a computer (time-consuming), or scanning it into a computer (requires a scanner)—you can send it in less than a minute for the cost of a phone call.

Already, however, the two technologies are merging. For instance, you can buy facsimile cards that will let you transfer facsimile files from your MS-DOS computer to a fax machine. The new AppleFax Modem (see this month's *Machine Specifics* department) turns the Macintosh into a fax machine and functions as a 9600-baud modem. Of course, to enter material that is to be transmitted into the computer, you need a scanner, so the system can be unwieldy. For now, it's best to keep modems and fax phones separate in your mind.

—NICK SULLIVAN

## STAYING IN BALANCE

### Check-Writing Programs Like Quicken Won't Make Parting with Money Any Less Painful, But They Will Make It Easier to Pay Your Bills

BY ANDREW TORRES  
AND LISA WU

"I hated paying bills and frequently postponed the ordeal until some were late," said Pat Hales of Glen Burnie, Maryland. Many of us know the feeling. As those windowed bills arrive each month, we stack them on desks, atop refrigerators, or next to telephones, vowing to take care of them later. Later often becomes late.

Hales has changed her ways. She now uses *Quicken* (\$50, Intuit), a check-writing program, and is proud to report that her payments always arrive at their destinations on time.

Stand-alone check-writing programs and financial packages with checkbook sections alleviate the confusion and the drudgery of managing your expenses and can cut in half the time you spend keeping tabs on your money. The advantages of these computerized financial organizers are many. You can use them to "memorize" transactions that you make regularly; they retally your balance whenever you write out a check; they keep a database of all the checks you write; and some even use your computer and printer to print out checks. Best of all, you needn't be a C.P.A. to use these programs. Novices can quickly become adept at managing money.

Paula Galland, a teacher who lives on St. Simons Island in Georgia, never even attempted to balance her checkbook. If her monthly bank statement was within \$100 of her own "guesstimation," she let it slide. When she first heard about *Quicken*, she knew it was for her. Today, she balances her checking account to the penny and once even caught a bank mistake.

### IN CONTROL OF YOUR FINANCES

Although computerizing your checking account may take some

ANDREW TORRES and LISA WU are FAMILY & HOME-OFFICE COMPUTING's editorial coordinators.

time at first, it will be time well spent. Programs that manage your checkbook put you in the driver's seat and help you keep track of where your money is going. This can be especially valuable at tax time, when you'll want to call up all payments that you've designated as tax deductible.

Computerized check writing is a godsend to Joyce R. Scheer, who runs Creative Learning Environments, a tax-exempt health, educational training, and public-relations consulting business, from her home in Clearwater, Florida. Using *Checks & Balances*, a \$75 checking-budgeting program published by CDE Software, Scheer can now keep accurate records of tax-deductible expenses.

Some programs also will remind you when regular payments are due without your booting up the program. (For instance, if you have an IBM PC, a PS/2, or a compatible with a hard-disk drive, you can set up *Quicken* to remind you that a bill is due when you turn on your com-

puter.) Carefully timed payments can help you accrue the highest possible interest on your money and will help you maintain a good credit rating. "I always pay my bills on time," said George Whitehill of Redwood City, California, who uses *Quicken* and his IBM PC XT to organize his family's personal finances, as well as those of his electronics-distribution business. "My wife and I have an excellent credit rating."

### SUIT YOUR SPECIAL NEEDS

Programs that manage checkbooks come in many shapes and forms. Some are part of sophisticated personal-finance packages that do everything from managing your investments to tying into electronic banking systems. For example, *Andrew Tobias' Managing Your Money* (\$150-\$220; MECA) is many powerful programs integrated into one. Its capabilities include budgeting, transaction tracking, insurance, real estate, stock management, tax estimation, and financial-analysis sec-

# AUTOMATED BILL PAYING. AUTOMATIC REPORTS.

ALL NEW!  
Version 2  
For Business or Home

Quicken finishes  
all this in  
under 5 minutes!

Introducing Quicken® Version 2—absolutely the fastest, easiest way to write checks, keep financial records, track income and expenses, budget, and manage your cash flow. It's ideal for business or personal use.

## Now, Finish Financial Chores in Seconds.

Quicken completes your financial work 4 to 8 times faster than ever before:

- Analyze budget vs. actual expenses by month for 12 months: 4 seconds
- Look up a check you wrote 1000 checks ago: 1 second
- Write and print 20 checks and update all records: 3 minutes
- Compile an itemized list of tax deductions for the year: 3 seconds

How can it be so fast? Quicken uses indexed files and speed-optimized C and assembler code—the very latest in high-speed technology.

## So Automatic, It Eliminates Work.

Quicken's fully automatic design features instant "macros" that eliminate repetitious clerical work. Macros remember

you when to pay bills even if you forget to use it! Simply turn on your hard disk PC, and Quicken's pop-up Billminder™ appears when you need to pay bills.

## No Need to Alter Your Bookkeeping Procedures.

Quicken is easy to use because it works just like your checkbook. There's no need to change your bookkeeping format or learn anything new—no accounting jargon, no "debits," no "credits."

Quicken also comes with comprehensive on-line help, a complete manual, and free technical support.

Here's what the critics say:

**"I've never seen such an easy-to-use manual or software that's so simple to use."** *Martin Blumenthal, in Cider Magazine*

**"Extremely simple and fast"** *Esther Dyson, Industry Analyst*

**"Absolutely the best small accounting program made."** *Bob Schwabach, Universal Press Syndicate*

## New Features for Business.

Quicken provides special sections for businesses covering payables, receivables, cash flow forecasting, payroll, petty cash control and job, client, and property bookkeeping.

If you're an accountant, property manager, doctor, consultant, manage a service firm or virtually any other type of business, and you use a checkbook, Quicken will save you time and money starting today.

## Free 30-Day Trial.

Try Quicken. If you're not 100% satisfied, return it within 30 days and you pay nothing.

Current Quicken owners—Call our 800 number for upgrade information.

## Specifications

**Capacity:** Number of bank accounts: unlimited. Number of transactions: unlimited. Maximum amounts: \$9,999,999.99. Number of income/expense categories: 250 with 256K, thousands with 512K RAM.

**Software Compatibility:** Exports data and reports in ASCII. Also exports in Lotus® format with optional Transfer Utility.

**Hardware Compatibility:** All IBM® PC, AT, PS/2® and compatibles with 256K RAM and DOS 2.0 or higher. All Printers. All monitors. Also available for Apple® IIe, IIc and GS with most of the same features.

**Other:** Not copy-protected. Checks are approved for all financial institutions in the U.S. and Canada.

Product names are trademarks of their respective manufacturers.

Quicken remembers the bills you forget.

your bills, print your checks, and update all records automatically. All you do is sign the checks.

In fact, Quicken is so automatic it reminds

# PERSONAL FINANCE

tions, as well as check-writing.

Other programs, such as *Checks & Balances* and *Home Money Manager II* (\$50; HomeCraft Computer Products) are budgeting-checking programs that will help you manage your checking account and establish a budget.

The third type is the stand-alone checkbook program. A couple of software packages that fall into this category are *Your Electronic Checkbook* (\$10, Melody Hall Publishing/ValueTime Software) and *Quicken*. Some will do more than others. For example, *Quicken* will print checks and interface with spreadsheets. By taking a closer look at *Quicken*—available for the Apple II series, IBM PCs, PS/2s, and compatibles—we'll give you a better idea of how a full-featured computerized checkbook works.

## PAYING YOUR BILLS

With screens that duplicate the familiar look of personal checks, *Quicken* lets you balance your checkbook as you would manually.

As you write out a check, *Quicken* enters the transaction on your check register, saving you the trouble of having to fill in the information twice. And once you've recorded the checks, you're ready to print them out onto special checks that are available from Intuit. (Order forms are enclosed in the software package.) *Quicken's* checks, which are printed by the same companies that supply checks to most banks, look similar to ordinary checks, except that they're larger and come with pin-feed holes for your printer.

The advantages of *Quicken* are more evident when you examine the program's "memorize" and "recall" features. Data for frequently written checks, such as mortgage, insurance, and car-loan payments, can be "memorized" and called up each month. Just change the date and, if necessary, the amount.

## CATEGORIZING YOUR EXPENDITURES

Filling in the memo line of your *Quicken* check is optional but may prove useful later on. Let's say you want to keep track of all your business-related expenses so that you can make the appropriate deductions at tax time. Or suppose you want to find out how much money you spent on gas, electricity, or rent

last year. With its search-and-list feature, *Quicken* can find old checks and transactions a lot faster than you can leaf through a pile of canceled checks.

You can conduct searches by date, payee, memo, or any combination of these. For instance, maybe you need to find the rent check you wrote in March 1987 to Fred Zorch, your landlord. Since you've written nearly a dozen checks to Zorch, you must specify both "Zorch" and "March" in order to find the right check.

## RECONCILING YOUR CHECKBOOK

However, you should be aware that deposits, handwritten checks, checking-account fees, cash-card withdrawals, and any interest earned must be recorded manually

## GETTING THE MOST OUT OF CHECK-WRITING SOFTWARE

We asked a number of people how they maximize managing their checkbooks via computer. Here are some of the tips they gave us:

1. Always make backups of your data disks. Otherwise, you risk losing all your financial records.
2. Remember to record all checks that you write manually, as well as deposits, automatic teller machine (ATM) withdrawals, and bank service charges. The program can't reconcile your account if outstanding items aren't recorded in the check register.
3. Finish reconciling one statement before beginning another. If you have to balance more than one statement, do the oldest one first.
4. Use your program's memorize feature (if there is one) to store check information—names and addresses, for instance—that you use on a regular basis.
5. Sit down at the computer once or twice a month to pay your bills and examine your check register.
6. Do you want to categorize expenses for tax purposes? Type BUSINESS or D (for deductible) or some other designation onto the memo line.
7. If you don't want your check recipient to see the memo but feel it's important to have it in your records, first save and print the check and then add the memo.
8. Schedule payments to avoid missing due dates. You may want to use a date book or calendar to note when checks are due. (As mentioned earlier, if you have an IBM or compatible with a hard-disk drive, *Quicken* will automatically alert you to payment due dates.)

in the register to keep your account accurate. Get in the habit of saving all your bank deposit and withdrawal slips in one place until you have a chance to enter them into your computerized check register. (Also, enter the information regularly, even if it's only once or twice a month.) For example, Whitehill tosses all of his receipts into a basket next to his computer so that he remembers to enter the information into his check register. Everything you enter into the register is shown on the screen in the order in which you entered it, and you can review the list or print it out anytime you need to see a check, make a deposit, or check your balance.

If, for some reason, your records don't match your bank statement, *Quicken* will help you find the discrepancy. For example, let's say you have a balance deficit of \$53. You have two options. You can either accept the bank's statement as correct, or you can try to find the mistake. Maybe you didn't mark some checks that have cleared or maybe you incorrectly entered a dollar amount.

And if you'd like to transfer data from your check register into a spreadsheet such as Lotus 1-2-3 or AppleWorks for further manipulation, *Quicken* will guide you through the process. Once you've transferred the information, you can perform any spreadsheet calculations.

In short, managing your checkbook with your computer can turn poor personal financial habits into good ones. If you're the kind of person who tosses aside unopened bank statements, bounces checks, and keeps incomplete check registers, computerizing your checkbook could save you money and aggravation, as long as you're willing to commit yourself to the task. As Garland admitted, "It's so easy to write checks now that paying bills is kind of fun."

*The recently introduced Quicken Version 2 (\$50), for the IBM PC, PS/2, and compatibles, can assemble financial, budget, income, and expense reports and update financial records. A special Bill-minder feature tracks bills and reminds you whom to pay and when. ■*

# SYLVIA PORTER'S PERSONAL FINANCE SERIES MANAGES IT ALL

**Your day-to-day finances. Your financial future.  
And now, your investments, too.**

## Volume 1

### Your Personal Financial Planner™

Helps you track your day-to-day financial data, then combines this information with your future financial objectives to produce the most comprehensive and easily-understood financial planning program available.

#### For Your Day-to-Day Affairs:

- **Maintains your electronic check-book** and credit card transactions.
- **Writes your checks** and balances your checkbook.
- **Prepares and monitors your budget.**
- **Classifies and tracks your taxable income and expenses.**
- **Calculates your net worth and generates customized personal financial statements.**
- **Tracks your financial assets—** and your insurance policies.

#### For Your Financial Future:

Leads you step-by-step through a series of questions regarding your financial goals, and your current financial condition. Your answers will enable your computer to determine and print a summary of the amounts you must save each year to meet your financial objectives—in both real and inflated dollars.

#### Each SYLVIA PORTER program:

- **Interfaces with the others in the Series:** You need to enter data only once.
- **Generates unique graphic representations** that display your data in colorful charts.
- **Includes a Customized Report Writer** that prints out any report you want, tailored to your specific needs.
- **Includes Timeworks New Quick-Start Mini Manual:** Gets you up and running in less than 50 minutes!!

MORE POWER FOR YOUR DOLLAR

Timeworks, Inc., 444 Lake Cook Rd., Deerfield, IL 60015  
312-948-9200

## Volume 2

### Your Personal Investment Manager™

This program combines portfolio management with powerful graphics and communications capabilities, enabling you to manage your *entire* investment program. YOUR PERSONAL INVESTMENT MANAGER is for both beginning and advanced investors—and for both novice and experienced computer users.

Advanced window capability allows you to view information on any transaction—as the need occurs—without leaving the section you're currently working in.

#### Features:

- **Manages your investment transactions:** Organizes, classifies, and maintains all important data on investment transactions. Manages multiple portfolios that include stocks, bonds, mutual funds, commodities, and much more.
- **Tracks and automatically updates your investments in each portfolio:** Plus, maintains financial profiles on individual companies.
- **Telecommunications access to on-line services:** Lets you automatically update your investments using current and historical prices from Dow Jones, CompuServe, and Warners.\*\*

## A GUIDE TO 2400-BAUD MODEMS As Use Spreads, High-Speed Modems Gain Appeal

BY RIC MANNING

Two years ago, a 2400-baud modem seemed like an exotic device suited mostly for high-powered business computer users. Skeptics said high-speed data transfer would be slow to catch on because in order to work, both ends of the connection needed compatible hardware. And in 1985, hardly any information services supported 2400-baud access.

But today, the faster communication speed is rapidly becoming the communication standard. Sales of 2400-baud modems have more than doubled each year since 1985, according to Dataquest, a San Jose market-research firm. After selling about 45,000 units in 1985, manufacturers expect to sell about 200,000 this year—about 20 percent of all modems sold.

A fast modem has the same appeal as a fast car: compared to a 1200-baud modem, a 2400-baud modem theoretically can go twice as far in the same amount of time or arrive at its destination twice as fast. On the average, a 2400-baud modem should transmit the equivalent of a double-spaced typewritten page in about six seconds.

For people who pay by the minute for telephone service and for the time spent on information networks, the increased speed of the 2400-baud modem can mean significant savings. But before you figure on cutting your phone bills in half, keep a couple of things in mind.

### TWO REMINDERS

For one, remember that downloading files from a network—which is where the transmission speed really makes a difference—is probably just part of what you do on-line. Much of the time, people who go on-line are interacting with the host com-

puter—sending messages and waiting for responses. That's what happens when you log on, check for mail, read conference postings and stock quotes, or chat with another user. Unless you're a terrific speed reader and can type like lightning, a 2400-baud modem won't cut the price of those activities.

In fact, some subscription services charge more for 2400-baud access than 1200-baud access, so it could cost more to communicate at the higher speed. The Source, for example, charges 11 percent more for 2400-baud access during nonprime hours. However, CompuServe has dropped its surcharge for high-speed

users, and other networks also are moving in that direction.

Another thing to remember is that many time-sharing services, including Telenet and Tymnet, don't support 2400-baud access in all areas. (Telenet and Tymnet are systems that link you to information networks, such as CompuServe.) Telenet, for example, has nearly 400 access centers across the country, but only about 130 of them are equipped for 2400-baud communication. Fifteen states don't provide any 2400-baud access to the Telenet network. Even CompuServe, the largest network, doesn't offer 2400-baud access all over the country.

The modems pictured here are (clockwise, top): Novation Professional 2400, Hayes Smartmodem 2400, Prometheus ProModem 2400, Okidata Okitel 2400, and Ven-Tel 2400 Plus.

RIC MANNING, a computer writer for the Louisville Courier-Journal and editor of Bulletin Board Systems newsletter, wrote "The Remote-Controlled Computer" in the August issue. He receives electronic mail on The Source (STQ007) and CompuServe (72715,210).

# Sit Down And Go Shopping.

**CompuServe takes you on a coast-to-coast shopping spree from the comfort and convenience of your home.**

Now you can shop the entire country through THE ELECTRONIC MALL™ from CompuServe. Stop in online at Waldenbooks, Express Music, even the Metropolitan Museum of Art. It's an easy and exciting way to buy goods and services from the nation's top merchants and businesses without ever having to leave home.

Plan your shopping adventure by department: Apparel & Accessories, Automotive, Books & Periodicals, Gifts & Novelties, Computing, Gourmet & Flowers, Hobbies & Toys, Merchandise & Electronics, Online Services, Premium Merchants, Music & Movies, Health & Beauty, Financial, Travel & Entertainment, Office & Supplies, Sports & Leisure.

You can also join Comp-u-store, a computerized discount shopping service. Access over 250,000 products with savings of up to 50%.

## Take the 15-Minute Shopping Comparison Test:

**Here's what you can do in 15 minutes shopping THE ELECTRONIC MALL way:**

- Look up the latest in computer accessories.
- Select one and enter the order command.
- Shop for unusual and unique gifts for every member of the family.
- Get information on that new car you've been thinking about buying.
- Request a department store catalog. Pick out a new wardrobe. Toys. Tools. Anything you wish.
- Place your order.

**Compare all that with what you can do in 15 minutes of shopping the old way:**

- Round up the family and get in the car.

**THE ELECTRONIC MALL—another valuable service from the vast world of CompuServe.**

Only CompuServe subscribers can shop online in the fabulous ELECTRONIC MALL. So join now and find an exciting selection of top-quality merchandise and useful product information services 24 hours a day, seven days a week.

CompuServe Information Services bring you information, entertainment, personal communications and more. You can access CompuServe with almost any computer and modem.

Start your own cross-country shopping spree today. To buy a CompuServe Subscription Kit, see your nearest computer dealer. To receive our informative brochure or to order direct, call or write.

KEY: I Internal mounting (IBM PC and compatibles); E External stand-alone;  
A Asynchronous transmission; A/S Supports asynchronous and synchronous  
transmissions; Prices are manufacturer's suggested retail.

<sup>1</sup>Half-size cards.

<sup>2</sup>The V-series attachment (\$349) almost doubles the rate of transmission.

<sup>3</sup>Smartcom software is \$50.

## HOW TO READ THE CHART

The chart above lists popular 2400-baud modems from major manufacturers. All are Hayes compatible, according to the manufacturers. Most are stand-alone models that can be attached to any computer through a standard RS-232 serial port. The internal models are slot-mounted versions for the IBM PC and compatibles.

CCITT V.22 bis is an internationally recognized standard for 2400-baud modem-to-modem communications. Some information networks in the U.S. (such as CompuServe) adhere to the CCITT V.22 bis standard. In addition, most modems support CCITT V.22 at a transmission rate of 1200 baud.

In addition, you may have to upgrade your software if you move to a higher transfer speed. Some users have experienced delays using the XModem file-transfer protocol with their 2400-baud modems. The problem, says Gene Plantz, operator of a bulletin board system in suburban Chicago, is that a few 2400-baud modems come with their own error-correcting circuit. With both modem and software checking for errors, the effective transfer speed goes down.

The reason for special error-checking circuits, of course, is that higher speeds put more demands on standard telephone lines. Thus, some 2400-baud modems may have to adjust to lower speeds on poor long-distance connections. Almost all modems back down automatically (to 1200 baud or lower) if they can't establish a good connection at 2400 baud. (This often presents a new problem—yet to be fully solved by developers—because the software rarely recognizes or adjusts to the lower speed.) Nonetheless, there are fewer transmission errors with 2400-baud modems than skeptics expected when they were introduced.

## FINAL REMINDERS

One issue to consider, depending on your needs, is whether the modem is capable of both asynchronous and synchronous communication. The former—which is slower—is the standard for computer-to-computer conversations and bulletin board access. But you might need synchronous capability—which is faster—to connect to a mainframe.

Compatibility with the Hayes command set is widely accepted (all the modems in the accompanying chart are "Hayes compatible," according to the manufacturers), but not every manufacturer supports every one of the Hayes commands. Check the specifications if your modem has to emulate a Hayes modem exactly.

Don't worry that 2400-baud modems will be left in the dust by even faster modems anytime soon, even though companies are promoting models that transfer data at 9600 baud. Unlike the international standards that govern most 300-baud, 1200-baud, and 2400-baud communications, there's no widely-accepted standard for super-fast modems, so models from different manufacturers can't talk to each other. ■

# NOW YOU CAN HAVE THE MODEM YOU'VE ALWAYS WANTED AT A PRICE YOU NEVER DREAMED YOU COULD GET.

At Hayes we just found a way to make the best-selling PC modems in the world even better. We lowered their price. From now on our Smartmodem 2400,<sup>™</sup> Smartmodem 2400B,<sup>™</sup> Smartmodem 1200,<sup>™</sup> Smartmodem 1200B,<sup>™</sup> Smartmodem 1200C<sup>™</sup> and our new Smartmodem 1200A<sup>™</sup> will cost considerably less. Up to one-third less.\*

So if you've always wanted a Hayes modem, external or internal, for an IBM<sup>®</sup> PC or compatible, IBM PC Convertible, Apple<sup>®</sup> Macintosh,<sup>\*\*</sup> Apple II, or almost any other PC, now you don't have to settle for less. Just pay less.

## IBM DOESN'T ALWAYS MEAN BUSINESS: PART I

### There Are Plenty of Good Education Programs for Families with IBM PCs, PS/2s, and Compatibles

BY TONY MORRIS

Not too long ago, if you were shopping for a computer that your kids could use for learning, most salespeople would have recommended an Apple IIe. They probably would have walked you right past their display of MS-DOS computers muttering "business machines."

Not any more. Now that so many people are using IBM PCs and compatibles to manage household finances, finish office work at home, and set up home-based businesses, personal computers have become downright personal.

People of all ages have transformed IBM PCs—and the flock of compatibles that have followed—into work, play, and learning tools. Everyone in the family—from a mother who's running a desktop-publishing business to a toddler who's learning to recite the alphabet—has uses for these computers. Indeed, many of the best education programs, traditionally available only for Apple computers, run on IBM PCs, the newer Personal System/2, and IBM-compatible computers. As long as you have color-graphics capability and a color monitor, you have a large selection of truly outstanding learning packages. In this two-part series, we're going to take a look at programs available for IBM computers that FAMILY & HOME-OFFICE COMPUTING reviewers can recommend wholeheartedly. This month, we'll tell you about language arts and math programs.

#### READING

**Reader Rabbit.\*** Nine games help build children's early reading skills, including letter and word recognition, memory skills, vocabulary, spelling, and concentration. Recommended for ages 4–7. (\$40, 256K. The Learning Company, 6493 Kaiser Drive, Fremont, CA 94536; [800] 852-2255. Also available for 64K Apple IIgs.)

TONY MORRIS, a contributing editor for FAMILY & HOME-OFFICE COMPUTING, wrote "Planning the Future" for the June Home-School Connection department.

Reader Rabbit

#### WRITING

**A-Plus ETG.\*** A word processor tailored for high school and college students. Includes a graphics program that lets users insert graphs, charts, and other graphics into documents. (\$90, 256K. Savtek Corporation, P.O. Box 1077, Waltham, MA 02254; [617] 891-0638.)

A-Plus ETG

**Bank Street Writer Plus.\*** A word processor designed for ease of use; can be used by both adults and children. (\$100. Broderbund, 17 Paul Drive, San Rafael, CA 94903; [415] 492-3200. Also for 128K Apple.)

**Homework Helper Writing.\*** By asking questions, this interactive program helps students generate ideas, organize ideas into outlines, and write papers using a built-in word processor and spelling checker. For preteens. (\$50. Spinnaker Software, One Kendall Square, Cambridge, MA 02139; [617] 494-1200. Also for 128K Apple, C 64/128.)

**Homeworker.\*** An integrated word processor, outline, flash-card maker, grade keeper, and more that helps high schoolers organize and complete homework assignments. (\$90, 256K. Davidson & Associates, 3135 Kashiwa Blvd., Torrance, CA 90505; [213] 534-4070. Also available for 128K Apple.)

**Term Paper Writer.** Adds a layer of structure to your children's writing. Helps students organize ideas, draw outlines, make notes, write drafts, and add footnotes and bibliographies. (\$50, 256K. Personal Choice/Activation, 2350 Bayshore Parkway, Mountain View, CA 94043; [415] 960-0410. Also available for 128K Apple, C 128.)

**Writer's Helper.\*** More than 20 modules provide help with finding a topic to write about, coming up with creative things to say, organizing thoughts, putting them in writing, and then evaluating the resulting paper for common errors. Ages 12 and up. (\$120, 192K. Conduit, The University of Iowa, Oakdale Campus, Iowa City, IA 52242; [319] 335-4100. Also available for 64K Apple.)

#### SPELLING

**Sea Speller.** Race-the-clock underwater adventure that teaches spelling and reading skills. Ages 7–10. (\$10. Fisher-Price/Spinnaker, One Kendall Square, Cambridge, MA 02238; [617] 494-1200. Also available for Apple and C 64/128.)

**Spell It!** Children can practice spelling 1,000 commonly misspelled words or words of their own choosing. Can buy data disks that adjust spelling level. Ages 10 and above. (\$50. Davidson & Associates, see address and phone number above. Also for Apple, Atari 800/XL/XE, C 64/128.)

\* Indicates that the program is also available for the IBM Personal System/2, IBM Convertible, Tandy 1000 HX and TX, Zenith Eazy PC, and any other IBM-compatible computer that uses 3.5-inch drives.

# A **FREE** Software Offer from Britannica Software! To introduce *your* family to *our* family.

Now you can educate, enrich and entertain everyone in your family with Britannica Software.

There's software to teach little Wendy to read. Software that helps Candace with her exams and software that helps Mom manage the household. There's even software to help Grandpa invest his savings. And much more. Plus, right now, Britannica Software has a way for you to get any one of their software programs FREE! Just purchase any two Britannica Software titles and receive a third title FREE!\*

With four different software families to choose from — DesignWare, EduWare, Blue Chip Software and DesignWare Plus — you're sure to find several programs that are just perfect for each member of *your* family. Here are a few of the titles you can choose. But you're welcome to select *any* Britannica Software title for this special FREE offer.

Help youngsters turn learning the basics into lots of fun.

EduWare's tutorial approach emphasizes the fun of learning. Hundreds of words and

pictures help little Wendy learn to read in **Spelling and Reading Primer™** (for ages 4–8). And lively animation and catchy tunes hold her attention as she learns counting, comparing shapes, measuring — even simple addition and subtraction — in **Introduction to Counting** (for ages 4–8).

DesignWare's entertaining software grows with your children — to keep learning alive. Juanita improves word recognition and spelling with **Spellicopter®**, a fast-paced helicopter rescue game (for ages 6–10). And she learns to think fast as she masters arithmetic facts with **Math Maze®** (for ages 6–11).

Give teens a homework advantage.

Skip starts out as cub reporter and works his way up to editor-in-chief in the fun-filled **Grammar Examiner™**. And he becomes as knowledgeable as a seasoned U.S. traveler with **States & Traits™**. (Both programs are from DesignWare and both are for ages 10 & up.)

EduWare's **Algebra Series** offers Bill a serious — and very effective — tutorial

approach to high school algebra. He'll start with **Algebra I** and work his way through the entire series.

Let the whole family get down to business

Home productivity software from DesignWare Plus makes the business of living a whole lot easier. Mom can write letters, tally numbers, and prepare mailing lists with **W.O.R.K. at Home™**. She learned it quickly and finds it easy to use. Candace uses **Remember!™** to help her memorize important facts — so she can ace those college exams.

Blue Chip Software's fun-filled simulation software teaches the ins and outs of investing. Uncle John gets his feet wet in the stock market (without taking a financial bath) with **Millionaire II™**. Nancy Brent, next door, is discovering how to build her fortune in real estate with **Baron™**. And Grandpa uses **The American Investor™**. The Official Simulation of the American Stock Exchange, to understand the best strategies for managing his investment portfolio.

# The most powerful Apple II in history.

If the idea of getting a computer for the family intrigues you, then there's one subject you'd do well to study. The Apple IIgs™.

There are more Apple® IIs in more schools than any other personal computer. And the IIgs is at the head of the class. Which is not surprising. After all, it has enough power to run virtually all 10,000 Apple II programs. Up to three times faster than they've ever run before.

What's more, Apple IIgs graphics programs let you use over 4,000 colors with near photographic realism. And its music programs let you simulate anything from a human voice to a symphony orchestra.

\*Anyone, that is, who's an artistic genius. But take heart, all the colors and all the notes are there. ©1987 Apple Computer, Inc. Apple and the Apple logo are registered trademarks

# And every other subject.

In short, the IIGS runs programs that cover every area of human endeavor, from writing a school paper to planning a company budget. Kids can study anything from ABCs to SATs. And anyone can learn to paint like Monet or compose like Mozart\*.

All this on one of the easiest subjects in the world to master—the Apple IIGS.  
Interested?

Then why not pursue this subject with your nearest authorized Apple dealer.

You'll find that once your family sees and hears what the Apple IIGS can do, the idea of owning any other kind of personal computer will be, well, history. 🍏 The power to be your best.™

of Apple Computer, Inc. Apple IIGS and "The power to be your best" are trademarks of Apple Computer, Inc. For an authorized Apple dealer near you, call 800-538-9696, ext. 600.

# HOME-SCHOOL CONNECTION

**Wizard of Words.\*** Imaginative program uses five animated games and sound effects to teach spelling as well as reasoning, logic, and strategy. Terrific for weekly spelling lists or custom-made word lists. Built-in 38,000 word list. Ages 5 and above. (\$40. Advanced Ideas, 2902 San Pablo Ave., Berkeley, CA 94702; [415] 526-9100. Also available for Apple, C 64/128.)

Wizard of Words

## VOCABULARY

**Word Attack.\*** Uses quizzes and an exciting arcade-type game to help preteens build their vocabulary and learn factual information (such as historical dates, names, state capitals, and minerals). French, German, and Spanish versions are available. (\$50, 256K. Gessler Educational Software, 900 Broadway, New York, NY 10003; [212] 673-3113. Also available for Apple, C 64/128.)

## GRAMMAR

**The Grammar Examiner.\*** Provides the excitement of a board-type game with practice in writing and editing skills (such as identifying errors in grammar, punctuation, and capitalization). For youngsters ages 10 and above who need a little extra motivation. (\$40. Britannica Software, P.O. Box 77186, San Francisco, CA 94107; [415] 546-1866. Also available for Apple, C 64/128.)

**Grammar Gremlins.\*** Preteens can practice the parts of speech, sentence structure, correct punctuation, subject-verb agreement, and more. (\$50. Davidson & Associates, see address and phone number above. Also available for 64K Apple.)

**Writing (Volumes 1-5).** Provides a thorough tutorial and exercises for recognizing proper forms for con-

tractions, correct punctuation, complete sentences, and subject-verb agreement. Ages 12 and above. (\$40 each. Britannica Software, see address and phone number above. Also available for Apple.)

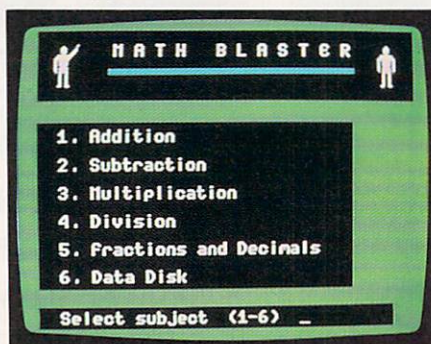

**Writer Rabbit.\*** Children, ages 7-10, can play six games that will help them learn to identify nouns, verbs, and other words and phrases with this inviting drill-and-practice, tutorial, and problem-solving program. (\$50, 256K. The Learning Company, see address and phone number above. Also available for 64K Apple.)

## MATH

**Alge-Blaster.\*** Supplements classroom work by providing algebra instruction and practice. (\$50. Davidson & Associates, see address and phone number above. Also available for 64K Apple, C 64/128.)

**Math Rabbit.\*** These 12 games teach early math skills, including counting, addition, and subtraction. Also includes drill and problem-solving sessions. (\$40. The Learning Company, see address and phone number above. Also available for 64K Apple.)

**Math Blaster Plus.\*** Students practice addition, subtraction, multiplication, division, fractions, decimals, and percents. Can record results and print certificates of excellence. (\$50, 256K. Davidson & Associates, see address and phone number above. Also available for 128K Apple.)

Math Blaster Plus

**Math Shop.\*** Children solve math problems as they help proprietors serve customers in ten stores (\$40, 256K. Scholastic Inc., 730 Broadway, New York, NY 10003; [212] 505-3000. Also available for 64K Apple.) ■

# What to do when your child comes home with poor grades.

PRACTICAL TIPS FROM SYLVAN ON RESPONDING TO POOR SCHOOL PERFORMANCE.

**P**oor grades can be disappointing to parent and child alike. But viewed as important signals, they can prompt action which may actually improve your child's learning skills for life. Here's what Sylvan advisors have to say.

*Dr. Ted Bell, former U.S. Secretary of Education:* "The problem may be physical or emotional, but in most cases, it goes back to a previous lesson—usually a basic math or reading skill—that wasn't fully understood. This can be turned around with the right kind of help. Ask your child's teacher."

*Dr. Vincent E. Reed, former U.S. Asst. Sec. for Elementary and Secondary Education:* "Poor grades will lower any child's self-esteem. If you show disappointment, make sure your child understands it's out of concern for his education—not out of disappointment in him as a person."

*Dr. Glenn Hogen, V.P., Education, Sylvan Learning Corporation:* "You may not realize it at the time, but when you help your child with his studies—by giving a hand with homework, rewarding extra effort, or providing outside assistance—you're making him feel loved enough to succeed."

## How Sylvan Learning Centers can help.

Sylvan is a national network of private educational centers specializing in basic reading and math skills. If your child is having a

Sylvan Advisory Board members Dr. Glenn Hogen, V.P. of Education, Sylvan Learning Corporation; Dr. Ted Bell, Former U.S. Secretary of Education; Dr. Vincent E. Reed, Former U.S. Asst. Sec. for Elementary and Secondary Education.

problem at school, we can help. We'll begin with diagnostic tests to pinpoint exactly where, in the

**"in most cases, it goes back to a previous lesson...that wasn't fully understood."**

normal sequence of reading and math lessons, your child began to have problems. (A fourth grade child, for example, may be having problems with multiplication tables, which are usually taught in third grade.)

Then, instead of beginning your child's instruction at that point, or even at the next level, we'll actually back up a step. That way, your child will experience success—and confidence—right from the start.

## Individualized instruction, personal attention.

Your child will be given an individualized learning program

designed to accommodate his own personal needs. His Sylvan teacher will work closely with him every step of the way. With plenty of warm support and encouragement, and state-of-the-art materials, your child's learning skills—and self-esteem—will improve dramatically.

Our approach works. So much so that we can actually guarantee results.

## The Sylvan Guarantee

*When enrolled in our basic reading or math program, your child will improve at least one full grade equivalent score after 36 hours of instruction, or we will continue up to 12 additional hours of instruction, at no further cost.*

Measurement will be based on a nationally recognized achievement test for improvement in either reading (comprehension or vocabulary) or math (computation or application).

## Call today for more information.

Help improve your child's learning skills for life. For a free consultation, or for more information, call the nearest Sylvan Learning Center today.

## HINTS, NEWS, AND NEW GAME FORMATS

### WHAT'S NEW, AND WHAT'S RUMORED?

★ **John Madden** hates airplanes. Whenever the former coach of the **Oakland Raiders** took his team on the road, he would hop on a train and send his team by plane. (Madden even appears on a train in a Miller Light beer commercial.) So it's no surprise that when he agreed to work on a football program for **Electronic Arts**, company president **Trip Hawkins** and the football whiz mapped out the game while traveling by train from Madden's Denver home to EA headquarters in San Mateo, California. On a recent visit to EA, we got a sneak preview of *John Madden Football*. It's amazing. The game is expected out soon for the **Apple**. . . . There are many people who, like Madden, would prefer to stay on the ground than be 40,000 feet up. But on the ground, **IBM** owners have been going bonkers over *Chuck Yeager's Advanced*

Strap yourself into the cockpit of *Chuck Yeager's Advanced Flight Trainer*.

*Flight Trainer*. (**Chuck Yeager** is the Air Force Brigadier General who shattered the sound barrier 40 years ago.) EA shipped 30,000 copies in the first month of its release; the figure is expected to soar to 100,000 by Christmas. It's fast becoming the best-selling MS-DOS game on the market. Who says IBM owners don't play games? . . . For gamers interested in the secret level of EA's *Marble Madness*: It's not a special edition. You just have to work your way deep into the game before you find it.

★ Look for **Microsphere** titles under the company's new name, **Paragon Software**. Paragon's newest release is

Kill the evil shogun in *The Last Ninja*.

*Master Ninja: Shadow Warrior of Death*, a \$35 martial arts action/adventure game for the **IBM PC/PCjr**.

★ Speaking of ninjas, **Activision** has released *The Last Ninja*, which is based on an ancient Japanese legend. Armed with martial-arts skills and weapons (such as nunchakus, spears, swords, and throwing stars), you must recover the sacred scrolls and kill the evil shogun. Your journey takes you through six levels of difficulty, and there's even an original soundtrack. *The Last Ninja* costs \$35 and is available now for the **C 64/128**. **Apple** and **IBM PC/PCjr** versions will follow early next year. . . . Activision has added more classic titles to its line of **Solid Gold Software**. (This line features rereleases of popular games at lower prices.) *Hacker* costs \$15 for the **Apple**, **C 64/128**, and **IBM PC/PCjr** and \$25 for the **Macintosh**. For \$15, **Apple**, **Atari 800/XL/XE**, and **C 64/128** owners can buy *Ghostbusters*. **Apple** and **C 64/128** versions of *Little Computer People* cost \$15. *The Great American Cross-Country Road Race* is \$15 for the **Apple**, **Atari 800/XL/XE**, and **C 64/128**. And last but not least, two titles, *Pitfall* and *Demon Attack*, were released as a \$15 floppy (a flippable floppy) for the **Atari 800/XL/XE** and **C 64/128**. Also, *Star League Baseball* and *On-Field Football* can be bought as a **C 64/128** floppy for \$15.

★ An agreement was successfully negotiated between the worlds of film and software. **Lucasfilm Games**, a division of **Lucasfilm Ltd.**, is publishing *Maniac Mansion*, which is to be distributed by **Activision**. Stalk through a 55-room mansion as you try to res-

cue a friend being held captive by a bizarre family. A beautiful girl disappears and a mad doctor schemes to take over the world—among stranger things. *Maniac Mansion* is available now for **Apple** and **C 64/128** owners for \$35.

★ You're behind the wheel of a 2,500-horsepower race car, revving it up and readying to pop the clutch. Red turns to green, and you tear down the quarter-mile track heading to the finish line. You've entered the world of drag racing with *Top Fuel Eliminator*, **Gamestar's** newest sports simulation. The game is available for the **Apple** and **C 64/128** for \$30.

★ You might remember the first computer game from **Sierra On-Line**, *Mystery House*, a haunted-house murder mystery in black and white with stick-figure characters. Pretty primitive stuff. To celebrate its seventh birthday, Sierra On-Line is releasing *Mystery House* for **Apple** owners into the public domain. As far as we know, this is a first for any software publisher. For the small sum of five dollars—to cover postage and handling—you can buy a copy and even make copies for your friends and family. Send your check to Sierra On-Line, P.O. Box 485, Coarsegold, CA 93614. . . . The best-selling arcade game in Japan, *Thexder*, has made its way to software shelves in America. The object is to transform the character from robot to plane, winding your path through mazes in order to locate and blow up the control center. It's available from Sierra On-Line for the **Apple II/6s** and **IBM PC/PCjr** and is \$35.

★ **PBI Software** knights you in *The Tower of Myraglen*, and you battle the forces of evil to save the King-

# This is the difference between reading an adventure and living one.

Picture the most exciting text-only Adventure in your software collection— WITH PICTURES!

GUILD OF THIEVES is the long-awaited sequel to THE PAWN, which came sizzling onto the software scene to awards and accolades. Both are available now from Firebird.

These stunning Adventures, completely different from any game you've ever played, seduce the sight with

their breathtaking illustrations and engage the intellect with a truly revolutionary text-handling system. The most sophisticated parser on the market lets you input complicated sentences and interact with a whole cast of fascinating characters in the mythical kingdom of Kerovnia.

GUILD OF THIEVES and PAWN, Computer Entertainment Adventure of the Year, come to you from Firebird, publishers of world-famous leading edge games under the Rainbird label.

You'll find the Firebird logo on other addictive Adventures too, as well as on absorbing Strategies, realistic Simulations, and fast-paced action Arcade games.

Firebird brings the best in entertainment software to those who enjoy a whole range of interactive excitement. We'll prove to you that you don't have to keep switching brands to satisfy your obsession for challenge!

dom of Myraglen. Intricate traps, wizards, riddles, monsters, and secret passages—all the ingredients of a medieval quest—have been added along with graphics and sound that take advantage of the stretch capabilities of the **Apple IIs**. *The Tower of Myraglen* is available now for the **Apple IIs** and costs \$55.

★ Three new releases from **Mindscape** are out, all priced at \$30. **C 64/128** owners can defend feisty old ladies in the dangerous urban jungle of *Bop'N Rumble*. Chalk up, **Atari ST** owners, and play 3-D billiards inside the cube of *Q-Ball*. *Plutos* is a space shoot-'em-up arcade game, also for the **Atari ST**, that puts you in command of a spaceship. Your mission: Destroy the mothership's defenses.

—LISA WU

## GAME HINTS

**DARK CASTLE** (Silicon Beach Software). Run, jump, duck, and fight your way through a multilevel castle in an attempt to dethrone the evil Black Knight. Before you can attempt this, you must recover and utilize the magical Shield and Fireball, or you will never succeed. Rats, bats, vultures, dragons, magic brooms, and traps further complicate your mission. (Macintosh)

★ When you first start playing the game, pick one of the mystery doors. If you end up in the Trouble section, quit and restart the game. Since the Trouble levels are not necessary for completion of the game, you should only go through them if forced (falling into a pit, for instance). If you find yourself in the Fireball section, back out into the Main Hall and proceed to the Shield levels. This will allow you to attain the Shield, and then you'll know exactly where to go to get the Fireball.

★ Always complete the Shield sec-

tion first, then the Fireball section; the Shield is more useful when obtaining the Fireball, than the Fireball is when obtaining the Shield.

★ **Shield One:** Move across the first and second floors taking running jumps, as this is faster than just running. Stop three-quarters of the way across the second floor and kill the mutants on the third floor. Wait for the first boulder to go by the top of the ladder before climbing up. Run across the third floor and wait for the right moment to climb to the fourth and fifth levels. (Running jumps are faster than boulders, and you may catch up with one.)

★ **Shield Two:** Before you start moving, kill at least half the vultures. Run to the other side of the screen, avoiding the pit that leads to Trouble Three, and stop. Kill any nearby vultures before climbing the stairs. When there are no vultures nearby, stand at the base of the ladder and wait for the dragon to breathe. As soon as it stops, climb the ladder and run to the right; you will be able to get through the door before the dragon comes out again. Although dumping water on the dragon will work also, this is a faster, safer method.

★ **Shield Three:** Kill the bats before jumping onto the first rope. When you move to another rope, make sure you turn yourself so that you're ready to grab the next one quickly.

★ **Shield Four:** Pull the lever to determine which ledges are real and which are illusions. Once you've climbed up the ledges, wait until the clouds have reached the left side of the screen and are starting to move to the right before climbing to the top level. When the clouds turn around again, wait until both have shot lightning bolts, then run past them. Grab the Shield and wait until the clouds start approaching you. Use the Shield when a cloud is close by. This will protect you from the bolt and teleport you back to the Main Hall with the Shield's powers.

★ **Fireball One:** Kill at least half of the vultures, if not all, before moving. Move halfway across the screen and then kill any mutants on the ground. From there, go to the ropes and climb up when the coast is clear.

★ **Fireball Two:** Once you've killed the bats, jump onto the first approaching platform when it's about one inch away. In the same way, jump to the second platform. Move to the right side of this platform and wait until you're moving in the same direction as the third platform.

Which mystery door will you open?

When the third platform passes over land and your platform starts to move in the other direction, jump. When you recover from the fall, move to the left side and wait until the small platform to the left of you starts to move away, then jump. Before going to the next platform, you'll have to wait awhile before you can jump. Wait on the left side of your platform, and when the timer reaches 660-670, you can jump safely. To reach the last platform, wait until it moves underneath you and then starts to move away before jumping. That's about 340 on the timer.

★ **Fireball Three:** Jump onto the first raft when it's about one inch away from you. Use the Shield if any boulders come at you. Don't kill the mutant until you are more than halfway across the lower level. Go to the right side of the log and wait until the last possible moment before the raft goes down the waterfall.

★ **Fireball Four:** Immediately go down the stairs and take a few steps to your right. When the broom gets close to you, use the Shield until it has passed through you. Be careful; it can kill you sooner than you might think. Whatever you do, don't hit the broom. It will simply split into two brooms. Run to the right side of the screen, hit the floating eye, and then jump onto the rope. Climb to the top of the rope before dropping off or you will fall into Trouble Three. Before you jump to any ledge, hit the eye. When you

# CALIFORNIA GAMES.<sup>TM</sup> BRACE YOURSELF FOR A NEW STATE OF INTENSITY.

It ain't beach blanket bingo.

These are radical games. Games that take the honorable tradition of *Summer Games™ I and II*, *Winter Games™*, and *World Games™*, wax it down and load it on the roof.

Try shredding the face of a totally tubular wave. Join the airforce in a BMX bike race. Screech around on skates and then rocket off the skateboard ramp.

You'll be playing for sponsors like Ocean Pacific, NHS Santa Cruz, CASIO, Costa Del Mar, Kawasaki, and Spinjammer. For trophies and an overall championship.

So get air. Go crazy. Welcome to the state of California.

Surfing. A sport invented by half-baked Banzais with a fondness for ripping, grinding, and shredding.

## ENTERTAINMENT

reach the three chains, hit the eye again. Pull the first chain, then the second, and then the third. If this doesn't open the magic wall, try another combination. Make sure you hit the eye after each try. When you open the magic wall, jump across the hole and stand in the depression; you will receive the Fireball.

★ **Black Knight One:** Jump onto the closest rope and work your way to the ledge on the upper left of the screen. Place your arm at a 45-degree angle so that the apexes of your Fireballs' arcs pass just under the top of the screen. When the Gargoyle comes, throw Fireballs with your arm in the position described above. To complete the rest of the screen, you must work your way from one safe ledge to the next, waiting for the Gargoyle and killing it at each ledge. Shoot the guards whenever you have to move past them, lest they shoot you first while you are climbing ropes.

—DAMON OSGOOD  
and DAVID LANGENDOEN  
New York, New York

**GRIDIRON!** (Bethesda Softworks/Electronic Arts). One to two players con-

trol offensive and defensive squads of their favorite teams, calling the plays and then controlling key players to see their plans being accomplished. (Amiga)

★ **Practice, practice, practice!** The only way to win this game, against either another player or the computer, is to perfect your moves, learn the plays, and then polish them until they become second nature. None of this "look-at-the-player-card" stuff. If you want to gain lots of yardage, get your timing right on those long passes. If short gains are needed, make sure the ball carrier is going to the right place.

★ **Design your own plays.** It'll drive the computer crazy! The program has been set up to combat preset plays of certain types. If you can design your own plays using strategies the computer will have to figure out, you may have discovered the key to success. The plays will work against humans if the computer can be outfoxed, too. Draw the plays on paper, try to solve them mentally, and if you think they'll work, go for it.

—JAMES DELSON

**OGRE** (Origin Systems/Broderbund). This strategy game is adapted from a board game of the same name. In the next century, warfare has become a nightmare worse than anyone ever could have imagined. Fighting takes place on nuclear battlefields where warriors—using such high-tech weapons as sophisticated tanks, rocket launchers, ground-hugging Hovercrafts, and artillery pieces—face their ultimate enemy, a massive weapons platform known as OGRE. This super tank—nuclear-powered, heavily armored, and capable of destroying entire armies—is trying to obliterate human-operated command posts. This game

pits one to two players against each other or lets a solo player (playing either the OGRE or an army) determine the future. (Apple, C 64/128)

★ The best vehicles at the defender's disposal are the GEVs, which can sting the OGRE without being confined to its main and secondary armaments. (Don't worry about the missiles.) In order to learn the potential uses of the free-ranging Hovercraft—which can move twice each turn—play several games against yourself. Practice “stinging” and retreating out of range, remembering that while the OGRE can move only three hexes, its armament can cripple or kill your vehicles from up to five hexes away.

★ As the OGRE, don't waste your missiles! If you use them too early against unworthy targets (GEVs and missile launchers), you won't have them at your disposal when you really need them against the howitzers. And *always* save a missile for the command post. Even without your treads, you can still attack the command post from five hexes away.

★ As the OGRE, don't bother wasting your time and treads on the

puny units that stand in your path. Go around them. You can always go back and stomp them, but your goal is to obliterate the command post; so don't sidestep unless it's part of your plan.

★ For both gamers, play balance can be achieved in various ways. Our favorite is to alter the initial ground setup, allowing the defender to establish a specific number of obstacles to help block the OGRE's path.

## NEW CONVERSIONS

**Amnesia** (Electronic Arts). Now available for C 64/128. Already available for Apple. Reviewed in March 1987 issue.

**Bop'N Wrestle** (Mindscape). Now available for IBM Personal System/2. Already out for Apple, Atari 800/XL/XE, C 64/128, and IBM PC/PCjr. Reviewed in October 1986 issue and *Software Review* 1987.

**Balance of Power** (Mindscape). Now available for IBM Personal System/2. Already out for Apple, Amiga, Atari ST, IBM PC/PCjr, and Macintosh. Reviewed in April 1986 issue and *Software Review* 1987.

Try building a maze of craters or a wall with only one place to escape through. Then use as many howitzers as you can to knock out the OGRE's treads before you close in to finish it off with some GEVs.

—JAMES DELSON

## SEND US YOUR HINTS—AND WIN A FREE GAME!

Don't miss the opportunity to share your original game hints and tips with other readers. Submit entries to: Entertainment Editor, FAMILY & HOME-OFFICE COMPUTING, 730 Broadway, New York, NY 10003. Include your name, address, telephone number, a short description of the game, and the brand and model of computer you own. If your tips are selected for publication, we'll award you a new game for your computer. We reserve the right to edit submissions for accuracy, clarity, and length. Unfortunately, we won't be able to acknowledge each submission.

EDITOR'S NOTE: Titles listed for the IBM PC/PCjr will also run on many IBM compatibles. Owing to the proliferation of compatibles, check with the publisher of the program or your dealer for compatibility. “Apple” refers to the Apple II series. ■

# FAMILY COMPUTING<sup>®</sup>

## CHRISTMAS WISH BOOSTS FAMILY ENTERPRISE

### The Dial Family of West Frankfort, Illinois

BY JEANNE DIAL

*Next month, this new department will feature answers to readers' computing questions.*

There were some raised eyebrows among our acquaintances and families when we bought our first computer in 1982. We even questioned our own intelligence for a few weeks, but we no longer doubt that it was one of the best investments of our lives. Now, we have five computers, and we use them for our rental business, in my husband Bob's coal mining job, in my part-time teaching positions, for the children's education, and to pursue our hobbies.

#### WHAT A GUY!

I began to see the value of computers and word processing in 1982, while I was finishing my education degree at Southern Illinois University in Carbondale, so I asked for a \$99 Timex Sinclair for Christmas. Bob took my wish to heart and began researching the field, talking to experienced computerists and reading library books. At that time, computer owners were scarce, and even the computer salespeople we spoke with weren't aware of the computer's potential in the home. (That's changed dramatically in the past five years; we have lots of friends with computers and have found salespeople to be much more knowledgeable.)

But instead of the \$99 Timex Sinclair I'd asked for, Bob toted home an Apple II Plus with dual disk drives and an Epson MX-80 dot-

The Dial family (clockwise, from top): Bob; Jeanne; Laura, 8; and Matt, 12.

matrix printer. He paid \$3,800 for the entire system, and I nearly had a coronary.

That was four years ago. We've since added an Apple IIe, an Apple IIc, an IBM PC XT, and a Zenith 181 laptop to our collection for home and business use.

#### TAKING CARE OF BUSINESS

We began adding computers to our lineup with the opening of our two rental stores, Dial Rentals & Sales Inc., in West Frankfort and Benton, Illinois. In the beginning, we were able to manage our bookkeeping, personnel records, and filing on the Apples, using *VisiCalc* and *AppleWriter*. As the stores expanded, the volume of business outgrew the floppy-disk system. We found we needed the memory and speed of the IBM PC XT with a 20MB hard disk; we also converted our records to Peachtree's *The Complete Business Accounting System*.

We make all the necessary signs, labels, and banners for the stores with the XT and Broderbund's *The Print Shop*; Bob has added the IBM-compatible Zenith to handle general ledger work. In addition to the first Epson printer, we have an Epson MX-100 and a Brother HR-15 letter-quality printer.

#### COMPUTING TOGETHER

The entire Dial family uses computers daily. Computing has become

Bob's number-one hobby; he reads the documentation on new software and is my computing instructor. Bob also uses the computer to compile weekly reports for his job as maintenance foreman for the Old Ben Coal Company, and he even designed a database that would tell him the parts he'd need for specific maintenance jobs. He also has realized all the ways a computer can be used in the business.

My computer-fanatic husband and I have a son with the same characteristics. Matt, who is 12 years old, saved his money last year and was able to buy an Apple IIc, which he installed in his room. Each afternoon at four o'clock, you can hear the *beep-beep* of the computer and the shouts of Matt and his friends as they play games.

Matt wrote a short program this year to check his math homework, and his sixth-grade teacher recently made Matt his aide in the school's computer lab. Our daughter, Laura, 8, and Matt both budget their weekly allowances and keep their totals on the computer. Laura is completely comfortable with computers, and, like her brother, is sometimes asked to help the other children in the computer lab.

We entertained ourselves with the laptop on a recent vacation trip to North Carolina: I tried to learn *WordPerfect* (WordPerfect Corp.) while Bob was driving; Bob worked on his inventory program in *dBase III Plus* (Ashton-Tate) while I drove; and Matt used *dBase III Plus* to enter the license numbers and models of cars on the road when he could get the computer away from us!

#### CHANGING WITH THE TIMES

Over the past four years, drastic improvements have been made in software, making it more practical and user-friendly. Still, many older programs are limited only by the user's imagination and patience. Computer systems can be purchased for much less than we paid for our first system, and more computer users, magazines, and salespeople are available for help and support. I knew all along it would happen this way when I asked for a \$99 computer for Christmas! ■

#### SEND US YOUR STORIES AND QUESTIONS

Please mail computing questions or family profiles to: FAMILY & HOME-OFFICE COMPUTING, Attention: Family Computing Department Editor, 730 Broadway, New York, NY 10003. Profiles should be no more than five pages, double-spaced and printed or typewritten, and demonstrate your family's use of the computer for a range of applications, such as working at home, personal finance, home management, education, and entertainment. If your essay is selected for publication, you will receive a software package for your computer.

# EASY Working™

From Spinnaker

**E**asy Working™ is a line of high quality, low cost personal productivity programs designed for the person who wants to spend time doing useful work, not struggling with complex computer commands and long manuals. Each Easy Working product is carefully designed to work alone or in combination with other members of the Easy Working family.

On-screen menus provide "at-a-glance" summaries of the features of the program. When you select a feature from the menu bar, a menu drops down to show all of the available options. Every command available is displayed in the drop-down menu. You will find that you will spend less time getting to know the program and more time on your projects. And since each member of the Easy Working family uses the same command structure, once you learn how to use one, you'll find a head start on learning to use the other two. But don't be fooled. Easy doesn't mean incomplete. Easy Working products are full-featured.

#### **Easy Working™: The Writer™:**

Complete word processing features allow you to create your letters and reports and arrange them to suit your needs, includes 100,000 word spellchecker. Editing functions include insert, delete, cut, paste, and copy.

#### **Easy Working™: The Filer™:**

A multi-purpose program which simplifies the storage, selection, and reporting of information. Maintain or create mailing lists, inventories, club memberships, and other types of information.

#### **Easy Working™: The Planner™:**

The Planner provides you with all of the professional features of an electronic spreadsheet. Extensive mathematical operations easily create your spreadsheet for budgeting, tax calculation, expense reports, financial statements, and other applications.

The Writer, The Filer, and The Planner fully integrate with each other.

## NEWS, OPINIONS, QUOTES, AND RUMORS ABOUT YOUR FAVORITE COMPUTER

### APPLE

BY CHARLES H. GAJEWAY

In one of its most sweeping and varied product introductions ever, Apple showed seven new products at MacWorld Expo in Boston last August. "Today is my most exciting day at Apple since we introduced the Macintosh in 1984," said Chairman and Chief Executive Officer John Sculley, who delivered the keynote address to a huge throng of Apple lovers. Over a three-day period, an estimated 26,000 people each paid \$15 to crowd the exposition center and gawk at the wares of more than 260 exhibitors.

"At the time of MacWorld Expo in 1985, no one was saying anything very nice about Apple," said Sculley. "But coming here that August and seeing all you enthusiastic people restored a large measure of my self-respect. You are as much responsible for Apple's success as anybody."

Indeed, for many observers, this exciting event seemed to mark the culmination of a long uphill climb to respectability for Apple's favorite machine, the Macintosh. It is now solidly entrenched as a computing standard that users and developers can count on.

**Apple vs. IBM.** Alluding to the "other" operating system, Sculley said, "Apple and IBM are still on very different journeys and will be at the turn of the century. The epicenter of the industry has moved from the mainframe to the network and to individuals. From that perspective, the mainframe is a marvelous peripheral. [A roar of laughter.] But IBM's PS/2 line will still be a peripheral to the mainframe in the year 2000."

**HyperCard.** The most exciting of Apple's new products is *HyperCard* (1MB required, hard disk recommended), erector-set software that gives people the tools to build flexible information systems. *HyperCard*, which comes bundled with all new Macintoshes (available for \$49 for others), uses the index-card metaphor. Users can create—through pull-down menus and a straightforward programming language—"stacks" of index cards that mix

A screen from the Address stack of *HyperCard* with clock and customized buttons.

text, graphics, sound, and animation. These cards can be linked together and accessed quickly by clicking on-screen buttons.

Chief developer Bill Atkinson (also known as Mr. *MacPaint*) was distributing a disk of *HyperCard* goodies at the show in an effort to launch a nationwide shareware movement of "stackware." He and others at Apple expect that the simple programming language, *HyperTalk*, will encourage nonprogrammers—be they professors, musicians, or baseball fans—to create their own information systems.

"They say that real men don't program in Pascal; they program in C or Assembly," said Jean-Louis Gassée, Apple's senior vice president of research and development. "My prediction is that real men—and real people—will program in *HyperTalk*."

**MultiFinder.** Operating System/2 may promise multitasking (the ability to run two or more programs at the same time) to the MS-DOS world, but Macintosh offers a type of multitasking today—with *MultiFinder 5.0*. This latest version of *Finder*, distributed with all new Macs (\$49 for others), is capable of running concurrent Unix, MS-DOS, and Macintosh applications. Using *MultiFinder*, you can laser print or transmit a file in background while working on another task. Finally, you can cut-and-paste between documents, so that you can take part of a Lotus 1-2-3 worksheet and paste it into a *Microsoft Word* document.

**AppleFax Modem.** The AppleFax Modem (\$699) is an external device (with two pieces of software included) that looks much like a mo-

dem. And in one sense it is a modem: it can send files at up to 9600 baud to other AppleFax Modems. But the device can also send or receive facsimile files from a network of more than two million Group Two or Group Three facsimile machines around the world (see "Facsimile Phones" in this issue). Any Macintosh file can be converted into a facsimile file with software that comes with the AppleFax Modem.

As an added touch, the AppleFax Modem uses the same fonts in the new Apple ImageWriter LQ printer (\$1,399), a wide-carriage 27-pin printer. These fonts can be sent to any facsimile machine; received transmissions can be printed out on the LaserWriter, ImageWriter, or ImageWriter LQ printers.

Apple's other new products—the Macintosh II EtherTalk Interface Card (\$699), AppleShare PC (available beginning the first quarter of 1988), and AppleFile Exchange (included as system software with all new Macs)—are all "connectivity" products designed to enhance the sharing of files between different networks and computers.

CHARLES H. GAJEWAY can be reached on CompuServe (ID: 73357.3577) or on GENie (ID: C GAJEWAY).

### ATARI

BY JOHN J. ANDERSON

Whatever happened to *Microsoft Write*? This word-processing package was previewed with great hoopla several months ago, yet a finished package has yet to see the light of day. Very nearly finished now, we hear, though a few small bugs still need to be stamped out.

**Atari PC.** By the time you read this the first Atari PCs should have reached these shores. The new computer has more power and features than the IBM PC, says Sam Tramiel, president of Atari. Designed around the Intel 8088-2 chip, the switchable system performs at either 4.77MHz or 8MHz and has 512K, expandable internally to 640K.

Atari is the first IBM PC-compatible manufacturer to announce

# MACHINE SPECIFICS

support for the EGA graphics mode as a standard feature. Other graphics modes supported by the custom-designed graphics chip are CGA, IBM monochrome, and Hercules graphics card. Therefore, you will be able to use a range of monitors without adding interface cards.

The Atari PC has a built-in Centronics parallel port for printers and an RS-232 serial port for modems and serial printers. It will be sold with a detachable IBM-style keyboard, mouse, and mouse port and will be bundled with GEM desktop software from Digital Research and MS-DOS 3.2. The PC will be sold through mass merchants and computer specialty stores. The system—including a computer, disk drive, and monochrome monitor—is priced at \$699. The computer and disk drive alone will sell for \$499.

JOHN J. ANDERSON can be reached on CompuServe (ID: 76703.654).

## COMMODORE

BY SHAY ADDAMS

What's my beef? Programs that ignore the 128's extra memory (this refers to programmers and decision makers at the software companies). It didn't bother me until I talked to Robert Woodhead, who said the conversion of Wizardry (Sir-Tech) for the 64 and 128 will recognize the 128's extra memory and use it as a RAM cache to minimize disk access. Not only that, but it will do the same for a 64 with a RAM expansion. Woodhead also says that the operating system has boosted disk access by 5.2 times the normal speed!

Now if a game can do that, why not an application program? A database that frequently accesses the disk is the first thing that comes to mind. Most software is still designed for the 64 and doesn't take advantage of the 128's increased memory.

**One Million 128s.** Such a development strategy may have been adequate last year when the number of 128s in use was questionable, but Commodore now says that a million 128s have been sold worldwide. So I don't want to hear any more excuses containing the phrase "no installed user base." Maybe a letter-writing campaign is in order. If you've never used the mail-merge option on your word processor, this might be a good time to give it a shot.

**Art Studio.** While we're in the studio, let's check out the latest art software from England, Firebird's *The Advanced Art Studio*. This two-disk program (\$40) provides three levels of magnification, 16 user-definable brushes, and a font editor with nine character sizes and text-oriented special effects. All work is done in windows, so the menus are always present. It will even print your creations sideways, if necessary, and do screen dumps.

Support is built in for all major printer drivers, and you can define parameters for your own driver if necessary. You can use a KoalaPad, a joystick, or a Datex mouse for input and for making selections from pull-down menus.

**Amiga 2000.** As I wrapped up this column, Commodore's Jim Gracely told me all the hardware that the company has been promising this year is a reality. The FCC has finally granted approval for the Amiga 2000, and workers were nailing machines together on the assembly line as we spoke (honest, I could hear them in the background!). The Amiga 2000 should be on store shelves by now.

SHAY ADDAMS, editor and publisher of Questbusters, an adventure-game newsletter, can be reached on CompuServe (ID: 72267.601) or on QuantumLink (ID: JBCALMER).

## IBM

BY HENRY BEECHHOLD

With Macintosh-based desktop-publishing systems setting the pace and the standards in this madly competitive segment of the micro market, can IBMers hope to rise above second-class citizenship?

Last month, I mentioned IBM's announcement of its Personal System/2 *SolutionPac*—a desktop-publishing system. But since *SolutionPac* works only on the Model 30 (the other PS/2 models can't drive the IBM laser printer, but the XT and the AT can), it cannot begin to keep up with the Mac's dazzling operation. So there's no hope, then?

Wrong. My tarot cards tell me that as soon as *SolutionPac* acquires a little history, IBM will adapt the interface so that the laser printer runs on the models 50, 60, and 80.

With a well-tested publishing package running on a truly new and

fast machine, IBM desktop publishing will have come of age. Such a system will cost much more than a cheese sandwich, but for the home-based printing business in search of increased productivity with IBM, the investment will be worth it.

**Shaky Writing Skills?** *RightWriter* (RightSoft Inc.; \$95, plus \$4 shipping) is a friend you can lean on. Subtitled *The Intelligent Grammar and Style Checker*, the program analyzes your text files according to the Flesch-Kincaid Readability Rules for plain, simple English. It produces a marked copy of your original file, which can be viewed on the screen and/or printed out.

But you make the actual changes according to your best judgment. For example, *RightWriter* will indicate every instance where the passive voice is used and include these occurrences in the statistical summary of your work. But not all uses of the passive voice are inappropriate. You must decide.

The program will work with plain ASCII files as well as special files produced by various word processors. In addition to catching grammatical and stylistic problems (if, indeed, they are always problems!) and peculiar uses of uppercase and lowercase letters (as in *RightWriter*, for instance), the program will spot missing punctuation marks and presumed misspellings. The misspellings appear in a "words to review" list that includes words the program doesn't recognize, as well as colloquial and improperly used words.

At the end of the analysis cycle, *RightWriter* gives you a summary of your writing in several categories. The program works well and can be most helpful to anyone anxious to write readable, grammatically correct, properly punctuated documents. It has relatively little value, however, for highly skilled writers.

HENRY BEECHHOLD is the author of *The Brady Guide to Microcomputer Troubleshooting & Maintenance* (Brady Books, Prentice Hall Press, New York).

## MS-DOS

BY STEVE MORGENSTERN

With all the interesting add-ons and plug-ins available for your computer, why spend money on a new keyboard? Maybe typing on your factory-equipment keyboard feels like

## MACHINE SPECIFICS

tapping on mashed potatoes. Perhaps you suffer from the NUM LOCK blues—that sinking feeling that hits every time you have to press the NUM LOCK key to switch from entering figures on the numeric keypad to using a cursor movement key, and vice versa. Or maybe you just need a faster way to move the cursor through a spreadsheet, a database, or even a graphics program. Here are some suggestions.

**Separate Cursor Keys.** Instead of replacing your whole keyboard, you might want to add Keypatch-10 (\$90) from Genest Technologies. This separate minikeypad attaches to the top of your existing keyboard, adding a set of cursor keys that function even when the numeric keyboard is engaged. Installation couldn't be easier—one end of the unit's Y-connector plugs into the computer keyboard socket, and the other accepts your keyboard plug.

**Get Smart.** WICO, a leading joystick manufacturer, produces a replacement keyboard that isn't just fun and games. The Smartboard (\$400) features a built-in trackball plus user-programmable function keys. The trackball is a very fast way to move the cursor around the screen. Rolling the ball simulates a series of rapid-fire cursor-key presses, so the Smartboard doesn't require any special software. The function keys let you store a string of keystrokes in battery-backed memory and play them back with a single keypress. Unfortunately, there is no way to use the trackball as a substitute for a mouse.

**Key Tronic.** The KB 5153 Touch Pad Keyboard (\$399) from Key Tronic weighs a ton. But it also has a heavyweight special feature—a unique multipurpose 3.5-inch-square touch pad. In cursor-key mode, you can move the cursor around the screen by running your finger or a stylus across the pad's surface. Load the mouse-driver software and the touch pad emulates a mouse and can be used with programs that accept Microsoft-compatible mouse control.

The touch pad also can be subdivided into four, nine, 25, or 36 programmable function keys (overlays are provided to indicate where each "key" is located). You can even combine function key and mouse modes simultaneously.

STEVE MORGENSTERN can be reached on CompuServe (ID: 72545.606).

## TANDY

BY STEPHEN MILLER

Mark Eppley had faith in the Tandy laptops when others questioned their potential in that market. After six years, Traveling Software, his company, has carved out a niche for itself by supplying quality add-ons to the Tandy portables. The company's Lap-Link cable-and-software link helps transfer files from desktop computers to the new Tandy LT 1400 and other portables. But its latest product is one that will gladden the hearts of those diehard Model 100 fans.

**2MB Model 102!** The Booster Pak will boost the memory of a 100 or a 102 to an enormous 2MB. The pack is a box that lets you add as much or as little power as you need. The basic unit (\$429) comes with 136K of additional memory. Through December 31, *Desk-Link* will be included. This ROM software allows for the rapid transfer of data files to and from MS-DOS machines.

Booster Pak has additional slots so that you can add more memory, a 1200-baud internal modem (\$199), a rechargeable NiCad battery (\$69), and all Traveling Software's ROMs (see review of *Sardine* in last month's issue). The Booster Pak weighs only 10 ounces and attaches to the bottom of the 100 or the 102.

**EX DOS Update.** Tandy is selling DOS 3.2 as an upgrade for the EX (\$30; Cat. No. 25-1170). MS-DOS 3.2 certainly has some advantages over 2.11, the version supplied with the EX. But it makes most sense if you have added memory, a second disk drive, or a hard disk. If you're primarily using *Personal Deskmate* and running games, the upgrade seems to me to be gilding the lily.

**CoCo 3 Workout.** *Pyramix* (Spectrum Projects; \$30, plus \$3 shipping) is the first arcade-style game

### PHONE NUMBERS

A.T. & T. Liquidators (714) 751-2667; Apple Computer (408) 973-2222; Atari Corp. (408) 745-2000; Commodore Business Machines, Inc. (215) 431-9100; Firebird Licensees, Inc. (201) 444-5700; Genest Technologies (714) 547-0880; IBM (800) 447-4700; Key Tronic (509) 928-8000; Microsoft Corp. (206) 882-8080; Orphanware (216) 882-4720; RightSoft Inc. (813) 952-9211; Sir-Tech (315) 393-6633; Spectrum Projects (718) 843-4288; Tandy Corp. (817) 390-3011; Traveling Software (206) 483-8088; WICO Distribution Co. (312) 647-7500.

I've seen that really puts the CoCo 3 through its paces. This game is the Colorventure version of the arcade favorite *Q-bert*. The game opens with the entire game board dropping from out of nowhere and slowly bouncing to a halt. The colors are sharp and crisp, and the sound rivals arcade quality. *Pyramix* is a well-done translation and should keep you gamers happily occupied for hours. It's available from Spectrum Projects, P.O. Box 264, Howard Beach, NY 11414.

STEPHEN MILLER is a computer consultant and journalist.

## ORPHANS

BY PATRICK SPERA

For those of you who can't find any discount software, try A.T. & T. Liquidators. They seem to have something for every microcomputer ever made—CP/M, TRS-80s, Timex, TI—it doesn't seem to matter. The prices are incredible—an Osborne modem for \$30, and three TI-99/4A programs for \$25, just to choose a couple of steals.

Just send A.T. & T. a self-addressed, stamped envelope (to 2640 South Harbor Blvd., Santa Ana, CA 92704) and indicate what computer and operating system you have. A.T. & T. will send you a price list of hardware and software available for that machine. And dealers, if you can't wait for people to follow my advice and raid your old stock, then call A.T. & T. and ask for Art. You can dicker with him!

**512K ADAM.** John Lingrel has been busy this past year! Orphanware (P.O. Box 324, Canal Fulton, OH 44614) is now carrying his 512K memory board. This replaces the Coleco 64K expansion board. Before replacing yours, you need a printer interface (\$30 with expansion board from Orphanware) or an addresser (\$17.50).

Depending upon how you set up the memory, you can use the extra memory as a RAM disk. The price is \$285 for the 512K version; a 256K version is also available for \$165; the 128K version costs \$115. People who already own the 256K board can upgrade to 512K for \$120.

PATRICK SPERA is sysop of the Computer Club Forum on CompuServe (GO CLUB), a meeting place for owners of orphaned computers.

# "HeadStart™ is the complete computer system even I can pin down — at a price no one can beat!"

"King Kong" hates to get beat—even when buying a computer. But he found that systems advertised as "complete", weren't. One had limited expandability. Others charged extra for a second drive or monitor. Or extra for software.

Then HeadStart™ by Vendex™ entered the ring. HeadStart is the first fully IBM® XT™ compatible computer system that makes *standard* all those features others charge extra for. All for less than \$1,000.

"King Kong" Bundy  
Heavyweight Wrestler

## HEADSTART™

by **VENDEX**

It will bring out the genius in you!

### A TRUE HEAVYWEIGHT CONTENDER

HeadStart comes with a dual speed 8 MHz Turbo 8088-2 microprocessor. Two 5-1/4" disk drives. 512K of RAM (expandable to 768K). An "AT" style keyboard. 3-in-1 CGA/Hercules graphics card. 12" TTL monochrome or optional 14" RGB color monitor. Parallel, serial, light pen, mouse and dual game ports. Plus, seven expansion slots.

HeadStart's software package includes a word processing program, a data base manager, a spreadsheet program, and Executive System's HOT™ POP-UP SERVICES.

### NO WRESTLING WITH MANUALS

HeadStart comes complete with the revolutionary **HeadStart Operating Environment** that makes computing easier for beginners and buffs alike.

Simply by making a choice on the plain-English menu screens, novices can learn how to use their computer, access software and run MS/DOS commands.

Just as simply, experienced users can perform complex tasks without looking up manuals. HeadStart can provide instant access to DOS utilities and configuration modifications, and even execute the last 16 commands in sequence!

### TAKE THE CHALLENGE

Check HeadStart's standard features against those of any other "complete" computer system. For only \$995\*, HeadStart is the first complete package absolutely nobody can beat!

# Strokes C

If you haven't been to Europe or taken a world tour lately, you may not have heard of AMSTRAD. So, let us introduce ourselves.

AMSTRAD is the British company that makes the best selling computer in Europe.\* We even out-sell IBM. And worldwide, over 2,000,000 AMSTRAD computers have been sold — not to mention all the AMSTRAD printers and word processors in use.

Now AMSTRAD is coming to America. And you'll soon see why AMSTRAD is making the competition very nervous.

## Why buy your computer in expensive little pieces?

With most computers, expanding capabilities means spending a fortune for add-ons. Not with AMSTRAD.

Both the PC1640 and the PC1512 come with additional ports *built-in*. That means no expensive brain surgery is required when you're ready to expand.

AMSTRAD computers also allow you to upgrade graphics capabilities — also without brain surgery. The PC1640 has monochrome (Hercules), CGA and EGA capabilities built into a single motherboard. So, to make your work look better, simply install a more sophisticated AMSTRAD high quality monitor. (Starting to see why AMSTRAD is so popular?)

## Everything you need in two manageable boxes. Everything.

Naturally, both models are IBM compatible. They'll run virtually all IBM software for every business or personal need you can think of. And not only that, we've built in

the boards necessary to run mouse-driven, windowing GEM® software to create spectacular graphics. We even give you a mouse.

Of course, we realize that's not everything you need to start computing. That's why both computers come with lots of software — MS DOS V 3.2, GEM® Desktop, GEM® Paint, LOCOMOTIVE Basic and more.

Imagine. Virtually everything you need to start computing within minutes after you open the box. (A smart way to buy a computer, don't you think?)

## Extraordinary printers, too.

AMSTRAD gives you a choice of two brilliantly designed printers — the DMP 3000 and the DMP 4000. Both offer IBM compatibility and a list of standard features other printer manufacturers call options.

\*Source: International Data Corp.

# Of Genius.

(We're making our competitors nervous in that department, too.)

## What if you don't need a computer?

If you just want to express yourself in plain English, but don't want to learn the language of computing, you'll love AMSTRAD's 9512 Word Processor. It's incredibly easy to use, comes with powerful built-in software to perform a variety of tricks, a large, high-resolution monitor — and a letter quality daisy-wheel printer. To create a bestseller, all you need to add is a great plot.

## The Coup de Grâce.

Because of AMSTRAD's ingenious engineering and integration of traditionally optional features into our products, our prices are significantly less than you'd ever expect for such performance. In fact, you

can buy a complete AMSTRAD computer system, for less than \$700.

Add a printer and the price is still less than a thousand dollars. Or buy a complete word processing system for less than \$800.

## We may not become as famous as the Beatles, but...

With more than 700 dealers in America already (and the number is growing fast), it's no wonder AMSTRAD is quickly becoming famous for putting high performance within reach of thousands of businesses and personal users.

To find out more about putting brilliant performance in your hands, send in the reply form for the name of your nearest AMSTRAD Dealer.

You'll see for yourself, you don't have to be an Einstein to be a genius. Just smart enough to buy AMSTRAD.

Please send me the name of my nearest AMSTRAD Dealer:

1985 - High-performance Jet flight simulator for the IBM, Commodore 64, and Apple II computers

1987 - Expanding Scenery disk coverage; East Coast, Japan, & Europe

1982/1983 - Microsoft Flight Simulator & Flight Simulator II

1986 - Flight Simulator II for the 68000 computers

1979 - 3D graphics applied to the original FS1 Flight Simulator for the new Apple II and TRS-80 computers

1977 - SubLOGIC's 3D graphics package in BASIC and M6800 Assembly Language

## Ten Years of Technology and Dedication

Some say our technology has helped us define the state of the art in flight simulation. We believe our ten years of dedication have gotten us where we are today.

SubLOGIC's first black & white 3D graphics routines, developed in 1977, paved the way for our introduction to flight simulation and aerial combat gaming theory. Our second-generation Flight Simulator II was so well conceived that even we find it difficult to improve upon. Jet's spectacular land and sea battle scenarios set another classic milestone in state-of-the-art simulation gaming. Scenery concepts incorporated into SubLOGIC flight simulation products right from the start continue to evolve as we introduce new, more beautifully detailed areas of the world to explore. And coming in 1988 - a flight control yoke for even more realism!

We invite you to help us celebrate our first decade of success, and share in our anticipation of the next ten years to come. SubLOGIC tenth-anniversary promotional shirts and posters are available at your dealer or directly from SubLOGIC. See your dealer, or write or call us for more information.

BY DAVID HALLERMAN AND NICK SULLIVAN

**H**ave you ever bought a stereo system? Did you opt for a relatively inexpensive stereo rack system that came ready to plug in and turn on? Or did you mix and match separate components from different manufacturers—spending both more money and time in the process?

Shopping for a computer involves similar decisions. You can find full systems for less than \$500, but you can also spend \$5,000 to build a customized system. As with a stereo system, you should know what software you want to run and the size of the disk it comes on before you buy. Do you want a portable system, one that looks good in your den, or a big box that works like a team of mules?

Beyond these obvious similarities, other basic consumer principles apply to both shopping experiences:

Never buy based solely on price. Everyone wants a deal, obviously, but the \$200 or \$500 you save may come back

to haunt you if the system doesn't perform up to your expectations.

Know beforehand how you want to use the computer and who will use it; this might dictate your choice.

Ask about support. How good is the warranty, how far do you have to ship the box if the computer breaks, and how stable do you judge both the vendor and manufacturer to be?

Finally, trust your instincts! You've bought goods before. Do you like the way the computer looks and feels? You're the one who will be using it, probably on a daily basis.

### THREE MAJOR GROUPS

To help guide you through the sometimes confusing computer-shopping maze, we've divided computers into three major groups.

**CLASSICS.** Old, established, and time-tested, this group is particularly strong for games and education and is good for personal finance, filing, and writing tasks.

This group includes enhanced versions of the original popular computers—the Apple II, the Atari, the Commodore 64, and the Tandy Color Computer.

**MOUSE MACHINES.** These sophisticated computers are graphics-oriented, and all come with mice and elegant operating systems that allow you to point-and-choose from menus and icons. This group includes the Amiga, the Atari ST, the Apple IIGs, and the Macintosh.

**MS-DOS MACHINES.** There's a whole world of IBM-compatible computers that run MS-DOS programs particularly geared to business applications. With scores of machines to choose from, we've looked at more than a dozen IBM PC and XT compatibles, some with the traditional 5.25-inch drives, some with the newer 3.5-inch drives.

Begin your tour by reading the general remarks on each group and then the comments about the specific machines. Then refer to the "Computer Types at a Glance" chart for more details on the machines.

## CLASSICS

Why buy one of the old pros? The availability of much educational and game software—especially for the Apple II and Commodore 64—can make these machines good computing investments for your children. At this level, you can use a TV for a screen display, saving on system costs. Add monitors and these machines are powerful enough for personal finance, filing, and writing tasks. Finally, as the newer mouse machines and standard MS-DOS machines take over the market, you can find good prices on these older machines, and they're often bundled with a monitor and a printer. If you buy from a discounter, though, you can't expect any real support. However, so much information is readily available for these computers—in the form of books, magazines, and users' groups—that you may not need any support.

Why *not* buy a classic? You'll be bucking the trend—which is toward faster machines with more memory—and thus won't keep abreast of upcoming advancements in computer technology. And if you expect to use the computer frequently for business tasks, you'll spend as much to assemble a working system as you would for a more powerful machine, such as an Atari 520ST or the Tandy HX. Even then, you won't be able to run such popular business packages as Microsoft Word, Lotus 1-2-3, Excel, or dBase III Plus.

**APPLE IIe/IIc**

With any Apple II, you get the most popular computer in elementary and secondary schools, as well as the most businesslike of the old reliable machines. The Apple IIe has eight internal expansion slots, which make it easy to

soup up. While several slots must be used for such common devices as serial, parallel, and disk-drive interfaces (ports), other IIe slots can be filled with such extras as expanded memory (1MB or more), a hard-drive interface (a Macintosh-compatible Small Computer Systems Interface), a speech synthesizer, and a mouse port. However, given its age, the IIe is still relatively expensive.

The Apple IIC—a small, neat unit that's perfect for a small desk—comes with a built-in disk drive, a mouse port, and two serial ports (for a printer and a modem). But it has no slots. Your dealer, however, can expand the latest IIC to 1MB with an internal board.

**LASER 128**

This Apple II compatible is a cross between the IIC and IIe. Like the IIC, the Laser 128 comes standard with 128K memory, built-in ports along the back (although there are more of them, including a parallel printer port), and a 5.25-inch disk drive on the right side. Like the IIe, the Laser 128 has a slot that accepts standard Apple expansion boards. The only problem with the slot is that it's external, so that any board put into it will be exposed to dust and dirty fingers. Still, anyone interested in an Apple II should also look at the less expensive Laser 128.

**ATARI 130XE**

The 130XE is the latest of a long line of Atari computers that began with the Atari 400, and it's a lively machine. Other than games, however, we've seen far too few new programs for this aging line. But there are some solid, older programs available, such as the *Atari Writer Plus* word processor. The XE can serve as a reasonable beginner's computer, but compare it to the similarly priced Commodore 64 before buying; the C 64 offers more software.

**COMMODORE 64c/128**

As a first computer for a curious child of any age, the C 64c offers several virtues. Even after you add the necessary disk drive (and color monitor, if you don't want to use a TV), the price is less than \$500. And you'll be able to write, explore, and draw with your computer right away, since Commodore now bundles the GEOS (*Graphic Environment Operating System*) software along with GEOWrite and GEOPaint. (To take full advantage of this software, you'll probably want to add a mouse; the Commodore 1351 is \$50.) Also included is software for going on-line with the popular QuantumLink information service (a modem is required). A range of game and educational software is available, and much of it takes advantage of the C 64's alluring three-voice sound output. You'll also be able to buy productivity software that is relatively sophisticated, but limited by the speed and memory of the superannuated C 64. The C 64 has all the signs of a computer nearing the end of its life cycle.

Meanwhile, even though more than one million have been sold, the C 128 continues as somewhat of an afterthought for many software developers. Since it runs nearly all C 64 programs, and there are a lot more C 64s than C 128s out there, few software developers have taken advantage of the C 128's extra memory, faster disk drive, and higher resolution (both 40-column and 80-column displays). It's expandable to 640K with a 1750 512K RAM Expander from Commodore (\$200).

**TANDY COCO 3**

The third model in Tandy's Color Computer line—which will run almost all CoCo 1 and CoCo 2 software—is quite a robust machine. You start off with 128K and can expand to 512K. Included are composite and TV video ports and an analog RGB port capable of producing four vivid colors (out of 64) at a high 640 x 192 resolution (with RGB monitor). One of the available operating systems is called OS-9 (not to be confused with Micro-

soft's much heralded OS/2)—a powerful, but complex operating system capable of simultaneously running two or more programs. With all that and Radio Shack's far-flung network of stores and service centers, the latest CoCo seems like a good bet. Two drawbacks: there's much less good software for the CoCo than for the C 64 and Apple II, and there are very few programs written to use the CoCo 3's extra capabilities.

## MOUSE MACHINES

Why should you consider mouse machines? They're easier and more pleasurable to operate than other micros. They offer better graphics and better sound than the other computers listed here, with the exception of IBM's Personal System/2 series' graphics. Some of the most innovative software we've seen (such as *HyperCard* for the Macintosh and *Deluxe Video* for the Amiga) is available only on one of these computers. The mouse machines all use 3.5-inch disks, which store more and are more reliable than 5.25-inch floppies. Finally, they're very powerful machines that are capable of handling from one to nine megabytes of memory (standard).

Why not consider one of the mouse-based machines? We've heard people say that they don't like the physical act of moving a mouse, dragging it across a desk while holding down its button, nor do they enjoy the "toylike" graphic interfaces. They say they would prefer to simply use the keyboard. (Actually, that's why more and more programs on these machines offer users a choice of mouse or keyboard to accomplish the same functions.) Also, with the exception of the Mac, the mouse machines haven't been used widely as business machines, which means you won't be able to exchange files and disks as easily with MS-DOS computers.

When shopping, direct comparisons are difficult because none of these mouse machines are compatible with the others. Also, while they all use the icon-based, point-and-choose interface, each offers subtle yet real differences, such as the mouse's feel as you control the computer.

The minimum acceptable memory for any mouse computer in this group is 512K, but purchase a full megabyte if you can, since more and more programs either demand or make full use of the extra memory. Two disk drives are almost a necessity, and it's best if one of those is a hard drive.

**AMIGA 500/2000**

Both new Amiga computers are improved versions of the original Amiga 1000, which was introduced two years ago. On both, the colors are stunning and the sounds sophisticated. Some powerful and useful programs have been developed for the Amiga, particularly in

the growing area of desktop video. But the Amiga models we've seen aren't stable machines and sometimes crash for no obvious reasons. Yet, the Amiga is a powerful and exciting machine and the only microcomputer listed here that's capable of true multitasking.

As the entry-level machine to Commodore's Amiga line, the 500 combines setup ease with power. This one-piece unit contains 512K (easily expanded to 1MB internally), one 880K 3.5-inch disk drive, four-voice stereo output, and ports for a printer and a modem. Just realize when you're shopping that the low basic price doesn't include a monitor or a second drive. You can't really use your TV, either; to maximize the Amiga's output, you need an Amiga RGB monitor (\$400).

The boxlike Amiga 2000—which we've seen only in prototype—is built for expansion. It has nine slots—five compatible with the Amiga and four compatible with the IBM PC XT standard. For instance, you can run MS-DOS software by installing the Amiga Bridge board (\$500). And, because of its multitasking ability, you can run an MS-DOS program in one window and an Amiga program in another.

Of all the computers covered in this guide, Apple's Macintosh Plus and SE models carry the highest price tags. But for the extra money, you purchase a time-tested, mature computer (now almost four years old) that has a wealth of powerful, intricate, and sometimes fascinating, available software. One of the most amazing programs, *HyperCard* (see this month's *Machine Specifics*), comes with each new computer. It's easier to transfer graphics from application to application, or to merge text and graphics in word processors or desktop-publishing programs on the Macintosh, than on other computers.

Both models have black-and-white screen displays and a Small Computer Systems Interface (SCSI) that's designed primarily for connecting a hard-disk drive. The Plus is a closed system, but the SE has one expansion slot. For example, you can add a board for MS-DOS compatibility. Each Mac comes with *MultiFinder 5.0*, the new system software that allows you to have two or more programs open and on-screen at once. With the success of the Macintosh, Apple has become a solid company that should be around for years, and that's something to consider, too. Of course, if your work demands an MS-DOS machine, and you don't need all the graphic extras, then a Macintosh may be overpriced for you. A color monitor is also an option, but its considerable cost makes it unavailable to some people.

The latest Apple II (the fifth in the line) runs at nearly three times the speed of the Apple IIe and addresses up to eight megabytes—so it's potentially a solid business tool. It has a palette of 4,096 colors (256 available at one time), and its sophisticated 15-voice Ensoniq sound chip is capable of producing some of the best sounds we've heard on a computer. But the supplied 256K memory is woefully inadequate; most of the GS-specific software demands at least twice that. So you'll need to upgrade to at least 512K, and 1MB is recommended. And up to now, none of the GS-specific productivity packages we've seen, such as word processors or spreadsheets, match the machine's potential power. Until software developers provide such programs, you can use virtually all of the thousands of programs designed for the IIe and the IIc. Compare costs here carefully, though, since after you've added an analog RGB monitor, a second drive, and extra memory, the IIGS costs about as much as a Mac Plus.

The ST costs less than the other mouse machines; its pricing is also competitive with (and sometimes cheaper than) the classics'. The 512K version (520ST), with monochrome monitor and disk drive, can be had for less than \$500 discounted, and the color 1MB version (1040ST) is available for less than \$900. (When the forthcoming Mega ST hits the stores in volume, these prices may drop even further.) The color graphics are always impressive, and text is sharp and easy to read on a monochrome monitor. There's even a unique, built-in MIDI port, which provides the standard connector for music synthesizers and keyboards. The Atari user community is extremely active, and Atari itself sponsors exhibitions around the country. This helps make up for the fact that the ST's software base, like the Amiga's, is not nearly as broad as that of the Macintosh.

# MS-DOS MACHINES

Why buy an MS-DOS or PC-DOS computer? Just as English is the language of business, MS-DOS and PC-DOS (IBM's own similar operating system) are the operating systems of business (in the microcomputer world). More than 20 million MS-DOS machines are in use around the world, which means you're buying into a huge network of users. This guarantees an ample supply of software, assistance, and technical support. In addition, since MS-DOS computers have become virtual commodities, prices have plunged; you can often get more for your money than on other machines.

Why not buy an MS-DOS computer? The operating system is clunky, especially in this age of fluid mouse machines. And the color or monochrome graphics and sound don't compare with those of the mouse machines. While you can find plenty of good educational and game software, MS-DOS computers are primarily "of, by, and for" businesspeople.

Is there anything else to know before you make a decision? Yes! While all MS-DOS machines run the huge body of MS-DOS software, models from different manufacturers have distinguishing features. For instance, virtually all the models listed here use the Intel 8088, 8088-2, or 8086 microprocessor (see "Glossary"); more powerful MS-DOS computers use the Intel 80286 or 80386 microprocessor.

In the chart, we've broken MS-DOS computers into two general categories—those sold with 5.25-inch disk drives and those sold with 3.5-inch drives. In some cases, either the manufacturer or a dealer will sell a given computer with your choice of drive(s) and will even give you one of both. But this isn't always true and worth checking if the type of drive is a concern.

## THE 5.25-INCH-DRIVE MODELS

**AMSTRAD PC1512 DDM**

The Amstrad comes with *GEM* software (Digital Research's *Graphics Environment Manager*) and a mouse, which sets the Amstrad apart from most other MS-DOS computers. In addition to *GEM* programs, which are graphics-based, you can use the mouse with any standard DOS application. This mouse-oriented system is designed and sold as a color system, but it's also available as a monochrome system (with built-in graphics). The power supply is in the monitor, so if the monitor needs repair you're without a computer. The computer has a joystick port, a necessity for gaming, but it's not compatible with standard IBM-style joysticks. Two more drawbacks: the color display is not particularly sharp for text, and the keyboard is nonstandard and cramped. The Amstrad is not the best machine for word processing (at least for clumsy typists), but is otherwise a flexible and enjoyable system and a good value.

**COMMODORE PC-10**

Commodore has a computer in each of the three major groups. The Commodore PC-10, an established computer in Europe, is much less distinctive than the C 64 or the Amiga lines and doesn't appear to be as good a value. The PC-10 comes with both color and monochrome graphics built in. Included in the package is Borland's *SideKick*, the best-selling desk accessory that costs \$80 when sold separately. The PC-10 is large—not designed for a crowded desk. But the solid system unit is attractive and has a good keyboard.

**EPSON APEX**

Epson, once primarily a printer manufacturer, established itself as a computer maker with the reliable Equity line, which is sold through computer speciality stores. Now Epson is taking another step by selling its new Apex through mass-market outlets. The Apex, aimed at first-time users, comes with *PFS: First Choice* (Software Publishing Corp.), the integrated multifunction program. Thus, buyers will be able to start cracking right away. The Apex has only two expansion slots and thus isn't a machine with infinite expansion potential. It's best suited for families with general use in mind and for anyone who has a primary system at the office but wants a computer at home to complete tasks started elsewhere.

**EPSON EQUITY I PLUS**

The reason to choose an Epson Equity I Plus over an Epson Apex is expandability. The Equity I Plus delivers five slots compared to two on the Apex and includes a

serial port, which is not standard on the Apex. The Plus runs at a top speed of 10MHz, which is 25 percent faster than the Apex's. Neither computer, however, includes a monochrome graphics adapter. The whole Equity line (including the II and III Plus) has a clean attractive design, a good keyboard, a small footprint, and the backing of an established company.

### KAYPRO PC

Ever since its Kaypro II transportable computer, Kaypro has been known for providing reliable workhorse computers and good values for the money. That's still true with the Kaypro PC, which comes with a ream of software (including *WordStar* and the *Word Finder* thesaurus) to start you along. The distinguishing feature of this PC is its size; its interior is positively barnlike. Thus, the Kaypro isn't suited for small desks. But it's ideal if you're the type who likes to continually plug in new cards. Kaypro also sells a large-screen monitor, the Kaypro Laser Printer, and *Ventura Publishing* as pieces of a desktop-publishing system.

### LEADING EDGE MODEL D

The Model D (the "D" stands for Daewoo, the giant Korean manufacturer) has been on the market for more than two years now and has always been a good deal. The new version is faster than the original, but not much else has changed. The computer itself is compact and stylish, and the keyboard is one of the best around. It does not, however, have separate cursor and numeric keypads, as many keyboards do. Most Leading Edge systems come with two disk drives (either two floppies or a floppy and a hard disk), a monitor, and a good word-processing package, so you don't have to do any extra legwork before you start pecking away. The Infinite Memory System (\$1,995) comes with 20MB removable disk cartridges, so that you have virtually unlimited storage space. Leading Edge's 15-month warranty is the longest in the industry.

### PC'S LIMITED TURBO PC

PC's Limited is a direct-sales manufacturer that sells its computers by mail and phone. The customer saves the retailer's markup and can also custom order virtually any kind of model. The PC's Limited Turbo PC is a reliable machine with eight slots and a speed of 8MHz. Monochrome graphics are built in, as is a hard-disk drive, making the Turbo PC a good machine for small-business applications. The Turbo PC and the range of PC's Limited products are gaining high marks for value.

### TANDY 1000 EX/1000 SX

Tandy now offers four models in its popular 1000 line. The EX, with a built-in drive on the side (much like the Apple IIc), is a one-piece unit that's neat and compact. It has a headphone jack and a volume control knob, making it good for gaming and educational uses. It's best used for such applications, since adding a second disk drive (external only) to increase productivity power makes it a sprawling system. You can add specially designed expansion boards much like the ones made by Tandy. Like the other 1000s, the EX has good three-voice sound.

The SX is designed more for productivity, with room for two built-in disk drives and a detached keyboard that you can move around to fit your needs. The keyboard layout is slightly nonstandard, which can cause minor difficulties in running some application software. Third-party expansion boards can be used, as well as those from Tandy. The SX comes with *DeskMate II*, a useful multipurpose program.

### VENDEX TURBO 888-XT

The Vendex PC is made by Korea's Samsung Electronics Corp. and marketed by The Netherlands' Vendex Pacific Inc., which has been selling VCRs, TVs, and radios

in the United States since 1985. The Vendex PC is a solid computer that comes with a good keyboard and a readable screen display. It also comes with start-up software—including a word processor, a spreadsheet, and a database—designed to get the novice up-and-going without too much trouble. If you do have trouble, you can dial a toll-free number for technical assistance. And, for a \$50 fee, Vendex will send a technician to your house to help you set up the system. This hand-holding can be helpful.

#### THE 3.5-INCH-DRIVE MODELS

#### IBM PERSONAL SYSTEM/2 MODEL 25/30

The original IBM PC, XT, and AT are no longer manufactured, all replaced by the Personal System/2 line. The differences, as far as the Models 25 and 30 go, are 3.5-inch disk drives, increased speed over the PC and XT, and enhanced graphics capability. Already, a host of big-name software developers have upgraded existing applications to take advantage of those models' smaller disk drives and more colorful graphics. And, though the Models 25 and 30 aren't sold with mice, the computers have built-in mice ports, recognition that many users prefer mice with their keyboards. In another departure from its bare-bones method of selling, IBM has included serial and parallel ports on the Models 25 and 30.

A few notches below the Model 30, as indicated by its number, the Model 25 comes with less equipment and less expandability. It's designed for a classroom setting for networking to a larger, file-serving computer. Thus, it has only one disk drive (a second can be added) and two expansion ports. But, if you have one particular task to accomplish, such as letter writing or filing, this computer might be useful in the home as a second computer.

#### TANDY 1000 HX

The 1000 HX is the first computer with MS-DOS built into the system. Instead of loading DOS from disk, you just turn on the computer, and, three seconds later, you are staring at a menu of choices. This start-up speed is a

boon; however, if you require a higher version of DOS than 2.11, you'll have to load that from disk. The HX comes with a 3.5-inch disk drive, and you can get two. If you want a 5.25-inch drive to convert older files and programs or to run software in that format, you can add an external drive. The keyboard isn't detached from the computer, which makes for a neater but less flexible system. A volume control knob and a headphone jack for outputting three-voice sound make the HX a better computer for game playing than most MS-DOS machines. Even though the initial price is attractive, don't forget you'll need to add more memory (it comes with only 256K), a second disk drive, and a monitor—all of which push your cost near the \$1,000 mark—still a good price for a complete color system.

#### TANDY 1000 TX

The 1000 TX is fast and expandable, well suited for home-business applications. It comes with one 3.5-inch disk drive, and you can add another—a 5.25-inch drive or a hard-disk drive. Though it employs the Intel 80826 microprocessor—the one used in AT-type computers—the TX is not properly an AT. It accepts only PC/XT-type expansion cards. Nonetheless, the processing speed of the 80286 is readily apparent in applications such as spreadsheet calculation, searching and sorting a database, or spell-checking a word-processing document.

#### ZENITH EAZY PC

Zenith has long made MS-DOS computers and, in fact, is one of the largest suppliers to governments and institutions. However, the EaZy PC marks a new direction, since it's aimed at first-time buyers. *MS-DOS Manager*, a graphics-oriented interface that uses windows and drop-down menus, comes with the computer. On the back, there's a mouse port and a parallel port (for a printer). Like many such computers, the EaZy PC is a truncated version of other models and can't be easily expanded. It comes with a 14-inch monochrome monitor, but color isn't an option and can't be attached. It comes standard with 512K; to add more memory you have to attach a "box" to the back of the system. It comes with a parallel port, but no serial port. That, too, comes with the "box."

# COMPUTER TYPES AT A GLANCE

## Classics

Business	Apple IIe/IIc are the best all-around business machines in this group, especially the very expandable IIc, with widest range of software. C 128 is also good, but has limited software.
Personal Productivity	Well-equipped for filing, letter and report-writing, tracking spending and saving, and other personal/household tasks. You often need just one good program, such as <i>AppleWorks</i> for the Apple, to accomplish many jobs. Unless you use the computer frequently, you can get by with one disk drive; a printer is necessary.
Creativity	Better than MS-DOS computers, but not as suitable as the mouse-based machines. You'll probably need to buy add-on hardware, such as a graphics tablet or a card for high-quality music synthesis. Good for creative exploration.
Education	Apple IIe/IIc and C 64/128 duos are especially good for education. The Apple has a wide base of school and home-education software; the Commodore has sound and color that delight children. CoCo has good color for young children and a price that makes it right for use with them. Color monitor (or TV), disk drive generally required.
Games	Excellent "game machines," particularly the Atari XE and C 64/128 for their fine graphics and sound. Apple IIe/IIc not as exciting, but has a vast library of games. CoCo is the weak sister in this group. Disk drive, color monitor (or TV), joystick required for all.

## Mouse Machines

Macintosh has emerged as a viable alternative to MS-DOS for business. The software and user base are there, and swapping files with MS-DOS is becoming easier. Mac business system should include 1MB RAM and hard drive. Atari ST, Amiga, and IIcs lag far behind Mac in this category.
All earn high marks in this category—all offer much help for writing, filing, and budgeting; they make these sometimes rote tasks more fun than on stodgy older systems. One disk drive will suffice, though two are better. ST's monochrome monitor sharper for text than color; Amiga color is a little fuzzy for text work.
These graphics-oriented computers are playgrounds for painting, drawing, music making, and CAD (computer-aided design). The Amiga excels at video applications; the ST is the darling of professional studio musicians; and the Mac is a serious tool for architects, engineers, musicians, and artists.
With the exception of the IIcs, education is not yet a strong point of this group (and the GS doesn't do much that the IIe/IIc don't). But it's easy to add speech to all four computers; along with the rich graphics, that gives them much potential for learning. Children really like using the Mac and that can be educational, too.
All rate "good" to "great" for games; just don't assume that a mouse is a good substitute for a joystick. Some of the games available are a real treat, such as <i>Earl Weaver Baseball</i> on the Amiga and <i>Dark Castle</i> on the Mac. Also, there seem to be more games that are better for adults than children on the Mac.

## MS-DOS Machines

Virtually every type of business application is available—from industry-specific packages for, say, real estate managers, to classic spreadsheets. Get a hard-disk drive and either a monochrome or an EGA monitor (regular CGA monitors aren't sharp enough for prolonged use).
No problem here. You'll be able to do anything you want, especially with high finance. There are several investing and personal finance packages (such as the popular <i>Managing Your Money</i> ) for people at most income levels. A modem is useful for tracking investments, but otherwise a two-drive system is all you truly need.
You've heard that MS-DOS can be a clunky and confusing operating system? Well, the machines were not creatively engineered and don't inspire creativity. You can (within limits and after buying extra hardware) paint and compose music, but this is the one category where MS-DOS machines rank lowest.
More educational software is being published for MS-DOS machines (see <i>this month's Home-School Connection</i> ). However, except for the Tandy 1000s, which have good sound, this group can't compare with the mellifluous mouse machines or the C 64. This drawback isn't fatal, but worth considering. Requires color monitor, joystick.
Once a drab, gray-suited bunch, MS-DOS computers now have an endless stream of games in the pipeline. What they lack in sound and color pyrotechnics, MS-DOS machines make up for with their large memories, which mean more room for the details that make gaming pleasurable. Joystick, color monitor, two disk drives recommended.

## CLASSICS

Model/Manufacturer	Price	Warranty	Memory	Slots	Ports	Video Interface	Graphics Resolution	Hardware Included	Software Included
Apple IIc Apple Computer, Inc. (408) 973-2222	\$940	90 days	128K/1MB	None	2 S, DD, J, M, A	CP	560 x 192 (16 colors)	DD	BAS, DOS, tutorial
Apple IIe Apple Computer, Inc. (408) 973-2222	\$829	90 days	128K/1MB	8	DD, J, C	CP	560 x 192 (16 colors)	DD, MM, NK	BAS, DOS, tutorial
Atari 130 XE Atari Corp. (408) 745-2000	\$150	90 days	128K	None	S, P, DD, A, 2 J, CR	CP, TV	320 x 192 (2 colors)	None	BAS
Commodore 64c Commodore Business Machines (215) 431-9100	\$230	90 days	64K/320K	None	DD, 2 J/M, CR, user expansion	CP, TV	320 x 200 (16 colors)	None	BAS, DOS (w/disk), GEOS, GEO-Write, GEO-Paint, QuantumLink
Commodore 128 Commodore Business Machines (215) 431-9100	\$349	90 days	128K/640K	None	DD, 2 J/M, CR, user expansion	CP, TV, RGBD	320 x 200 (16 colors)	NK	BAS, CP/M (w/disk), DOS tutorial
Color Computer 3 Tandy Corp. (817) 390-3011	\$220	90 days	128K/512K	None	S, DD, 2J, C, CR	CP, TV, RGBA	640 x 192 (4 colors)	None	BAS
Laser 128E Video Technology Computers, Inc. (312) 272-6760	\$479	90 days	128K/1MB	1	2 S, P, DD, M, J	CP, TV, RGBD	560 x 192 (16 colors)	DD, NK	BAS, DOS

## MOUSE MACHINES

Amiga 500 Commodore Business Machines (215) 431-9100	\$700	90 days	512K/9MB	1	S, P, DD, 2 A, 2 M/J/L	RGBA, CP	320 x 400 (32 colors) 640 x 400 (16 colors)	DD, MS, NK	BAS, DOS, Workbench, utilities

### CHART KEY & NOTES

Memory: Measured in kilobytes and megabytes (each K equals 1,024 characters; each MB equals 1,024 Ks), with both standard and manufacturer's maximum given. Speed is listed only for MS-DOS compatibles, since comparing how fast microprocessors run is most helpful only when computers run the same type of software.

Ports: S = serial; P = parallel; DD = disk drive; HD = hard drive; A = audio; J = joystick; M = mouse; L = light pen; C = cassette drive; CR = cartridge

Video interface: CP = composite; RGBA = RGB color (analog); RGBD = RGB color (digital); MT = monochrome text; MG = monochrome graphics; MGH = monochrome graphics/Hercules; CGA = color graphics adapter; EGA = enhanced graphics adapter; N/A Not applicable

Graphics resolution: Maximum graphics resolution is shown (in pixels, measured horizontally and vertically) with the available colors at that resolution. At lower resolution, more colors may be available.

Hardware included: DD = disk drive; HD = hard drive; MM = monochrome monitor; RGB = RGB color monitor; CC = clock/calendar; MS = mouse; NK = numeric keypad

Software included: DOS = appropriate disk operating system (MS-DOS, ProDOS, AmigaDOS, etc.); BAS = BASIC

(The terms are not listed alphabetically, because a better understanding of one term often results from reading the preceding information.)

## MS-DOS TERMS

**MS-DOS:** The MS-DOS operating system, needed to use an IBM-compatible computer, has been updated many times. Some computers are sold with MS-DOS 2.11, but the latest version is MS-DOS 3.3. In general, the later the version the more flexible (however, MS-DOS 3.0 is considered "buggy" and ill-advised). GW BASIC is usually included on the MS-DOS disk. At purchase, make sure that MS-DOS is included with the computer; some manufacturers, including IBM, make it an aftermarket sale.

**PC:** Stands for Personal Computer, as in IBM PC, the model for many of today's compatibles. The IBM PC, which uses an Intel 8088 microprocessor is no longer manufactured. It came with 256K RAM and ran at 4.77MHz.

**XT:** After the IBM PC was established, IBM introduced the IBM PC XT, which uses the same 8088 microprocessor, but adds two important features: eight expansion slots instead of six and an increased power supply (130 watts), which allows use of a hard-disk drive.

**AT:** The IBM PC AT ("Advanced Technology") was the first computer to use the Intel 80286 microprocessor. The AT is faster than the PC and XT and can address more memory; its disk drives also can store more data.

**Intel 8088:** The microprocessor used in the original IBM PC and many other MS-DOS machines.

**Intel 8088-2:** A dual-speed microprocessor that's used in many MS-DOS machines and runs at 4.77MHz and 8MHz.

**Intel 8086:** From the same family as the 8088, the 8086 can run at three speeds (4.77MHz, 8MHz, and 10MHz) and is used in the IBM PS/2 Model 30.

**Intel 80286:** The microprocessor used in AT-type computers, the Tandy TX, and the new IBM PS/2 Models 50 and 60, the 80286 can address 16MB of RAM and can run at four speeds, the highest being 12.5MHz.

**Intel 80386:** The most powerful Intel microprocessor, the 80386 is at the heart of the IBM Personal System/2 Model 80,

the Compaq DESKPRO 386, and the Tandy 4000. The chip is capable of multitasking (running more than one program at a time) and is lightning fast (up to 16 MHz). But it's also ahead of the software; there's no operating system that takes advantage of all its power.

**Clock/Calendar:** A battery-operated device built into many computers that automatically keeps track of the time and date, even when the computer is turned off. When you save a file, the c/c (as it's often referred to) will "stamp" the time and date in your directory, which is helpful in keeping track of your files.

**Display Adapter:** A special card required by the original IBM PC to send output to a monitor. You can buy a card for monochrome text, monochrome graphics (also known as Hercules Graphics), color graphics (CGA), or enhanced color graphics (EGA); some cards combine two or more display modes. Now, of course, many MS-DOS computers build some or all of these interfaces into the machine. But it's still important to know which ones you're buying, since software has specific display requirements. For instance, many applications require a Hercules graphics interface; many game and educational programs require a CGA.

**CGA:** A color graphics adapter, coupled with a color monitor, will display 16 colors (but only four at a time) at 320 x 200 resolution. The top resolution is 640 x 200 with two colors (although some manufacturers

can get 16 colors at the same higher resolution).

**EGA:** An enhanced color graphics adapter, coupled with a compatible monitor, will display 16 colors simultaneously at 640 x 350 resolution.

**Hercules Graphics:** The Hercules monochrome graphics adapter gives resolution of 720 x 348 and is used by such programs as Lotus 1-2-3 to display pie charts and bar graphs on a monochrome monitor. Without such a card (or a color graphics adapter), you can only display text. The Hercules adapter is a standard, and many MS-DOS vendors incorporate "Hercules emulation" into their machines.

## MOUSE TERMS

*These terms can be meaningful not only for those looking to buy a mouse machine, but also for anyone who wants to run Microsoft's Windows or Digital Research's GEM on their IBM PC or compatible (also for buyers of the Amstrad PC, which comes with GEM).*

**Mouse:** A hardware device used to move the cursor, as well as make on-screen choices. Depending on the computer, a mouse comes with one button (Macintosh and Apple IIGS) or two buttons (Amiga, Atari ST, and IBM PC). These are not the same as on-screen "buttons," which are defined below.

**Icon:** An on-screen symbol that represents a program, a document, the cursor, or a program's functions.

**Graphic Interface:** The general term for any human/software interface or operating system that uses picture symbols such as icons to control the computer. Also called a "graphical" interface.

**Window:** A bordered area of the screen in which a specific task (such as word processing) takes place. Also used for setting aside an area of the screen for controlling a program or making choices (see "dialog box").

**Select:** To choose or highlight text or icons by manipulating the cursor with the mouse.

**Click:** When you point the cursor by moving the mouse and pressing (one of) the mouse's button(s). This technique is often used for making on-screen choices.

**Drag:** To hold the mouse button down as you move the mouse. This technique is often used for selecting text or moving icons.

**Button:** On-screen objects, similar in function to actual push-buttons, used in making choices. A button may be round (like a real button), but it may be an oval, an arrow, or any other shape.

**Dialog Box:** A window specifically used for making choices that always contains text and one or more buttons. Also often contains a space for typing in needed information.

**Menu:** A list of commands, formats, fonts, and more available on-screen information. Software on mouse-based machines invariably has a row of menu labels running across the top of the screen. To choose from any one menu, you move the cursor to the label with the mouse. Then, depending on your computer, either the full menu drops down awaiting your choice, or you must pull it down first and then choose (see "Drop-down" or "Pull-down").

**Drop-down or Pull-down:** Depending on which mouse-based computer you're using, the menus across the top of the screen are either pull-down (the Macintosh, Apple IIGS, and Amiga) or drop-down (Atari ST, GEM, and Windows). The difference? When your cursor reaches the menu's label at the top of the screen with a drop-down menu, the menu appears. With pull-down menus, you must press additionally on the mouse button to make it appear. ■

# How to Start A WORD PROCESSING BUSINESS

FIVE ENTREPRENEURS SHARE  
THE SAME SIX-PART FORMULA  
FOR SUCCESS

BY LIS FLEMING

**H**ome-based word-processing services are springing up all over the country and turning personal computers into money machines for many entrepreneurs. Spare bedrooms, converted walk-in closets, and even entire family rooms are becoming home offices for people who've mastered their word-processing software and turned their computer skills into profitable businesses.

What are the secrets to starting a successful word-processing business with your computer? Beyond having the necessary skills and background to perform word-processing services, the rules for success are to (1) find a need and fill it; (2) target your market; (3) produce quality work; (4) provide quality service; (5) develop a backup system; and (6) be professional in performance and attitude. Whether your word-processing business will offer a full range of services or specialize in one field, the rules remain the same.

Five entrepreneurs who followed these rules in establishing their businesses have found that these guidelines made the difference between success and failure. They share their hard-won experiences with you.

## ELIZABETH ROSENBERG LEGAL PAPER SERVICES

Elizabeth Rosenberg has operated Professional Word Processing from her Queens, New York, apartment for three years. Using word-processing and typing skills gained from working at several law firms, Rosenberg decided to start a home-based business. Back-to-back walk-in closets were converted into a compact office for a computer and a printer.

**FILL A NEED.** Her business, Professional Word Processing, specializes in preparing papers for law students. When her husband began taking law courses at night, Rosenberg discovered that there was a need for fast and accurate word processing of student papers, especially contest papers on which three to four students collaborated. Her business cards, posted on bulletin boards at local law schools, and word-of-mouth referrals bring in enough material to keep her working full-time.

LIS FLEMING, of Davis, California, is a consultant specializing in telecommuting. She is executive director of the Association of Electronic Cottagers and author of *The Electronic Cottage Handbook*.

**TARGET A MARKET.** When Rosenberg became aware of the law students' needs for professionally produced papers, she zeroed in on that market, and Professional Word Processing was born.

**QUALITY WORK.** Providing quality work brings referrals and the opportunity to set higher prices. Because professors may penalize students for errors—no matter how small—many students insist that their papers be word processed. If errors are found, they can easily be corrected, and the entire paper can be quickly reprinted, error-free.

To produce legal papers, Rosenberg uses a Leading Edge Model D with a 30MB hard disk and an internal modem. Two daisywheel printers are attached to the computer and can print simultaneously. Her most recent acquisition is a brand-new laser printer. Rosenberg uses *WordPerfect* (WordPerfect Corp.) because it offers the features and flexibility important in producing legal papers, which often include complicated tables of authority.

**QUALITY SERVICE.** Professional Word Processing offers an unusual service. Because

## SIX SECRETS OF SUCCESS

1. FIND A NEED AND FILL IT.
2. TARGET YOUR MARKET.
3. PRODUCE QUALITY WORK.
4. PROVIDE QUALITY SERVICE.
5. DEVELOP A BACKUP SYSTEM.
6. BE PROFESSIONAL.

many joint-project papers—called contest papers—are brought in at the last minute, Rosenberg may find three students camped out in her living room while a fourth sits beside her as she assembles the final paper. Clients sometimes baby-sit Rosenberg's 3-year-old son, Jordan, during what can become all-night sessions. Work often takes on a family spirit, and there is a sense of pride for everyone involved when contest papers place as winners.

To ensure that clients have a clear understanding of the product, Rosenberg has developed a number of useful business forms. A work-order form describes the finished product and price, and a client contract covers both company and client responsibilities (both are signed by the client and Rosenberg). There is also a company price list. Copies of all three documents are available on-line in Data Library 7 of the Working From Home Forum on CompuServe (GO WORK).

**BACKUP SYSTEM.** Rosenberg finds backup help through the local temporary service where she was formerly employed. For professional networking support, she strongly recommends the Working From Home Forum (she is section leader of the word-processing area) and the WordPerfectionists support group, also on CompuServe. On-line support is especially important in areas such as New York, where competition is fierce and competitors may not be

willing to provide pricing information, referrals, or backup service.

**PROFESSIONALISM.** To Rosenberg, professionalism means providing quality products and services, pricing her services at the middle and upper ranges, and conducting transactions with customers in a clear-cut fashion. During the full-time season, her business can bring in \$800 a week. Her method of setting prices can be found in the article "Setting Prices for Word-Processing Services" in Data Library 7 of the Working From Home Forum.

## ADVICE FROM THE ENTREPRENEURS

**Vicki Fite:** "Consider your business a 'real' business. Be professional. A poor product can cause you to lose business referrals."

**Elizabeth Rosenberg:** "Don't set your prices too low. Start in the middle and raise your prices as you become more proficient."

**Melissa Craig:** "There is no substitute for personal service."

**Nancy Eifert:** "Begin by taking a word-processing course at a local community college or high school. Buy the best system with the largest amount of memory that you can afford."

**Katie Allegato:** "Working at home takes a lot of self-discipline."

### VICKI FITE

#### MEDICAL TRANSCRIPTION SERVICES

Vicki Fite has owned and operated a medical transcription service, Southwest Transcription Center, in San Diego, California, for almost 10 years. To establish her business, Fite drew from her experience in the medical field, in which she's worked since high school.

In the beginning, Fite moonlighted as a transcriber at home, while she continued to work at the hospital. After the first year, she took the plunge and turned her part-time business into a full-time home-based enterprise. Now Fite is running her business from an office in town so that she can be closer to her company's employees.

**FILL A NEED.** Now that she has established her own transcription service, she collects the tapes on which the doctors have recorded patient information and transcribes that information into typewritten form. This is a task that requires a strong background in medical terminology and hospital practices.

**TARGET A MARKET.** Southwest Transcription began by targeting its market to hospital transcription in the San Diego area. (One of its clients is the San Diego Navy Hospital, the nation's largest military hospital.) As a result, her company has little need to advertise its services. Word-of-mouth referrals provide as much work as her staff can handle.

**QUALITY WORK.** Fite works hard to find employees who have the necessary background to produce quality work. On the average, Fite employs 10 people full-time, including three people who work in the office and additional tran-

scribers who work from their homes. She could provide work for five more people if she knew where to find qualified medical transcribers. Fite does all the printing of the transcripts herself, partly as a quality-control measure, since accuracy is such an important factor in medical transcription.

**QUALITY SERVICE.** Meeting deadlines is an absolute necessity in hospital transcribing. One example of the urgency revolves around hospital reports that must be finished the same day. Fite has the transcribers pick up tapes from her office every morning. Each afternoon, an employee collects tapes and disks from the transcribers' homes and takes them to Fite for printing and delivery to the hospital. For other kinds of jobs, the transcribers themselves deliver their work to Fite for printing.

Meeting deadlines is where computer equipment makes Fite's service competitive. Many medical transcription services still use typewriters. The computer's speed is a big plus, allowing transcribers to complete 1,800 lines a day. The company now has one IBM PC and four compatibles. The transcribers use *WordPerfect* and IBM's *Writing Assistant*. One home transcriber transmits work via modem to Fite's computer, allowing for even faster turnaround. Fite also has established modem transmission directly to Community Hospital of Chula Vista, further speeding delivery and increasing productivity.

Closely connected to quality service is competitive pricing. The company charges 12 cents per line for medical transcription. (Her

employees earn about half this rate.) Rates are reported to be 15–16 cents per line in the Los Angeles area. Fite attributes the lower San Diego rates to a generally lower wage scale in the area. Fite estimates that it's possible for a top-notch medical transcriber-entrepreneur to earn \$45,000 per year running an independent business. A self-employed transcriber working alone could earn \$25,000–\$30,000.

**BACKUP SYSTEM.** Fite has an office manager who can take over when she's not available.

## KATIE ALLEGATO

### WORD PROCESSING PLUS

Katie Allegato has operated Allegato & Associates in Kissimmee, Florida, for the past two and a half years. She began her venture in an office in a spare bedroom but moved to town when the company expanded to provide mailing-list maintenance, word processing, and computer and software training for small businesses. Allegato's experience in accounting and a growing love for experimenting with computers and software enabled her to start the business.

**FILL A NEED.** Allegato first became aware of the need for computer services when asked to do a company's accounting as an outside service provider. During her many visits to the local computer store, she became acquainted with the dealer who now provides her with many referrals. Allegato, in turn, reviews software for the store. As the computer dealer discovered local needs through conversations with customers, Allegato & Associates began adding to its list of services.

**TARGET A MARKET.** The company's market is targeted to the local geographic area. Only limited advertising is necessary since referrals come from the computer store and satisfied clients. Most services are geared for small businesses on limited budgets, such as restaurants, gift shops, building contractors, and land surveyors.

**QUALITY WORK.** Allegato attributes the quality of her product to a love of what she's doing.

## NANCY EIFERT

### FULL-SERVICE WORD PROCESSING

For the past two years Nancy Eifert has operated Eifert's Word Processing Service from converted kitchen space in her Baltimore, Maryland, home. Capitalizing on her 12 years of experience with Kelly Services and her English and accounting education, she began a full range of secretarial services with her Tandy 1000.

**FILL A NEED.** Eifert realized that some of the smaller, local businesses could benefit from secretarial-type work—either because of their shortage of manpower or because of the expenses.

**TARGET A MARKET.** The company's customer base consists of small, local businesses. With business cards in hand, Eifert began by running ads and making personal calls to those businesses, explaining her services. She has now established a base of steady clients and plans her scheduling and marketing around

Since employees take turns working in the main office, all are familiar with routine business procedures and can work together in any combination.

**PROFESSIONALISM.** Considering your home-based business a "real" business is an absolute must, according to Fite. She is a firm believer in producing professional work and charging competitive prices for her services. Client referrals testify to the quality of Southwest Transcription Center's services.

Her fascination with computers leads her to find the best software for the job. The company has three Leading Edge Model D computers and four dot-matrix printers (three Panasonic and one Epson) with near-letter-quality capabilities. Her next major purchase will be a laser printer. She uses the word-processing software that came with the Leading Edge because of its ease of use, even though it doesn't have all the bells and whistles. She also uses Software Publishing's *First Publisher* and Lotus 1-2-3.

**QUALITY SERVICE.** Her company offers various services and will come to the client's place of business to provide computer training. Pickup and delivery services are also available. Although she often works overtime, her normal business hours are 9:00 a.m. to 6:00 p.m.

**BACKUP SYSTEM.** Because Allegato & Associates has two full-time employees and one part-time home-based independent contractor who has her own equipment, there is always someone available to meet client needs. Allegato's 17-year-old son, Michael, also will pitch in at times to do some data-entry work.

**PROFESSIONALISM.** Running a business requires discipline. Allegato knows that when she's working at home, she can't take time out to do housework. Although her company is presently headquartered in town, she's going to move it home again to larger quarters—the garage, which evolved first into a family room, now will become an office.

their needs. For example, during the times when her steady clients have heavy seasonal demands, Eifert doesn't advertise. At slower times, she places ads in local papers to attract additional work, such as resume formatting.

**QUALITY WORK.** Eifert offers quality in a whole range of products including form letters, resumes, proposals, reports, fliers, announcements, bulletins, banners, newsletters, and databases. She also does mailings and stuffs envelopes. Now she uses a Panasonic Business Partner with a 20MB internal hard disk and two floppy drives, an IBM compatible, and two printers—a Canon PW 1156A dot-matrix printer (for database, graphics, and mailing-list work) and a Tandy daisywheel printer (for letters and resumes). Eifert highly recommends her software, *Professional Write* and *Professional File* (both by Software Publishing Corporation). She has recently purchased a desktop-publishing package, *First Publisher*, from

the same company, and *Newsmaker* (Unison World) to produce newsletters.

**QUALITY SERVICE.** Eifert's Word Processing Service schedules time for its steady clients, ensuring them service when they need it. The company also offers a holiday-banner service. On these special occasions, banners with holiday messages printed on colored paper are sent to veterinarians' clinics, doctors' offices, and classrooms. She also provides editing if a

client's material needs special attention.

**BACKUP SYSTEM.** In this case, backup help is a family affair: Eifert's husband and mother often help when things become hectic.

**PROFESSIONALISM.** To Eifert, being professional means providing yourself with the right tools to do a professional job. Computer equipment and programs that deliver speed, expandability, and ease of use are important to the business.

## MELISSA CRAIG

### RESUME SERVICES

Melissa Craig operated A. Craig Jordan Co., a career-resume and public-relations business from her Davis, California, apartment for a year before dividing her business and moving part of it into downtown space. Now she runs the public-relations and advertising services out of the downtown office and the resume service from her home. Craig used her years of experience in public relations with various firms to help establish her own business.

**FILL A NEED.** Craig saw a need for good, productive resumes that reflected careful and professional career counseling.

**TARGET A MARKET.** Craig began offering resume services to local university students by advertising and running coupons in the student newspaper. Soon word-of-mouth referrals began to take over, and requests for resume services came from university management and, later, from the management of local private enterprises.

**QUALITY WORK.** Quality resumes are a must because they present the client to prospective employers. Skills, experience, and education must be professionally conveyed in print.

To provide high-quality resumes, Craig uses a Macintosh 512K computer. *MacWrite* word-processing software is used in combination with *MacDraw* graphics software (both from Apple Computer) to produce excellent results. Resumes are laid out in an attractive format, often with a border and typeset lettering. A laser printer produces camera-ready copy on glossy paper. The client then takes the glossy to a local copy shop and has resumes and cover letters copied on textured stationery with matching envelopes.

Craig uses *RESUME* (North American

Infonet), a program that offers a range of options; she believes that it saves time and provides helpful guidance in creating resumes. But she cautions that the software must be used *along with* (not in place of) consultation.

**QUALITY SERVICE.** There is no substitute for the time needed to focus on the client's skills and experience. Craig allots at least two hours for each resume. Two 30-minute sessions are spent consulting with the client. One session takes place during the first meeting with the client. The second session is held to review the final draft of the resume before the camera-ready copy is produced.

Her competitive price for resume services in the local area is \$80 (including a \$25 nonreturnable deposit). For an additional fee, cover letters addressed to each prospective employer are prepared with the resumes.

**BACKUP SYSTEM.** A. Craig Jordan Co. uses an independent sales representative who can double as a backup when the need arises.

**PROFESSIONALISM.** To Craig, professionalism means presenting a professional image both in attitude and dress. It means providing quality service at all times and striving to expand and improve her services.

## A FINAL WORD

Does all this sound like a lot of work? It is! Entrepreneurs report that starting and running a business turns out to be more work than they ever anticipated. Those who succeed also report that they would do it all over again. All of the word-processing entrepreneurs sharing their experiences here became enthusiastic and energetic when talking about their businesses. That brings us to the final rule for success—you must enjoy what you do! ■

# A GUIDE TO DESKTOP PUBLISHING

ANSWERS TO MOST COMMONLY ASKED QUESTIONS,  
A GLOSSARY, TIPS ON CREATING A ONE-PAGE  
NEWSLETTER, AND MAC  
AND MS-DOS  
SOFTWARE REVIEWS

**BY STEVE MORGENSTERN  
AND NICK SULLIVAN**

**D**esktop publishing—using a computer as the primary workstation for publishing—is a beguiling term that can make a complex and labor-intensive process sound simple. As with any serious computer application, desktop publishing requires a smooth blending of software and hardware, under the orchestration of a seasoned user. When all systems are in place and working, desktop publishing can be a marvel. One person, bypassing the many assistants required in the publishing process, can churn out professional-quality documents that are fit to be printed and distributed to the world. In a nutshell, here's how it works:

The process of publishing involves three major steps: (1) assembling text, pictures, and charts; (2) arranging them in a visually pleasing, camera-ready mechanical; and (3) printing for mass distribution.

STEVE MORGENSTERN is a contributing editor and NICK SULLIVAN is a senior editor of FAMILY & HOME-OFFICE COMPUTING.

The computer is a perfect tool for the first two steps. You can take text and graphics files from different sources and arrange them in columns on the screen. You can use a scanner to "read" a photograph or illustration into the computer and add that image to your layout. You can change the typesizes and type sizes; you can edit text, size the art, and otherwise manipulate objects on-screen until you like what you see. Then you can laser-print the results and use that printout as a mechanical for further mass printing.

The computer, however, is not so good for the third step. You could use your computer to print 1,000 or 10,000 copies of a book or newsletter, but it's not an efficient method. More likely, you'd take your laser-printed mechanical to be photocopied or professionally printed.

Nonetheless, the ability to perform the tasks of a typesetter and a graphic artist with the aid of a computer makes desktop publishing an alluring enterprise. Since *PageMaker*, the popular desktop-publishing package,

was brought out for the Macintosh in 1985, thousands of desktop-publishing programs and laser printers have been sold.

Corporations use computers to assist in designing promotional materials; newspapers and magazines for layouts; computer users' groups and churches for newsletters; restaurants for menus; theaters for programs; and so on. And for many individuals, desktop publishing provides a business opportunity. These entrepreneurs can produce newsletters, brochures, and even books for companies and institutions that are trying to save on traditional publishing costs.

Before you rush out to buy desktop-publishing software and a laser printer—in addition to a computer, the two key components of a desktop-publishing system—browse through this four-part guide (Questions Commonly Asked, Glossary, How To Create a One-Page Newsletter, and Software Reviews). To start, we answer some of the most commonly asked questions.

## QUESTIONS COMMONLY ASKED

**Q: What can I do with desktop-publishing software that I'm unable to do with my word processor?**

**A:** Desktop-publishing software allows you to freely mix text and graphics in a multiple-page document and gives you a large degree of control over the design of these elements. While some of the more advanced word-processing programs, such as Microsoft Word on the Macintosh, allow you to mix text and graphics, they don't allow the fine design control that most professional desktop-publishing packages do.

Second, this kind of software accepts files from more outside sources than the average word processor. Finally, all desktop-publishing programs take more advantage of the graphics and textual abilities of the laser printer.

If you have one specific task to accomplish—such as a standard newsletter, restaurant menu, or business form—you can certainly use a powerful word-processor with good print-formatting functions. But if you want to publish a variety of documents—business reports and forms, advertisements and promotional material, restaurant menus, theater programs, invitations, resumes, fliers, tickets, posters, charts, and package designs—in various forms, desktop-publishing software is your best bet.

**Q: What's a laser printer, and do I need to buy one?**

**A:** Mechanically, a laser printer works very much like a photocopier, except that the placement of black toner is controlled by a laser beam, which in turn is controlled by your computer. Most popular laser printers offer a resolution of 300 dots per inch (dpi). This compares favorably, say, with a resolution of 70 dpi for an Epson FX-80 dot-matrix printer in draft mode, but does not match the output of professional typesetting equipment, which can range from 635 dpi to 2,540 dpi.

A laser printer is the printer of choice in a classic desktop-publishing system because its output can be used directly as a master for quantity printing. Some laser printers include PostScript (see next question), which translates the computer's codes into printed matter.

While the new 24-pin dot-matrix printers (and the 27-pin Apple ImageWriter LQ) produce superb output,

Here's a typical hardware setup for desktop publishing. From left to right: an Apple LaserWriter printer, a digital scanner (on top of printer), a large-screen monitor (useful for viewing a whole page or a spread at one time), a Macintosh SE, and a hard-disk drive (beneath the SE). On the screen is a page from *Whale Song*, a book produced with this equipment.

they don't support PostScript. However, for many projects, a 24-pin printer fits the bill, and it's also a cost-effective proofing system. If you use desktop-publishing software only occasionally, you may find that using 24-pin printers is a good solution.

Basic list prices for laser printers range from \$2,500 to \$5,000, with discounted prices as low as \$1,700. However, you don't necessarily have to buy a laser printer to use one. Many copy shops and service centers will print your desktop-publishing files for as little as \$1 a page (as compared to approximately \$15 for typesetting). And many typesetters will accept disks or files sent by modem, and print them on laser printers or typesetting machines.

**Q: What is PostScript?**

**A:** PostScript, a language used to control some printers, makes it easy to change the size and style of type. PostScript is built into the Apple LaserWriter printers, and IBM has also announced its support of PostScript, so the language now appears to be an established standard.

PostScript offers several advantages to a desktop publisher. Most important are its abilities to enlarge or reduce type and graphics smoothly and to create special typographic effects. With a PostScript printer, you can quickly change typesets. With non-PostScript printers, you may have to add new font cartridges or load new fonts from disk. The latter method takes time and may require additional memory in your printer.

PostScript can also be used to drive professional Linotronic typesetting

equipment (the models 100 and 300). For those occasions when a laser printer's 300 dots per inch is not fine enough, you can take your disk to a professional typesetter and have the page printed out with up to 2,540 dots per inch resolution.

Unfortunately, PostScript has its price—about \$2,000. That's the difference between a PostScript-equipped laser printer such as Apple's LaserWriter Plus and a non-PostScript printer such as the Hewlett-Packard LaserJet Series II; each of these printers produces printouts at the same 300 dpi resolution. And PostScript can slow down the printing process, a small price to pay for the added flexibility.

**Q: What's a scanner, and do I need to buy one?**

**A:** Scanners translate graphics and photographs on paper into files the computer can display and incorporate into your desktop-publishing documents. Scanners are usually stand-alone units that are connected to the computer; documents are placed flat and read into the computer. But a few scanners replace the ribbon on printers and read documents that move through the printer.

These scanners, such as ThunderScan (\$249 for the ImageWriter) and the Epson Image Scanner (\$300 for the Epson LQ 2500, EX 800, and EX 1000) are considerably slower than stand-alone units. But they are much less expensive, and the quality is good. Prices for scanners can climb to more than \$2,000.

If you plan to use your desktop-publishing setup extensively for graphic arts applications, a scanner could be justified. But many desktop-publishing service centers will scan your graphics and put the file on your disk for a modest fee.

In some cases, the old-fashioned method of manually pasting graphics onto your pages may also be preferable to scanning if you feel confident with the procedure. There's no law that says a desktop publisher is limited to computerized graphics.

If you are using photographs, the pasteup method may be preferable. A professional printer can reproduce photographs (with much higher resolution than those generated by desktop scanners) and put them into position on your computer-generated page layout. And if you want to incor-

porate color photos into your document, you'll have to supply your printer with color separations, which can't be done easily with a scanner or a computer.

**Q: Which system—Macintosh or MS-DOS—is better to use for desktop publishing?**

**A.** On the surface, the Macintosh is a stronger system. The Macintosh is a graphics-oriented computer, and desktop publishing is a graphics-oriented application. Because so much software adheres to the same graphics formats, importing files from different software, using clip art, and printing fonts with the Macintosh are easier than with an MS-DOS computer. Finally, desktop publishing has been a reality on the Macintosh for over two years, so there's more good software available for it; and all Mac desktop publishing programs support the LaserWriter printer and PostScript.

Nonetheless, many users can't discern much difference between *PageMaker* running on the Macintosh and *PageMaker* under MS-DOS.

(*PageMaker* is the only desktop-publishing program that's available on both machines.) The real difference between the two systems is that the standard IBM PC needs several upgrades to run smoothly, whereas the Macintosh is ready to go. For instance, some MS-DOS programs run under Microsoft *Windows*, and some run under GEM—neither of which is native to the machine.

To get the best performance in the MS-DOS world, you should add an accelerator board to a standard IBM PC or compatible or use an AT-compatible. In either case, you'll also have to add a mouse and a graphics adapter to the system. If you want to use color, an enhanced graphics adapter (EGA) is far superior to the standard color graphics adapter (CGA), which can be fuzzy for text.

If you choose the MS-DOS route, you have a world of choices. IBM is selling a desktop system based on its Personal System/2 Model 30. Epson, Kaypro, AST, and other computer manufacturers also sell complete "turnkey" systems, with computer, software, and laser printer.

**Q: Can I use my Amiga, Atari ST, or Apple II for desktop publishing?**

**A:** Yes and no—it depends on how you define desktop publishing. You can produce a newsletter with any of these computers. But you may not have the wide range of graphics capabilities, layout flexibility, or laser-printing options than you can get with Macintosh or MS-DOS computers. So far, professional-quality desktop-publishing software has been limited to the Macintosh and MS-DOS worlds.

This may be changing—we have seen two desktop-publishing packages for the Atari ST series (see review of *Publishing Partner* in the October issue) and talked to developers about upcoming Amiga and Apple II products (such as *The Professional Page* for the Amiga or *Springboard Publisher* for the Apple II).

If you're setting up a system specifically or primarily for desktop publishing, look at the Macintosh or an MS-DOS machine. If you have another computer and want to produce a newsletter, flier, or brochure, you can certainly find the software to do this.

## DESKTOP-PUBLISHING GLOSSARY

**Automatic Hyphenation:** This feature automatically inserts hyphens in words at the end of lines to produce text that fits better, therefore avoiding large spaces between words.

**Camera-ready:** A page layout, also called a mechanical, that is fully prepared for the printer.

**Clip Art:** A file of ready-made graphic images that can be used in a desktop-publishing document.

**Crop Marks:** Corner indicators that show the size an illustration, photograph, or page should be printed.

**Downloadable Soft Fonts:** Type fonts on disk that can be added to a laser printer's memory.

**DPI:** Stands for "dots per inch." In general, the more dpi in a printer's output, the finer the resolution of the printout.

**Font:** Each typestyle, in a specific size and weight, is called a font. The style itself is called a typeface. For example, Times Roman is a typeface—12-point Times Roman bold is a font.

**Flowing Text:** Text that is automatically placed in columns and/or pages by desktop-publishing software, as opposed to text you place manually.

**Frames:** Boxes or rectangles of thin lines that provide borders for blocks of text or pictures.

**Greeking:** The process in which the program will use dummy type (called *Greek*) whenever type appears too small on-screen to be legible.

**Guides:** On-screen markers, based on a set of coordinates, indicating where a piece of text or art should go.

**Justify:** To set lines of type against the left margin (left justified), right margin (right justified), or both (flush justified).

**Kerning:** The process of removing the extra space between certain letter combinations, such as To or Ye, to make them look better.

**Leading:** Pronounced "ledging." The amount of space between lines of text. Leading affords a finer degree of control than single-spacing or double-spacing; it's often used as a supplement to it.

**Mechanical:** (See camera-ready above.)

**Pica:** A typographic unit of measurement equal to one-sixth inch. The width of typeset columns is traditionally measured in picas.

**Point:** A typographic unit of measurement equal to 1/72 inch—there are 12 points in a pica. The height of type is measured in points. You are reading eight point type.

**Rules:** Lines of varying thickness used to separate columns of text or any other elements in a layout.

**Spread:** Two facing pages in a publication that are designed as a single entity.

**Style Sheet:** In desktop publishing, a file containing a combination of type specifications, layout rules, and formatting codes necessary to produce a certain document.

**Thumbnail:** A set of small sketches used when designing a publication to show the general arrangement of art and text on each page.

**Tiling:** A feature in desktop-publishing programs that allows you to print publications larger than your printer's maximum page size, by printing and pasting sections together.

**Tracking:** The process of removing space between all letters, in contrast to kerning, which controls the space between selected letter combinations.

**Wrapping Text:** Fitting text around graphic images. Many desktop-publishing programs will automatically wrap text around rectangular picture blocks—only a few (notably, *Quark XPress*) will wrap text around irregularly shaped graphics.

**WYSIWYG:** Pronounced *wizzy-wig*. Stands for What You See Is What You Get, meaning that the on-screen display will be faithfully sent to the printer and reproduced.

# HOW TO CREATE A ONE-PAGE NEWSLETTER

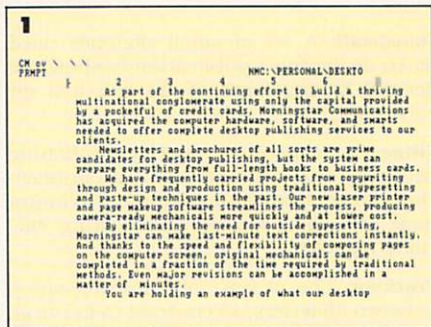

## STEP-BY-STEP

BY STEVE MORGENSTERN

**EDITOR'S NOTE:** When Contributing Editor Steve Morgenstern isn't busy writing for FAMILY & HOME-OFFICE COMPUTING, he runs Morningstar Communications, which provides editorial services for business clients. He recently expanded these services to include desktop publishing. How could he let his clients (and prospective clients) know about his new desktop-publishing setup? The answer was obvious—send out a newsletter! Here's how he did it. These basic steps can be used to create a range of documents.

**1. Use Your Word Processor to Write Text.** Write text with your favorite word-processing program—in this case, *XyWrite III Plus* on an MS-DOS computer. *Ventura Publisher*, the desktop-publishing package I used, accepts *XyWrite* files without problems. With some word processor/desktop-publishing software combinations, you will have to save your files in ASCII format, which means you'll lose any formatting commands.

It's often a good idea to save each headline and each article in a separate file, since they will be printed in different type sizes and styles. Alternatively, you may choose to type the headlines directly onto the page layout using the text-handling capabilities of your desktop-publishing software.

One more word-processing tip: Ordinarily, you insert two spaces after the end of each sentence. This is not good form in typesetting. Either single-space or use your word processor's search-and-replace function to remove the extra spaces before moving on to your desktop-publishing program.

**2. Create and Gather Art.** There are several possibilities for gathering

artwork to include in your publication. You could find a talented artist who works on the computer. You could take art created on paper and transfer it to the computer using a scanner (see "Questions Commonly Asked"). Here I used a piece of clip art—a handsome image of a computer provided with the *GEM Draw Plus* program—in combination with another image.

The second image is a shot of an actual screen from *Ventura Publisher* and was created using a superb piece of software called *Publisher's Paintbrush* (ZSoft, [404] 980-1950). It includes a utility called *FRIEZE* that can capture any graphic image you put up on your screen (from any program), alter it, and print it from *Pub-*

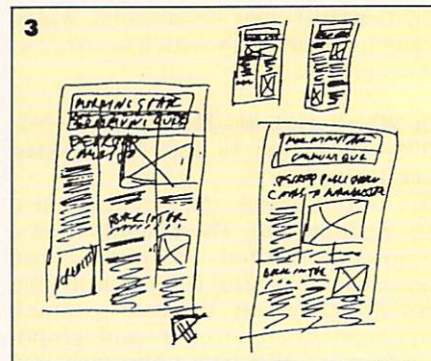

lisher's *Paintbrush*. That's how I got my screen shot. I used the same graphics program to create the newsletter logo.

The third illustration on the page was drawn by a young artist using *PC Paint*. Unfortunately, *Ventura* won't accept *PC Paint* files, so I had to use the *FRIEZE* function again.

Whether you're working with an MS-DOS or a Macintosh system, try to use an object-based drawing program (such as *GEMDraw* or *MacDraw*) rather than a bitmap graphic program (like *PC Paint* or *MacPaint*). Object-oriented programs define images as sets of lines, rather than as sets of dots. This lets you freely change the size of your graphic, and still maintain a smooth image that will print using your printer's full resolution.

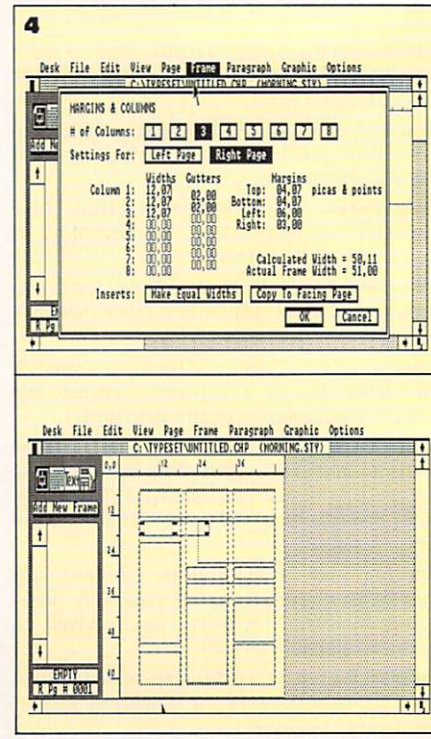

**3. Make Rough Layout Sketches on Paper (Thumbnails).** After text is written and graphics are ready, it's time to design a layout—using pencil and paper. Resist the temptation to move

right to the computer. You'll get better results if you begin with a set of small thumbnail sketches, then go on to draw larger versions of (promising) designs. You can always adjust sizes and add finishing touches on the computer, but a rough sketch is an important first step.

Keep your eyes open for professional examples you can use for inspiration. Many desktop-publishing programs come with sample files you can study and adapt to your needs.

**4. Lay Out a Page on the Computer.** Finally it's time to load your desktop-publishing software and design the page. The first step is to create a set of columns and, within those columns, rectangular boxes to hold your

text and graphics (in *Ventura* these are called frames).

The column guidelines are placed on-screen using a page setup dialog box which asks for page size, margins, and number of columns. Frames are then created with your mouse, by dragging a box from the top left to the lower right corner of the rectangular frame you want. You don't have to build the frames perfectly the first time—you can keep adjusting the size and shape until you get it right, even after you've placed your text or graphics inside.

## 5. Put Text and Graphics on the Page.

Place your prepared text and graphic files in the appropriate frames, then assign type specifications to each text section. Crop and size the graphics until they fit well in the space available. Next, juggle, adjust, edit, and fine-tune until everything reads and looks right.

Some of this work can be done on-screen, but don't hesitate to print out frequent samples as the page develops (as shown here). It's much easier to proofread text on paper and to get an overall view of how the page looks when you have a full-page printout in your hand.

The program breaks the text automatically with hyphens to improve the spacing of justified lines. Sometimes the results are technically correct but don't look right—such as breaking the word *opportunity* between two lines. You can adjust these odd breaks by editing on-screen.

You can correct misspellings and edit the text from within the desktop-publishing program without returning to your word processor. Keep in mind, though, that some programs let you export these corrections back into the original word-processing file (*Ventura* does, for example), and others make the change only in the publishing file and leave the original untouched. If you will need to update your word-processing file manually, keep a copy handy and mark any changes and corrections you make for future reference.

**A.** This is a widow—a single word (or part of a word) that is left on its own at the end of a paragraph. You can either bring down a word from the line above or edit the sentence to eliminate the widow and improve the layout.

**B.** This headline type is too small—it should be bigger. Also, there is too much space between the T and the A in "MORNINGSTAR"—we'll use manual kerning to tighten it up. We'll also add a little space between the K and the T in "DESKTOP"

5

6

**C.** Will this look better if we italicize the quoted section? We'll try changing it—if we don't like the italicization, we can easily change back.

**D.** We don't have enough room for this story now, but there's a big hole next to the computer illustration. Wrapping the text around the picture will eliminate the problem.

**E.** This picture is floating in space—we'll draw a box of rules around it.

**F.** A rule between the columns and another separating the second two columns of the lead story from the second headline will improve the appearance and the readability of the page.

**G.** We could use a subhead for this article. It can be typed directly onto the page layout.

**H.** We can add a tint background to this box, setting it apart from the rest of the page.

Right now our computer illustration has a blank screen—we want to include the captured image of our desktop-publishing program. To do this, we create another small frame and fit it inside the screen of the computer illustration. Then we'll bring in our captured screen image and size and move it until it fits just right.

**6. Laser-Print Your Final Product.** Voilà!—the finished newsletter. If you only need a hundred copies or so, you can print them on your laser printer. If you need more, a local copy shop or quick printer can turn out a crisply printed stack from your sharp laser-printed original.

# DESKTOP-PUBLISHING SOFTWARE

BY STEVE MORGENSTERN

Professional desktop-publishing software, which generally starts at \$300, has several characteristics that set it apart from the wide range of print programs on the market, such as *The Print Shop*; from simple newsletter generators, such as *The Newsroom*; and from word-processing packages with advanced print formatting and graphics features, such as Microsoft Word.

First and foremost, desktop-publishing software is page-layout software that allows you to move text and pictures—imported from a wide range of sources—around the screen as if they were objects. Second, desktop-publishing software includes drivers for laser printers, which are a key part of the classic desktop-publishing system. Finally, desktop-publishing software includes sophisticated typographic control, allowing you to fine-tune the amount of space between lines and characters, as well as the size and style of your text and graphics.

Virtually all of the professional-level desktop-publishing programs run on either the Macintosh or MS-DOS computers. In all cases, two disk drives are necessary, and a hard-disk drive is either required or highly recommended.

The following descriptions of the top programs for both the Macintosh and MS-DOS computers start with a quick overall assessment, then move to a listing of the best (PROS) and worst (CONS) features. These desktop-publishing programs are feature-laden, as they should be for their asking price, and are designed for serious use.

One of the virtues of desktop-publishing software is that it can import files from different sources. Most word processors offer the option of saving ASCII (text) files, and virtually every desktop-publishing program will accept files saved in this format. The downside of ASCII files is that they lack formatting information (such as underlining and boldfacing instructions). You are better off with a desktop-publishing program that will accept files saved in your favorite word processor's and graphics program's usual file formats, if possible.

If you stumble on the terminology when reading the descriptions, refer back to the "Desktop-Publishing Glossary." Unless otherwise noted, all of the programs listed include on-screen measurements, magnifica-

tion, automatic hyphenation, facing-page (a "spread") display, automatic and manual kerning control, a user tutorial, and no copy-protection.

## MACINTOSH

### Quark XPress

PUBLISHER: Quark, Inc.; (303) 934-2211

LIST PRICE: \$695

HARDWARE REQUIREMENTS: Macintosh 512K enhanced, Plus, SE, or II. External or hard disk. 1MB memory recommended.

**Overall:** This program is one of the best around—powerful, yet still easy to use. Several advanced features simplify the design process, and you can save layout templates to reuse later. With its flexible printout capability, *Quark XPress* is a good choice for virtually any publishing project.

**Pros:** Wraps text easily around irregularly shaped graphics. Visible indicator displays text flow from column to column and page to page. Text also flows automatically from column to column or page to page. Good tracking control. Extensive selection of border designs, plus ability to create customized designs. Text search-and-replace function, plus spelling checker. Five levels of on-screen magnification and reduction. Maximum page size 48-by-48 inches using tiled printouts; printout sizing from 25 percent to 400 percent. Prints thumbnails. Limited color printing.

**Cons:** Can't export revisions in text back to original word-processing file. Copy protected (but non-copy protected version available free of charge). Expensive.

### MacPublisher III

PUBLISHER: Boston Publishing Systems; (800) 637-5010; (617) 267-4747

LIST PRICE: \$295

HARDWARE REQUIREMENTS: 512K Macintosh, Plus, SE, II. Two disk drives.

**Overall:** Boasts several features not found in other programs, notably the ability to rotate text or graphics to print at an angle, print text in a "gray screen" tint, and automatically add leading to fill out column depth and vertical justification. A unique simplified "dummy" view of the publication, displaying blocks with article name and size, is also helpful. However, lack of automatic text wrap around graphics and inconvenient

system for continuing text blocks makes this program relatively difficult to use.

**Pros:** Excellent use of "spec sheets" for precise control of text and graphic placement and characteristics. Exceptional selection of graphic tints and patterns. Automatic page and article numbering. Maximum publication size 17-by-28 inches using tiling. Desk accessory for sending pages by modem included. Handy spiral-bound reference guide. Works with 400K disk drives.

**Cons:** Awkward control of text continuations. Complicated procedure for cropping and sizing graphics.

### PageMaker 2.0

PUBLISHER: Aldus Corp.; (206) 622-5500

LIST PRICE: \$495

HARDWARE REQUIREMENTS: Macintosh Plus, SE, or II. 800K external drive (hard disk highly recommended).

**Overall:** The most literal translation of traditional publication pasteup techniques to the computer, *PageMaker* requires placement of individual text blocks and graphic elements "by hand" on screen. This approach is easily understood and allows great freedom in designing individual pages, but the lack of automatic features found in other programs (most notably automatic wrapping of text around graphics and automatic placing of long stories in multiple columns and/or pages) can make the design process more time-consuming than necessary. While many users like *PageMaker's* feel, the program's limitations make it better suited for short publications.

**Pros:** Accepts text and graphic files from a wide range of Macintosh application programs. Useful undo function. Excellent use of nonprinting on-screen guidelines for text and graphic placement. Extensive choice of ruler measurement units. Automatic page numbering. Excellent hyphenation control. Exports text changes back to original file. Five levels of screen magnification and reduction. Maximum publication size 17-by-22 inches with tiling. Prints thumbnails. On-line help. Excellent manuals and tutorial.

**Cons:** Will not automatically wrap text around graphic images—a significant shortcoming. Can't automatically place large documents on multiple pages, making lengthy pasteup jobs tedious. Very limited word-pro-

cessing features, making on-screen editing difficult or impossible.

### **Ready Set Go! 3**

PUBLISHER: Letraset USA; (201) 845-6100

LIST PRICE: \$395

HARDWARE REQUIREMENTS: Macintosh 512K, Plus, SE, II.

**Overall:** *Ready Set Go! 3* boasts an exceptional array of word-processing features and an unusually complete graphics toolbox, but has limited printout capability. The program will run (marginally) with a single 400K drive, though convenience and performance improve drastically with larger drive capacities.

A major revision (Version 4, \$495), to include style sheets, a redesigned user interface, and additional file-format support, was recently announced, but too late for review.

**Pros:** Flexible on-screen grid system for creating layouts. Extensive selection of graphic fill and line patterns. Five levels of on-screen magnification and reduction. Text search-and-replace function, plus spelling checker.

**Cons:** Printouts limited to standard-size pages. No thumbnail printouts. Lacks document-wide automatic kerning. Clumsy picture resizing procedure. Tutorial; no sample documents provided.

## **MS-DOS**

### **PFS: First Publisher**

PUBLISHER: Software Publishing Corp.; (415) 962-8910

LIST PRICE: \$99

HARDWARE REQUIREMENTS: IBM PC or compatible. Two floppy drives or a hard disk.

**Overall:** As the name implies, this is a beginner's program, and it's generally successful at making simple page-makeup tasks easy to accomplish. Text flows automatically around rectangular graphics, fonts are accurately represented on-screen (unusual in an MS-DOS publishing program), and lots of fonts and clip art are included in the package. The major problem is limited laser printer support, especially for the HP LaserJet, which cannot print headline-size type at full resolution with this program. An outstanding program if you're limited to dot-matrix, though.

**Pros:** Easy to learn and to use. Automatic text wrap around rectangular graphics.

**Cons:** Lacks kerning, automatic hyphenation, and facing page display. Limited importation of text and graphics from other programs. Mediocre on-screen rulers.

### **GEM Desktop Publisher**

PUBLISHER: Digital Research, Inc.; (408) 649-3896

LIST PRICE: \$395

HARDWARE REQUIREMENTS: 640K IBM PC or compatible. Two disk drives.

**Overall:** Like *Ventura Publisher*, *GEM Desktop Publisher* uses the comfortable GEM desktop interface and style sheets to format text. There are several problems, though—lack of kerning control or automatic hyphenation, limited font selection, and inability to import graphics from many popular software applications. Still, *GEM Desktop Publisher* does produce handsome printouts at a reasonable price.

**Pros:** Excellent on-screen measurement display for precise positioning of text or graphic elements. Automatic page and footer numbering. Automatic placement of vertical lines between columns. Color printout support.

**Cons:** Supports only GEM fonts (for example, no cartridge or soft fonts for HP LaserJet series, no additional PostScript fonts for Apple LaserWriter). No kerning or tracking control. No superscripts or subscripts. No automatic hyphenation. Can't export text changes back to original file.

### **PageMaker**

(see Macintosh listing above for publisher data)

LIST PRICE: \$695

HARDWARE REQUIREMENTS: 640K IBM PC or compatible, IBM Personal System/2 Model 30. Hard disk; Microsoft Windows.

**Overall:** *PageMaker* for the IBM is identical in page-makeup features and limitations to *PageMaker 2.0* on the Macintosh (see above). Run-time version of Microsoft Windows included. However, the MS-DOS version lacks on-line help and provides fewer printout options.

**Pros and Cons:** (See Macintosh section)

### **Ventura Publisher 1.1**

PUBLISHER: Xerox Corp.; (203) 968-3000

LIST PRICE: \$895

HARDWARE REQUIREMENTS: 512K IBM PC, AT, or compatible. Hard disk.

**Overall:** At the heart of *Ventura Publisher* are style sheets, with each set of typographic and formatting decisions saved under a name (such as "body copy" or "head #1"). The style-sheet system is especially useful for producing documents with a consistent format. In fact, the original release of *Ventura* was considered good only for lengthy reports and manuscripts, and not for publications which change design from page to page. Version 1.1, though, effectively answers these limitations, allowing more interactive page makeup. *Ventura*, which runs under GEM, is a superb tool with both quick design capabilities and fine typographic control. High priced, but worth it.

**Pros:** Accepts text and graphics from a wide range of applications software. Extraordinary degree of typographic control (leading and kerning). Links text blocks and graphics to keep them together as layout changes. Automatically draws rules and boxes in position relative to text, and resizes them when text-block size changes. Exports text changes automatically back to word-processing file. Automatically numbers chapters, sections, headers, footers, footnotes. Automatically highlights loosely spaced lines. Page size up to 11-by-17 inches with tiled printout. Includes 20 sample templates, excellent tutorial and documentation. Runs reasonably well on ordinary PC or compatible.

**Cons:** Does not support LaserJet cartridge fonts (but will use downloadable soft fonts). Expensive. Current version does not import Microsoft Windows format graphics, although the next upgrade should do so; a utility for that purpose is available to registered owners. ■

## **DESKTOP PUBLISHING RESOURCES**

*The Aldus Guide to Basic Design* by Roger C. Parker (Aldus Corp.; \$6.95).

*The Art of Desktop Publishing* by Tony Bove, Cheryl Rhodes, and Wes Thomas (Bantam Books; \$19.95)

*Desktop Publishing on the Mac* by Kevin Rardin (NAL/Plume; \$22.95)

*Desktop Publishing with Your IBM PC and Compatible* by Jerry Willis (HP Books/Knight Ridder Press; \$15.95)

# Home-Office SHOPTALK

AN EXPERT FIELDS  
QUESTIONS  
ABOUT STARTING,  
MAINTAINING,  
AND EXPANDING  
A HOME-BASED  
BUSINESS **BY JOANNE H. PRATT**

**EDITOR'S NOTE:** This installment of *ShopTalk* is the second in a series that began in the October issue.

**Q: Where can I purchase a copy of Patricia McConnell's *The Woman's Work-at-Home Handbook: Income and Independence with a Computer* (Bantam Books, 1986; \$9.95)?**

—C.M. COLLINS, Monroe, North Carolina

**A:** Save your first dime toward independence by telephoning Bantam's toll-free number ([800] 223-6834, ext. 479) to order the handbook.

**Q: I have a Macintosh computer and need some nitty-gritty down-to-earth business information. My neighbor is planning to produce a 35-page tabloid of advertisements and asked me to type approximately 400 ads per page in about one week. I don't think I could type that much if I worked 10 hours a day! He said he would pay me \$35 per tabloid page, the fee printers would charge him. Does that sound competitive?**

**I also have an excellent background in designing newsletter layouts and would enjoy doing them for churches and other groups but don't know how to begin or how much to charge. I've contacted independent CPAs who might be interested in my services, and, again, I'm unsure about my fees. I've typed dissertations for college students, but they often fail to pay, and I don't like doing something for nothing. Can you offer suggestions?**

—C. COLE, Columbia, Missouri

**A:** "I can't do that" is my reaction, also, to jobs that sound overwhelming. But maybe there's a way to turn your neighbor's advertising product into a workable project for yourself. And the same advice applies to other opportunities. (You're fortunate to have found several types of clients who want to use your services.) Your first

JOANNE H. PRATT, president of Joanne H. Pratt Associates, Dallas, Texas, has 28 years of experience operating home-based businesses. Pratt Associates conducts research and consults for private firms and government agencies. Send your questions about working at home to *Home-Office ShopTalk*, FAMILY & HOME-OFFICE COMPUTING, 730 Broadway, New York, NY 10003.

step is to do a little market research.

First check pricing. Call several printers who do typesetting and ask for estimates, so you'll know whether \$35 per tabloid page is really the going rate in Columbia. Does the price include typing from handwritten copy, which is undoubtedly what you'll be doing?

Next, learn a little more about the tabloid. If it's mailed weekly, won't many of the ads be repeated with only minor changes? If you contracted to do the tabloid for "x" number of weeks, you might lose money on the first typing, but make it up on the rest. As for the time spent to type the first copy, you could negotiate to start inputting the ads as the neighbor sells space (rather than trying to type it all in at once). The following editions may require much less time to type. So you need more details about this job—or any job—before you refuse or accept it.

Likewise, building a business of designing newsletters for churches requires a little market research. Telephone several churches and accountants and ask whether they're paying to have newsletters produced. If volunteers prepare the camera-ready copy for printing, there's not much chance to sell your services. But if a church or CPA is contracting to have a newsletter typed and laid out, get copies of it and make some sample mock-ups to show that you can do a better job. Doing a few mock-ups will also give you a better idea of how much time the job will take you and, therefore, how much you should charge.

In any event, a Macintosh gives you a big advantage: you can easily add graphics to your text. Some reproduction businesses now have Macs and Apple LaserWriter laser printers. You could take a disk to one of these shops and get terrific-looking laser printouts that would be inexpensive to reproduce.

Estimate how much time it would take you to lay out each newsletter. Set a minimum acceptable hourly rate for yourself, and don't offer to produce the newsletter at a lower price than your competition unless you're sure you can do so at a profit.

Before you write off the kids who don't pay, try asking for a deposit equivalent to your estimate of half the cost of the job before accepting the work. Then don't relin-

quish the typed product until you're paid the balance. To get more interesting typing jobs, look for faculty who need help preparing their manuscripts for publication.

**Q: A few months ago I read some articles about starting a home-based computer business. As luck would have it, these issues mysteriously disappeared. Could you please send any home-business information to me? I'm using an IBM PC XT with a 30MB hard drive.**

—D. GLEINN, *Miami Lakes, Florida*

**A:** "Starting Your Own Home Business," which appeared in our April issue, is a good starting point. "Top 10 Computer-Based Home Businesses" (June) is a good follow-up. In addition to ordering back issues (FAMILY & HOME-OFFICE COMPUTING, P.O. Box 717, Cooper Station, New York, NY 10276-0717; for one to four issues at \$4.25 each), you might take a look at *The Electronic Cottage Handbook* (\$6, plus \$1 shipping; Lis Fleming, P.O. Box 1738, Davis, CA 95617-1738), which gives an overview of 10 top computer-based home businesses and how to run them.

For even more advice, turn to the excellent Small Business Bibliography Number 2, "Home Businesses," which lists resources for planning, starting, and operating a computer-based home business. You can get a copy by calling the U.S. Small Business Administration Answer Desk ((800) 368-5855) and asking for the telephone number of the SBA office nearest to you.

**Q: Help! I'd like to start a secretarial service that would eventually offer bookkeeping services. I want to start out with the "bare" necessities and expand a piece at a time, while maintaining a high-quality product.**

—S. DENTON, *Alvin, Texas*

**A:** Beat the competition with a laser printer. The laser printer has set a new standard for office documents. To put out a high-quality secretarial product, I recommend building your system around the Hewlett-Packard LaserJet Series II printer. Although this printer lists for \$2,495, it's commonly discounted to about \$1,700. That's still a lot of money, but the LaserJet meets your requirement for expandability very well, especially since you can add a plug-in board. For instance, QMS Inc. ((205) 633-4300) will soon be selling *Jet Script*, which has the Postscript page-description language. Postscript would enable you to print in various fonts, and thus add desktop publishing to your services.

If you think you might turn toward desktop publishing eventually, you should get an IBM PC AT clone (about \$2,000); if not, you can use an IBM PC clone (about \$1,000). Microsoft *Word* is an excellent choice for word-processing software. And there's a host of good bookkeeping software for MS-DOS computers. In general, an MS-DOS system will be less expensive than a Macintosh system.

**Q: I'd like to surprise my work-at-home spouse with something to spruce up his office as a holiday gift. Any suggestions?**

—M. LEATHERS, *Memphis, Tennessee*

**A:** If you want to splurge, a comfortable swivel-tilt desk chair that will roll easily from desk to computer would be fantastic. A version of my Equa chair, manufactured by

Herman Miller Company, is available through furniture dealers. The models range from \$323 to \$1,517, but Equa is worth its weight in gold.

For other ideas, take a look at the office now. If the monitor is propped up on telephone books, buy a swivel-tilt stand. If the computer keyboard is the wrong height for comfortable typing, perhaps a pull-out shelf that attaches under the desk would be welcome. Other ideas are a new telephone that stores 20 or 30 numbers, a facsimile phone that allows you to send images to other facsimile machines, or a personal copier.

Inmac (2465 Augustine Drive, Santa Clara, CA 95054) sells computer furniture and accessories directly to customers through showrooms and catalogs. Pryor Corporation (222 William St., Bensenville, IL 60106) also displays a variety of computer furniture in its catalogs. For more information, look at next month's "Catalog Shopping" article.

**Q: My word-processing business has grown to the point that it overflows the enclosed porch where it is located in my home. I also need to hire someone to help me meet my demands for service. How can I expand my business without leaving my house, so that I can continue to be here when my son arrives home from school?**

—N. LOWELL, *Cincinnati, Ohio*

**A:** Success brings with it a new set of problems! You need to compare your business and personal goals. Since you want to keep your business in your home, you may have to limit the ultimate size of your business. But even so, you can expand beyond your present size.

Cast a critical eye over your office. How much of what you see do you work with every day? If you're typical of most of us, there's a lot of stuff you use infrequently—or never. So move all of your bulky items, such as old files, paper, and other supplies, out of the office and into your garage or a closet. (To make room, be ruthless about discarding objects you've kept for nostalgia.) Buy modular shelving or storage bins to keep your office supplies organized and accessible.

You can add personnel by setting up a second workstation in the space you've just gained, or you can train new workers who'll perform the word processing in their own homes. Judging from the letters we get, there are many people with word-processing and data-entry skills who own computers and would like to work part-time. If you hire people with compatible equipment, they could bring the disks to your office for your approval of their work and final printing. (Most people don't own the letter-quality or laser printers needed to produce high-quality documents.)

One advantage of expanding with part-time labor is that you don't incur the expense of full-time employees until you've built the business to support them. The disadvantage is that you have to keep on top of scheduling the work. I suggest writing a formal agreement so that you can count on help when you need it for rush jobs, but your part-time employees won't have to stay home all day waiting for the phone to ring. For example, you could promise same day delivery of work to customers who come in before 10 a.m. and require your staff to call in for daily assignments at 10:15 a.m. Whatever arrangement you make has to result in quality service for the customers and be beneficial to your helper(s) as well as to you. ■

# Getting More From PC-DOS and MS-DOS

## Part Two

### MINI-BUYER'S GUIDE TO DOS SHELLS—18 REVIEWED

BY HENRY F. BEECHHOLD

EDITOR'S NOTE: In last month's Part One of "Getting More From PC-DOS and MS-DOS," we saw how DOS-shell software can help you gain control of the disk operating system available on the IBM PC and compatibles.

**M**any people find MS-DOS a beast to learn, but with the help of a DOS-shell program, you can begin to tame the beast and get more out of DOS. A DOS shell can also be your gateway to a real mastery of your IBM PC or compatible computer by painlessly teaching you about various DOS commands and functions.

By putting a menu on the screen, a basic DOS shell liberates you from the need to type in the sometimes lengthy and often memory-taxing MS-DOS commands. Then, when you need to perform operating system tasks such as copying files, running a program, or examining a file's contents, you simply make choices from the menu.

#### MAKING MS-DOS WORK FOR YOU

Marilyn Ratcheson is a training manager for a small federal agency headquartered in Chicago called the Railroad Retirement Board. She uses a computer at work to "capture training data for reports, administer course registrations, track budget data, and analyze training-needs survey results." She also has a system at

home. "In addition to bringing office work home, I use it to track my personal investments, keep records for a rental apartment I own, and record information for tax purposes," Ratcheson said.

Early in her computing days, Ratcheson began using a shell program called *Norton Commander*. "When I first started working with a hard disk, I had no idea of what the path command was. [See "Glossary" for definition of "path" and other terms.] So it was great for me to use the *Norton Commander* to locate the executable files, rather than typing in lengthy path names to change directories. Now, however, I have my most common utilities in a RAM disk that is specified in my path, and I have written a bunch of batch files to get me to where I want to go. It's just easier.

"The *Commander* is still one of the utilities on my RAM drive, and I invoke it now and again when I want to copy files or to see what's in files if there's more than one I wish to view. As I get more savvy, I find that I prefer to mix and match utilities. I'm getting close to finding the mix that is just right for the way I work."

Dave Hoagland, of Livermore, California, uses computers extensively both at home and work. He likes *Q-DOS II*. "There are so many ways that *Q-DOS* helps out that it's hard to know where to start. I use *Q-DOS* to quickly find any file anywhere on my hard drive, move me to the appropriate directory, and perform the task at hand—read, edit, erase, run, or whatever. Or *Q-DOS* helps me locate any file with a specific attribute, such

as hidden or read only. Then, if I want, I can change it. Or I can change the name of a directory. The list goes on and on. Frankly, I'd hate to be without *Q-DOS*. I'd recommend it for anyone with a hard disk."

#### SHOPPING FOR A DOS-SHELL PROGRAM

If you've decided that DOS-shell software is what you want, look over the "DOS Shells Comparison Chart" and keep several points in mind.

Let's start by reviewing the basic types of DOS shells outlined last month:

**Type One.** The most elaborate shells, these offer menus within menus for DOS commands and utilities. Their key distinguishing feature is the capability to set up your own customized menus.

**Type Two.** Unlike Type One shells, these don't let you build custom menus. Otherwise, they share many of the same characteristics.

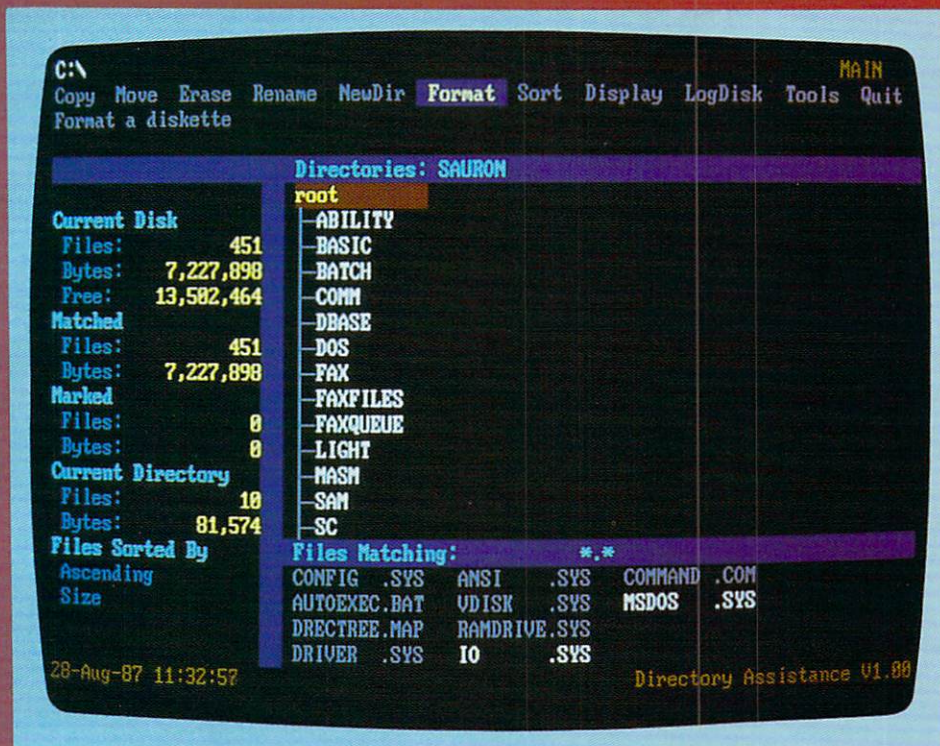

**Type Three.** Both Types One and Two rely on menus of one kind or another to help you control DOS. The rarer Type Three shell (of which *Top-DOS* is the prime example) offers no menus, but enhances DOS with other features that help you manage disks and files.

Two other characteristics of every DOS-shell package are manuals and on-line help.

**Documentation.** In the chart, you'll find references to the quality of documentation supplied with the DOS shells. A few explanations are in order. "Inadequate" means that the explanatory material was perfunctory or poorly written and would probably

HENRY F. BEECHHOLD writes the IBM section in FAMILY & HOME-OFFICE COMPUTING'S Machine Specifics department.

This typical DOS-shell screen comes from *Directory Assistance* (see "Comparison Chart"). Note the names of the various directories—such as **ABILITY**, **DBASE**, and **FAXFILES**—branching off from the root, or main, directory (named **SAURON** in this example). These directory branches make up the "tree" structure of the disk. Also note the MS-DOS commands listed across the top row, such as **COPY**, **ERASE**, and **FORMAT** (that last command is highlighted and explained in the second row.) The left side of the *Directory Assistance* screen offers various bits of information about this hard-disk drive. For instance, there are 451 files in the drive (including programs and documents), but only 10 files in the current, or root, directory.

cause you heartburn. "Adequate" means that you can expect a simple tutorial and some explanation of the various features—enough to help you get the program installed and running. What's missing are the detailed explanations and clear language.

**Help.** All of the shells offer some kind of on-line help, usually called up by pressing a function key. In every case, these help screens give you enough information to solve the immediate problem that prompted your search for help. For example, pressing F1 in *TopDOS* will give you a screen full of *TopDOS* commands. Within a particular shell function (such as the *TopDOS* editor), there are similar screens. These are memory joggers, however, not explanations. You may very well have to resort to either a reference card or the manual itself. In some programs—say *XTREE*—a demand for help results in the appearance of a master help screen and 12 pages of specific explanations. And still other programs display a small inset window through which you can scroll for help that's relevant to a selected function. The Type One programs that allow you to create menus will just as readily allow you to create your own help screens, which can be called up as submenus.

Additional terms found in the "DOS Shells Comparison Chart" and

commonly used in DOS-shell documentation and literature from the publishers of shells are defined in the next section.

## GLOSSARY

**Audit trail.** A security system requiring each user to log onto the system by recording name, date, and time. This information is stored for access by the system manager. Also called a "user log."

**Batch file.** A specialized text file that batches, or groups together, a number of DOS commands. Used to automate various DOS functions.

**Disk scan.** Examination of the disk by the shell to determine what files are present. Often accompanied by sorting capabilities.

**Keyboard macro.** A text string or command string called up by pressing a single key.

**Keystroke operation.** Executing a shell or DOS command by pressing one or two keys, or selecting a menu item by entering its number or letter from the keyboard. Also called "function-key" or "single-key" operation.

**Lotus-like menu.** A horizontally displayed menu from which you pick an entry by moving a selection cursor and pressing a selection key (usually ENTER). Selection at the top level usually results in the display of a second-level menu, and so on. Also allows single-key selection. Similar to

the menu style of Lotus 1-2-3.

**Menu lockout.** A type of security in which certain menus can be blanked, or made inaccessible, to unauthorized users; you can use such menus only through a password. Also called "password security."

**Parameter passing.** A shell's ability to allow the user to enter variables (parameters) after calling a program. For example, you can run a word processor and also load a particular document (the parameter) with the same command. In simple point-and-shoot shells, you can't include parameters when you select a program to run.

**Path.** A DOS command that tells DOS to search directories on specified drives for particular programs or batch files.

**Point-and-shoot.** Move the cursor to a selection and press the "execute key" (usually ENTER). Often combined with Lotus-like menus.

**Screen blanking.** Protecting the video display screen from premature aging (phosphor burn-in) by blanking the display after a user-selected period of computer inactivity.

**Text editor.** Offered by almost every shell for viewing and editing text.

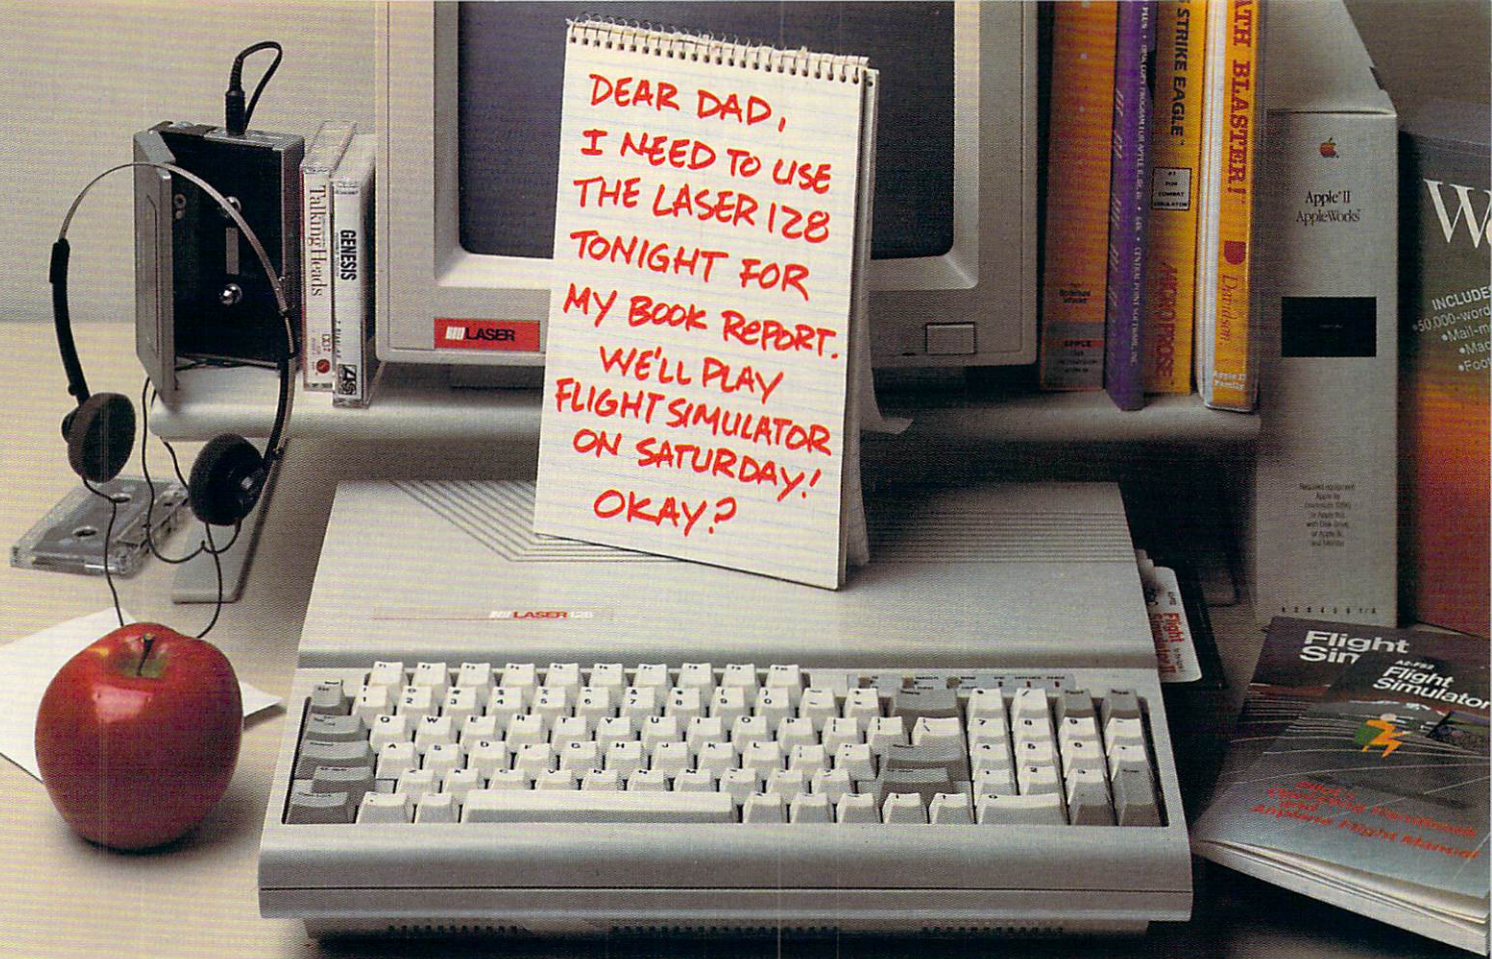

**Tree.** A visual display of a disk's directories, with the various subdirectories branching off like a tree. Helpful for visualizing a hard disk's file structure and for running programs in subdirectories.

# DOS SHELLS COMPARISON CHART

Title/Publisher/Price	System requirements	Type, Notable Features, & Remarks
Idir+ Bourbaki Inc. (208) 342-5849 \$95	256K IBM PC/XT/AT. Hard drive recommended. DOS 2.0 or higher.	Type One. Offers menus within menus within menus. Choose selections by point-and-shoot or function-key method. Includes text editor, on-line help screens, and password protection. Large detailed manual is a big help, especially for intermediate users.
Automenu Magee Enterprises (404) 446-6611 \$50	256K IBM PC/XT/AT. Hard drive recommended. DOS 2.0 or higher.	Type One. The inexperienced can use the provided menus, but the custom menus require some simple DOS programming skills. Includes password security, mouse support, and automatic screen blanking. Small manual is only marginally adequate.
Directory Assistance Individual Software Inc. (415) 341-6116 \$60	256K IBM PC/XT/AT. Hard drive recommended. DOS 2.1 or higher.	Type Two. For DOS functions (such as copying and renaming files or formatting disks), sorting programs and document files, and password protection. Comes with both 5.25-inch and 3.5-inch disks. Very small manual, but an easy-to-use program.
Direc-Tree Plus Micro-Z Company (213) 377-1640 \$55	128K IBM PC/XT/AT. Hard drive recommended. DOS 2.0 or higher.	Type Two. Most menu operations controlled by function keys listed on-screen. Includes two types of security (password and hidden files), a pop-up notepad, mouse support, a text editor, keyboard macros, help windows. Small, yet adequate manual.
The EMCEE Command Software Systems, Inc. (213) 457-1789 \$70	256K IBM PC/XT/AT. Hard drive optional. DOS 2.0 or higher.	Type One. With a menu editor that lets you customize the Main Menu and generate your own submenus. Includes on-line help screens, automatic screen blanking, and password security. Requires some previous DOS knowledge, but the manual is good.
FirstMenu Harvey Software (813) 482-8600 \$50	256K IBM PC/XT/AT. Hard drive recommended. DOS 2.0 or higher.	Type One. Several pop-up menus are provided, and you can customize an unlimited number (although some DOS programming skills are required). Includes a simple text editor and full mouse support. Fast running. Small, only adequate manual.
Hot Executive Systems, Inc. (800) 634-5545 (818) 990-3457 \$75	256K IBM PC/XT/AT. DOS 2.1 or higher. 512K, hard drive. DOS 3.1 or higher recommended.	Type One. Menus (both supplied and individually created) pop up on screen to perform DOS commands (such as FORMAT and DISKCOPY), find files on a hard drive, and give on-line help. Includes a text editor, keyboard macros, and a simple drawing facility for menus. Full customizing. Manual gives good overview.
Le Menu Bartel Software (800) 453-6368 (801) 566-5544 \$80	256K IBM PC/XT/AT. Hard drive required. DOS 2.1 or higher.	Type Two. Point-and-shoot system with five main menus and up to 26 submenus each. Includes pop-up help windows and a separate DOS utility menu (for tasks like disk formatting and backing up a hard disk). Offers password security and a simple file editor. Marginally adequate manual done up as restaurant menu.
Master Control Master Control Systems, Inc. (804) 420-3627 \$60	256K IBM PC/XT/AT. Hard drive required. DOS 2.0 or higher.	Type One. Elaborate system for creating single- or dual-column menus that allow you to start programs with one key. Includes screen blanking, parameter passing to any program selected, and multilevel password security. Manual is only adequate (at best).
MenuManager Southern Computer Systems, Inc. (205) 251-2985 \$50	256K IBM PC/XT/AT. 2nd drive optional. DOS 2.0 or higher.	Type One. Includes a sample menu, but is best for those who need to build their own menus, since the supplied menu editor prompts you step-by-step as you design one. Allows unlimited number of discrete or linked menus. Includes screen blanking, parameter passing, and password security. Adequate manual.
The Norton Commander Peter Norton Computing, Inc. (213) 453-2361 \$75	192K IBM PC/XT/AT. 2nd drive optional. DOS 2.0 or higher.	Type Two. Point-and-shoot menus along with single-key selection for certain DOS tasks (like viewing or copying files and setting up new subdirectories) make it one of the easier shells to learn. Manual contains a good introductory tutorial.
PathMinder Westlake Data Corporation (512) 328-1041 \$65	256K IBM PC/XT/AT. 2nd drive optional. DOS 2.0 or higher.	Type One. File management using Lotus-like menus; also allows custom application menus. Includes a text editor, user log, audit trail, and encryption security. Low memory overhead (uses only 4K) and a very good manual.
Program Manager Lassen Software Inc. (916) 891-6957 \$40	128K IBM PC/XT/AT. Hard drive required. DOS 3.0 or higher.	Type Two. File and menu manager with three different screen formats: one-, two-, and three-column menus. Allows up to 100 programs for each set of menus. Includes text editor and screen blanking. Skimpy, inadequate manual that you print from disk.
Q-DOS II Gazelle Systems (801) 377-1288 \$70	256K IBM PC/XT/AT. Hard drive recommended. DOS 2.0 or higher.	Type Two. Lotus-like menus with full-screen displays of DOS commands, directories, and files. Comes with text editor, and lets you look through all files. Finds files on hard disk, and also copies, moves, deletes, or renames files. Extremely fast.
Smart Directory Extra Dimensions Software (714) 551-2770 \$40	256K IBM PC/XT/AT. Hard drive recommended. DOS 2.0 or higher.	Type Two. Automatically sorts directories either alphabetically, by extension, date, or size. Also displays tree structure of directories and subdirectories. Lets you browse through a file's contents while in the directory. Simple manual for a simple yet useful program.
Snap The Mt. Whitney Group (714) 891-6320 \$100	256K IBM PC/XT/AT. Hard drive required. DOS 2.11 or higher.	Type One. Comes with menus, and lets you custom design your own systems. With point-and-shoot menu selection, a text editor, and file recovery for (accidentally) deleted files. Displays time. Automatically blanks screen when keyboard is inactive. Good, but poorly printed manual.
Top DOS FrontRunner Development Corp. (800) 654-7494 (818) 376-1322 \$70	128K IBM PC/XT/AT. Hard drive optional. DOS 2.0 or higher.	Type Three. Adds new commands to DOS (such as WHEREIS, which searches an entire disk for specific files) and extensions to existing commands (such as DIR/B, which shows all files written BEFORE a specific date). Includes text editor, and works with mouse. Large, first-rate manual explains all.
XTREE Executive Systems, Inc. (800) 634-5545 (818) 990-3457 \$70	192K IBM PC/XT/AT. Hard drive recommended. DOS 2.0 or higher.	Type Two. Shows the entire DOS structure of directories, subdirectories. Can sort files on-screen by name, extension, size, date, or time. Can also copy, move, delete, or rename files. On-line help, but only a small, adequate manual.

Apple IIe/IIc compatible

## Now your kids can afford to do their homework

**More and more students are learning with computers.** However most parents haven't been able to work a computer into their budget. The Laser 128 Apple-compatible computer will let you do all those things that you and your family want to or have to do – homework, write reports, even play games for a fraction of the cost of an Apple. With a Laser you can work out your budget on a computer, instead of breaking it with one. The Laser lets you take advantage of the largest software library available, so your child can learn more at home with the same programs they learn on in school. And, you can do your work at home on the Laser, too.

**The Laser 128 with all its features: built-in disk drive; 128K RAM (expandable to 1 megabyte); serial, parallel, modem and mouse interfaces; 80 column text mode; numeric keypad; and an expansion slot; makes for a pretty educated buy.** When you do your homework on which computer to buy, you'll find the Laser 128 at the head of the class with value. For more information on the Laser 128 and the name of your nearest dealer, contact Video Technology Computers, Inc., 400 Anthony Trail, Northbrook, IL 60062, or call (312) 272-6760.

Apple, Apple IIe and Apple IIc are registered trademarks of Apple Computer, Inc.

#### Amiga 500 Computer

MANUFACTURER: Commodore

ADDRESS: 1200 Wilson Drive, West  
Chester, PA 19380; (215) 431-9100

PRICE: \$700

The 512K Amiga, an audio-visual delight, is best-suited for games and creativity software.

There's a bit of Dr. Jekyll and a bit of Mr. Hyde in the Amiga 500. On occasions, it's a bright, ennobling, challenging machine that responds to your mouse clicks like a sports car responds to a gas pedal pressed to the floor. Other times, it's an infuriating and unreliable machine that delivers cryptic messages such as "Out of heap space." Am I on the right planet?

Commodore, which has seen its highly touted Amiga 1000 flounder in the market for more than two years, recently brought out two new versions of the machine. The 512K Amiga 500 is an "entry-level computer," while the Amiga 2000 is a business machine.

Some Commodore executives like to describe the Amiga 500 as the ultimate computer for the home, which makes a lot of sense. The 500 is an audio-visual machine that will delight and entertain people of all ages. It's a versatile computer capable of virtually any application—be it education, creativity, or personal productivity. For reasons that become clear later, the 500 is not a reliable business machine.

Maybe it's best to envision the 500—with its superior 3.5-inch disk drives and mouse-based operating system—as the logical heir to the

Commodore 64 and 128.

**Setup.** The one-piece unit includes the keyboard, one disk drive, and the CPU. *KickStart*, the main system software, is built-in, so you don't have to load it from disk as you do on the Amiga 1000. Setting up the 500 is a painless operation, but the drawback to the one-piece design quickly becomes evident.

The thick cable that connects a monitor to the CPU is relatively inflexible, making it difficult to move the keyboard about. And when you add the mouse, a second disk drive (\$300), and a printer, you are looking at an ugly tangle of cables.

**Monitor and Keyboard.** The best monitor to use with the 500 is the Amiga 2002-23 (\$400), a sharp RGB analog monitor. The 2002 has excellent sound and color (4,096 colors are available). In addition, through the Preferences function in *Workbench* (software that comes with the machine), you can change the amount of red, green, and blue signals to yield a picture you'll find visually attractive.

Not long after I had hooked up the system, I was listening to the rich sound of Bach's "Jesu Joy of Man's Desiring," which is one of the demos with AmigaBASIC. That was an ethereal moment: my family stared as if it were 1948 and I had turned on a television.

The 500 keyboard is superb. It's compact, yet has a full assortment of keys: a numeric keypad, a separate cursor keypad, special AMIGA and COMMODORE keys, 10 function keys, and large SHIFT and RETURN keys for roughshod typists like me.

**Operation.** When you turn on the Amiga, a picture of the *Workbench* disk appears on-screen, an indication that you should insert it into the drive. (The disk drives make a quiet thumping sound when in use.) Do that, and *Workbench* loads. Alternatively, you can directly load a commercial software package.

You can fool around with *Workbench* for hours to get the feel of the machine. Included are Clock, Notepad, Calculator, and Preferences sections that allow you to customize

various aspects of the computer's performance (color scheme and printer type, for instance).

The Say section, which lets you try out the Amiga's built-in speech function, is a lot of fun. Type in any sentence and the Amiga will say it, with varying degrees of accuracy. I typed *Reagan*, and I heard *Reegun*. I tried *Raygun* and heard our President's name properly pronounced. You can play with the tone, pitch, and rate of the voice, as well as the gender, to get different effects.

The *Extras* disk that comes with the machine also has short speech demos, as well as minitutorials that show you how to change or print graphic images. I'm not a programmer and have never had much interest in BASIC, but I found the Amiga-BASIC's presentation enticing. You can show the program listing on one-half of the screen, run the program on the other half, and then watch the effect of your changes.

To try out the Amiga's multitasking ability, I loaded the Bach *Jesu* BASIC demo and Notepad from *Workbench*. What a way to work! As I typed my notes, I listened to Bach in the background.

In the month or so that I tested the Amiga 500, I experienced many highs and lows. Often, I'd think I was mastering the machine when the screen would "freeze." Once, a spreadsheet program crashed and I got the message: SOFTWARE FAILURE. PRESS LEFT MOUSE BUTTON TO CONTINUE. GURU MEDITATION #00000003-00042050.

I suppose the number is a way to trace the error; I didn't really care because I wasn't planning to use the software seriously. But, having seen that and having heard similar stories from Amiga 1000 users, I wouldn't encourage anyone to depend on the Amiga as a business machine. However, it's hard to tell whether the computer or the software is at fault.

**Software.** Any computer, whatever its native talent, isn't worth a dime unless it has good commercial software that draws on the talent. Fortunately, there is some software that makes the Amiga sing. The majority

## PRODUCT REVIEWS

of the 500 or so packages comprises creativity software and games.

*Deluxe Music Construction Set*, *DeluxePrint*, *DeluxePaint II*, *Instant Music*, *Earl Weaver Baseball*, and *Marble Madness* (all from Electronic Arts) are all excuses to buy an Amiga. *Defender of the Crown*, *King of Chicago*, and *SINBAD and The Throne of The Falcon* are games with spectacular graphics (all from Mindscape) that effectively utilize the Amiga 500's sound capabilities. Communications (*Diga!*) and animation (*Aegis Animator*) software are available from Aegis Development Inc. and word-processing software is available from a number of publishers, including WordPerfect Corp. First Byte (distributed through Electronic Arts) sells a line of educational software that takes advantage of the 500's built-in speech capability.

Given the level and type of software support, the Amiga is best considered a game and creativity machine. It's fun to use and can be a challenge for inquiring people. In addition, anyone with a technical nature would probably love the amount of control you can exert over the machine, the sophisticated BASIC, and the machine's depth.

When will the Amiga 500 be suitable for a broader audience? When more software is developed and distributed. The chicken is here. We're waiting for the eggs. —NICK SULLIVAN

EDITOR'S NOTE: For those who are interested in learning more about the Amiga, your local Amiga dealer may have copies of a video entitled "Video Test Flight."

### SP-180AI Dot-Matrix Printer

MANUFACTURER: Seikosha America Inc.  
ADDRESS: 1111 MacArthur Blvd., Mahwah, NJ 07430; (201) 529-4655, (800) 422-7768

HARDWARE REQUIREMENTS: IBM PC, PS/2, and compatibles; (the SP-180VC for C 64/128)

PRICE: \$249

Seikosha, most often recognized as the Japanese manufacturer of Seiko and Pulsar timepieces, sells 13 dot-matrix printers, ranging in price from \$249 to \$1,949. IBM PC and compatible owners who don't want to spend too much on a printer might want to consider the com-

pany's \$249 SP-180AI nine-pin dot-matrix printer.

The lightweight nine-pound printer measures 16-by-4.6-by-11.8 inches. It produces copy at 100 characters per second (cps) in draft mode and 20 cps in near-letter-quality (NLQ) mode (compared to 120 cps and 16 cps, respectively, on the \$299 Epson LX-86).

Its NLQ type should be acceptable for much of your business and professional correspondence, while the draft type will suffice for school and work reports and personal letters.

The printer's features include character-width selection, superscript and subscript, underlining, boldfacing, page-length setting, horizontal-tab setting, margin setting, and graphic printing. There are also international character sets for seven languages (Danish, English, French, German, Italian, Spanish, and Swedish). The SP-180AI accepts paper up to 10-inches wide, prints in elite and pica modes, and has a 1.5K buffer.

What I was surprised to find missing, however, were form-feed and line-feed buttons. This means that whenever you need to advance the printer paper, you must do it manually by turning the paper-feed knob. Not only is this irritating, but it wears on the printing mechanism.

I also had a problem with the printer's NLQ mode. When I changed to NLQ, the power-light blinked (indicating an error, according to the manual), and I couldn't get the printer working. So I called Seikosha's tech-support hotline and an assistant eagerly helped me rectify the problem. (I had chosen the inappropriate printer driver on my word processor.) Once I loaded the correct printer driver, the NLQ mode worked perfectly—although it crept at 20 cps.

Other than that, setting up the printer and getting it to work with my Zenith computer was a breeze. The manual accurately illustrates and describes the steps to setting up and using the printer.

The SP-180AI is sold through catalogs and stores, such as Target and Toys "R" Us stores and is covered under a two-year limited warranty.

With its \$249 price tag, easy setup, and Epson compatibility, this printer is, indeed, suitable for someone looking for an inexpensive, no-frills printer.

### Thomson EGA Ultra Version

MANUFACTURER: Thomson Consumer Products Corp.

ADDRESS: 5731 West Slauson Ave., Suite 111, Culver City, CA 90230; (213) 568-1002

HARDWARE REQUIREMENTS: IBM PC and compatibles with a 4.25-inch half-slot

PRICE: \$495

You've decided that you want an EGA card so you can get color and graphics on your IBM PC or compatible. Maybe you're interested in buying educational software for your kids, playing a few games, or impressing your business associates with dazzling graphics presentations. Or maybe you already have a CGA card—but want an EGA card to increase your computer's color and resolution.

You can plug a mouse directly into this Thomson EGA Ultra Version card.

When you start shopping around for an EGA card, be sure to look at the Thomson EGA Ultra Version. Like all EGA cards, the Thomson EGA Ultra Version will run virtually every software product that requires a Monochrome Graphics Adapter, Hercules Graphics Adapter, Color Graphics Adapter, or Enhanced Graphics Adapter.

But the adapter stands out from its competition in other ways. First, it includes a Microsoft Mouse Inport, which allows you to plug a mouse directly into the EGA card. If you use a mouse, this feature will save a slot on your computer for something else. And your mouse will work just as well through this card as it does through its own card.

Second, the Thomson EGA Ultra Version comes with special drivers to speed up Microsoft Windows, AutoCAD, Lotus 1-2-3, and Symphony. Also included is TEGA, a program that will blank your screen after a specified period of time without keyboard action. The program also

### TAC3 and TAC5 Joysticks

MANUFACTURER: Suncom

ADDRESS: 260 Holbrook Drive, Wheeling, IL 60090; (312) 459-8000

HARDWARE REQUIREMENTS: Amiga, Atari 800/XL/XE, Atari ST, Commodore 64/128, and TI-99/4A (with an adapter)

PRICE: \$16 (Tac3), \$20 (Tac5)

The TAC5 clicks when you move it.

To an obsessive game player like me, there are few things in life more important than a good joystick. (A great new game is one of them.) Above all, a joystick should be comfortable. If it pinches or is too heavy or too stiff, it tires me long before I'm ready to turn off the computer. Suncom's Tac3 and Tac5 are two joysticks that won't tire me out before the game does.

The lightweight and easy-to-move Tac3 features a wide base with two fire buttons and a tall, molded stick with a third fire button at the tip. The button placement makes the Tac3 accommodating to more people. I prefer to use the fire button on top of the stick, but some of my friends like to use the button on the base. And because there are two buttons on the base, lefties aren't at a disadvantage.

On the outside, the Tac5 joystick is almost identical to the Tac3. The three buttons are present, and the controller is just as light. The difference between the two isn't obvious

until you move the stick. The Tac5 features Suncom's Micro-Switch technology, which basically means that you can feel and hear the stick click into position when you move it.

However, the fact that the Tac3 and Tac5 joysticks are lightweight and loose may be a drawback, primarily when it comes to durability. The joysticks feel somewhat flimsy and the stick does twist noticeably in the base. But this didn't concern me as much when I remembered that the Tac3 carries a two-year warranty, and the Tac5 is guaranteed for a lifetime.

## HOME-OFFICE EQUIPMENT

### Canon Faxphone 10

MANUFACTURER: Canon U.S.A., Inc.

ADDRESS: One Canon Plaza, Lake Success, NY 11042

PRICE: \$1,995

This past summer, *BusinessWeek* ran a story telling its readers about the growing number of inexpensive facsimile machines making their way into homes. The headline asked, "A Fax in Every Foyer?"

While most of us would answer that question with a definite "no," the number of fax units in homes will increase dramatically during the next few years. Indeed, many people who work from their homes are finding that facsimiles are the fastest, least expensive, and *easiest* way to send documents and images to other places of business. (See the article on facsimile phones in this month's *The Office at Home* department.)

The first company to introduce a fax phone specifically for home and small business use was Canon. The Canon Faxphone 10, introduced last year, is a combination G2/G3 facsimile machine, telephone, copier, and clock/calendar. It's so simple to operate that I figured out how to transmit a document in less than 10 minutes with minimal manual reading. (Setting the time and date on the LCD display was the hardest thing I had to do.)

To send something, you simply insert one to five pages of material face down into a tray, dial the number of the receiving unit, listen for a beep, and press start. And presto, in goes the paper into one slot and out it comes from another. That's it. Receiving material is even easier. Just

The Canon Faxphone 10 is equipped with a facsimile machine, a telephone, a copier, and a clock/calendar.

leave the machine on automatic; people can send you documents when you're not even there. Even Federal Express isn't that accommodating.

Federal Express isn't nearly as fast, either. The Faxphone 10 will send a one-page document to another Canon machine in 17 seconds, to another G3 facimile in 20 seconds, and to a G2 unit in three minutes or less.

With the Canon Faxphone 10, documents that are transmitted must be between 5.9 inches and 8.5 inches in width and longer than 3.6 inches. To get around these limitations, you just have to enlarge or reduce your material or place the document or material into a document sleeve (included with the unit). Also, transmission time to any G2/G3 unit can't exceed 16 minutes.

The attractive, gray machine includes a mute button, speed dial and auto-redial capabilities, and a hold button that will play a silly computerized version of "Lullaby" for the other party.

About the only thing that disappointed me was the machine's copying capabilities. Although easy to operate, the copier will make only one copy at a time and only on thermal paper. While this is fine if you want to make a single copy of a document for your own records, you'll need a separate copier for any kind of substantial use.

If you exchange materials with companies that have fax machines, you might want to consider one for yourself. Faxphones are easier to use than modems and can send and receive pictures. And sending materials via fax is faster and less expensive than express mail. While today's prices make faxphones prohibitive for some, their costs are sure to drop over the next year or so.

## PRODUCT REVIEWS

### Signet 100

MANUFACTURER: Royal Consumer Business Products

ADDRESS: 200 Sheffield Street, Mountainside, NJ 07092; (201) 789-2800  
PRICE: \$600

Royal Consumer Business Products recently introduced its Signet series of electronic typewriters, ranging in price from \$300 to \$600 and targeting everyone from students to home-business owners. This summer, I gave Royal's top-of-the-line model, the Signet 100, a run for its money and was quite pleased with the machine's performance. With its impressive word-processing features and spelling checker, it made my own electric typewriter seem as primitive as a chisel and stone.

The Signet 100 has 12K of memory and an 80,000-word dictionary.

Many things about the Signet 100 reminded me of a computer. It comes with 12K of memory and allows you to store files. And the keyboard has a light touch that feels more like my computer than my typewriter. (To limit my typos, I had to readjust my pecks.)

What impressed me most was ProSpell, the typewriter's 80,000-word Merriam Webster-based dictionary. ProSpell checks the spellings of words as you type; a small beep alerts you to words that aren't in its dictionary. (You can adjust the volume of the beep.) ProSpell lets you add frequently used words—that it doesn't recognize—to its dictionary.

The Signet 100 produces text in 10, 12, and 15 characters-per-inch (cpi) modes and can justify margins and print in italics and bold. The typewriter also has a 20-character liquid crystal display (LCD) that allows you to double-check for spelling, punctuation, and spacing mistakes before printing.

The machine's other features include full-line correction memory, full-line or word underlining, automatic centering, automatic carrier return, decimal tabulation, index up and index down, and automatic shut-off whenever the top is opened (COVER OPEN appears on its LCD).

The Signet 100 comes with an instruction manual that includes a diagram of the typewriter and clearly labels the machine parts to facilitate an easy, quick setup. There's also a section that depicts the keyboard layout and describes the keys and their respective functions, such as the DECIMAL TAB KEY, which automatically aligns all numbers by their decimal points.

The Signet 100 has a full 90-day warranty and a limited one-year warranty. There are 302 service centers nationwide.

CIRCLE READER SERVICE 106

### Copy-Jack 96 Handycopy Machine

MANUFACTURER: PLUS USA Corporation

ADDRESS: 3 Reuten Drive, Closter, NJ 07624; (201) 767-6950; 17980 S. Savarona Way, Carson, CA 90746  
(213) 321-9419

PRICE: \$450

It happens to just about all of us now and again: You need to make a copy of something, but you're nowhere near a copy machine.

You might be out relaxing at a poolside, reading *National Geographic*. Or on the commuter railroad reading the end-of-day stock tables. Or even at your parents' house on a mid-April evening, helping them complete their tax return.

What do you do? Tear out pages from *National Geographic*? Jot down all the stock information on the back of envelopes? Send out the tax return without making a copy? Or hop in the car in search of an open library or copy shop?

These are the scenarios I pose to friends who question the usefulness of copiers that fit in briefcases and purses. Portable copiers are a neat concept from Plus Corporation. In April 1986, the company introduced a product called the Copy-Jack 40, and it recently introduced the Copy-Jack 96. A short while ago, I took a look at the 96.

This hand-held copier is battery-powered and can make four-inch wide copies of documents.

The Copy-Jack 96 is a battery-powered copier that weighs less than two pounds and comes with a recharger, a carrying case, and a strap. (You can use the Copy-Jack 96 for just 20 minutes before an eight-hour recharging session is needed.)

To make a copy: (1) place the copier at the beginning of what you want to copy, (2) secure the end of the paper and the original so they don't move, and (3) firmly move the copier over the surface at a rate about three-eighths of an inch per second while holding down the copy switch. Sounds easy, doesn't it? It's not—especially if there isn't a flat surface nearby (for instance, when you're on a train or a bus).

Unfortunately, while the Copy-Jack 96 is a nifty idea, I found it cumbersome, unreliable, and overpriced. The copier, which uses thermal paper, can produce only four-inch-wide copies. And unless you move slowly and steadily, the results are barely legible.

On top of this, the machine that I used repeatedly overheated in the middle of copying documents, and I had to wait for a couple of hours before it would work again. (A built-in battery protection device automatically shuts off the machine when it gets too hot.) There were times when I could have gone to a copy shop, had a long lunch, and returned home again, waiting for the copier to work.

The limitations of this copier make it overpriced and frivolous—especially when you can get a full-fledged personal copier for the same price.

# Organize Your Work! With The Complete Desktop Utility That Gives You Everything You Need.

*BetterWorking Desktop* is the time-saving tool that can help you schedule meetings, remind you of appointments, keep track of names, addresses and telephone numbers, automatically dial phone numbers, organize your "to-do" list, and even tell you the time in 16 major cities around the world!

When you need to dash off a quick memo use *BetterWorking Desktop*'s MEMO PAD. Enter your memo in the preset memo format and print it out.

Keep all of your important names, addresses and telephone numbers in the auto-dial ADDRESS BOOK. You can type in additional information about a person, such as their birthday, hobbies or favorite topics of conversation.

Doing business overseas? The WORLD CLOCK shows you the time in 16 cities around the world, including New York, Los Angeles, London, and Hong Kong.

The CALENDAR keeps track of your schedule months in advance. Reminders of upcoming events keep you prepared for meetings and appointments, both on the day of the event and at a preset period of time before the event.

Jot down due dates, assignments, and personal tasks on the "TO-DO" LIST.

The UTILITIES option gives you an easy-to-use on-screen menu of DOS management commands. It allows you to format and copy disks, erase, rename, and view files without ever leaving *BetterWorking Desktop*.

*BetterWorking Desktop* can be RAM resident if you have at least 512K. So for example, if you are busy preparing a financial report using Lotus 1-2-3 and your boss calls to schedule a meeting, you can simply hit the hot key, schedule the meeting on your Calendar, hit the hot key again and you are back to work.

So remove that clutter from your desk!  
Organize your work with

# SOFTWARE GUIDE

Welcome to FAMILY & HOME-OFFICE COMPUTING's Software Guide, the most comprehensive listing available of two dozen of the newest, most noteworthy, and/or best programs on the market. Our reviewers include families from all over the country who have judged the software according to the following criteria: long-term benefits and applications, adaptability, and advantages of using a computer for a given task. Programs have been evaluated and rated for their performance in each of the categories listed below. More detailed reviews follow the chart. Unless otherwise noted, all programs are in disk format, and minimum memory requirements are 48K for Apple II series, 48K for Atari, 128K for IBM PC/PCjr or compatibles, and 128K for Macintosh. "Atari" alone denotes the 800/XL/XE series. "C 64/128" means the software will run on both a C 64 and a C 128 computer in C-64 mode; "C 128" alone means the software will run only on that machine.

# *"What You See Is What You Get"* *With The* *Better Working Wordprocessor*

Because what you see on your screen is what will print out on your printer. There's no more guesswork to editing and laying out your documents. Drop down menus allow quick and easy access to program options, there's no long list of commands to memorize. And context sensitive on-screen help is always available if you get stuck. The **OUTLINER** provides you with a structure for organizing major and minor points into a coherent writing plan before you actually begin. You can easily transfer the outline to the **WORDPROCESSOR** to finish your report. The wordprocessor comes complete with a full range of text editing, layout, and formatting functions. Check for accuracy with the 100,000 word **SPELLING CORRECTOR**. Not only does it recognize misspelled words but it gives a suggested spelling. You can add your own words to the user dictionary. Over 240 printers are supported. It's easy to setup your printer... simply select your printer from the list of pre-set printer models. *Better Working Wordprocessor* provides complete, state-of-the-art word processing with particular attention to making it easy to learn and effortless to use.

#### Features:

Six special print features to choose from including underlining, **boldface**, *italics*, double-width, enhanced and compressed print.

Page layout capabilities that include headers, footers, centering, automatic table of contents and automatic page numbering. Other layout options include text justification, line spacing, tabs, margins, and upper or lower case option. Mailmerge for personalized mass mailings.

Available at fine software dealers.

Make Any Computer Do Exactly What You Want With McGraw-Hill's

# Contemporary Programming & Software Design Series

## From Writing Your Own Programs to Modifying Existing Software, Here's the New, Easy, and Low Cost Way to Unlock the Secrets of Your Computer

Whether you use computers for business, for personal applications, or for fun, off-the-shelf programs will never do everything you want them to do for you. That's because they were written by programmers to satisfy what they perceived as the needs of the greatest number of potential users—often missing some or many of your specific needs.

That's why McGraw-Hill's new Contemporary Programming and Software Design Series teaches you how to create your own software... either from scratch or by making key modifications to existing programs.

There is nothing magical about it. You learn the process of building a computer program step-by-step with McGraw-Hill *Concept Modules* sent to you one at a time, once a month. Each of the ten modules in the Series takes you through an important step in the development of the structure and detailed logic of a program, including testing, debugging, and documentation.

### Unique Interactive Hands-On Instruction

Each module includes an easy-to-understand guide PLUS a 5¼" floppy disk containing typical programs and interactive instruction that you can run on Commodore 64 and 128 computers, IBM PCs and PC compatibles for hands-on experience.

In the first Module, for example, when your sample program (Declining Interest Loans) appears on your screen, you'll find errors on certain program lines. You'll also see that the program is only three-quarters completed.

Now comes the fun part. You'll discover how this program is built, and in the process you'll learn how to identify and correct errors. And by the end of Module 1, you'll actually have completed this program yourself.

But there's more. Special graphics on your screen work in conjunction with the accompanying guide to amplify, illustrate, and deepen your understanding of software design principles.

Make no mistake. Almost all books and courses on "programming" teach you only the final 5% of the total programming process—namely, how to code in a specific language... information of little value if you don't know how to reach the point in the programming process when you are ready to code.

With the Series, however, you'll learn to create your own programs from scratch, even modify off-the-shelf programs. You'll learn enough BASIC and machine language to get you started on the remaining 5% of the programming process.

### Build Your Own Personal Software Library

The sample programs you work with throughout the Series are excellent learning tools. But they're more than that. By combining the sample programs onto one master disk, you'll have the start of your own personal software library. In addition to the programs you've written and modified throughout the Series, you'll also receive dozens of the most popular public domain and user-supported programs, such as data base manager, word processor, calendar generator, appointments reminder and much, much more.

### 15-Day No-Risk Trial

To order your first module without risk, send the postage-paid card today.

Examine the first module for 15 days and see how the Series will help you make your computer do exactly what you want it to do!

If someone has beaten you to the card, write to us for ordering information about the Contemporary Programming and Software Design Series.

### The Crucial 95%—Learn the Foundation of Computer Programming

While the Series includes interactive disks that run on specific computers, everything you learn you can apply to any language or machine. Why is this possible? Because McGraw-Hill knows programming is far more than coding a program into the computer using a specific language. In the real world of computers, 95% of the programming process is carried out using design techniques that are independent of specific language or machine. It is this crucial 95% that you thoroughly understand and master in the Series.

# A Proven Achievement

## GUNSHIP

### Recognized by Reviewers...

"GUNSHIP may be the best simulation of any type ever created for the C-64... a perfect simulation for novices and aerial combat veterans alike..."

(RUN, August 1987)

"Take all your combat flight simulators and stick them in the bin. GUNSHIP is the ultimate..."

(Computer & Video Games Monthly, U.K., Feb. 1987)

"In terms of action alone, GUNSHIP is the best flying game we've ever played... it could become one of your favorites..."

(Family Computing, June 1987)

"GUNSHIP... is a very well-executed simulation, not just a game... MicroProse has another winner..."

(Compute!'s Gazette, May 1987)

### Acknowledged by our customers...

"... from the eye-catching packaging to the palm-drenching, flak-dodging flight visuals, GUNSHIP is a standard setter for the industry..."

(J.R., Portland, Oregon)

"I think it's the best flight simulator I've seen for [my computer] and I've seen them all..."

(L.C., Crystal Lake, Florida)

"Thank you for releasing the most AWESOME program GUNSHIP... should easily be the #1 program of the year..."

(R.T., Chicago, Illinois)

"The GUNSHIP team has produced a landmark in 8-bit computers. The manual is the STANDARD..."

(S.M., Pennsauken, New Jersey)

Through 5 man-years of research and development, the Gunship Design Team has crafted an unparalleled simulation experience...

- Realistic Helicopter Flight Characteristics
- True 3-Dimensional, Out-the-Cockpit Graphics
- Authentic Flight Controls and Electronics
- Accurate Weapons and Counter-Measures
- Up-to-date Enemy Threats
- Complete and Carefully Researched Documentation
- Flight and Combat Tutorials
- Hundreds of Mission Scenarios

## HOME BUSINESS & PRODUCTIVITY

### MaxThink

HARDWARE REQUIREMENTS: Atari ST, 320K IBM PC, 512K Macintosh.

PUBLISHER: MaxThink

PRICE: \$89

Remember your school days? Teachers were always telling you to construct a complete outline to make it easier to write reports. Most of us considered this a nuisance and only did it if the outline had to be handed in. But in truth, outlining before writing helps to organize and solidify your ideas, which also makes it more difficult to stray from your subject.

Enter *MaxThink*, an outliner (the publisher calls it an "idea processor") that can make writing better by helping you to brainstorm. While brainstorming, you can enter your thoughts as they come to you, and later move these ideas into the order you prefer. With *MaxThink* you insert and delete ideas, create main headings and as many subheadings as you need, and collapse or expand the outline's framework at will. But this is just some of the help *MaxThink* offers. Since you'll often be entering ideas without regard to order, the program allows you to reorganize the outline according to your needs.

Among *MaxThink*'s other options is an alarm feature. For example, I set it to time intervals of 10 minutes, which reminded me to save my work. Should your outline include database-style headings such as Name, Address, and so forth, you can invoke the report generator, which helps you create organized printouts. If you're concerned about how often specific words appear in an outline, the reference command will tell you.

There is a command line at the bottom of the screen. Novices can invoke commands by pressing the space bar to highlight the desired command and ENTER to select it. More experienced users can simulta-

neously press the first letter of the desired command and ENTER to execute their choices.

While *MaxThink* is supposed to help you think before you write, you must first become familiar with the program before you can reach this goal. Until you're familiar with it, the program can be cumbersome due to its complexity; and it also can hinder, instead of help, writing due to breaks in your concentration as you search for the correct command.

If you've been thinking of getting an outliner, consider *MaxThink*. Note, though, that novices might find the complex options too difficult to benefit their writing. The language used in the manual assumes some degree of computer literacy, as does the program itself. For someone already seasoned in computer usage, though, *MaxThink* can prove to be an excellent choice. —JUDITH ZORNBERG

### MultiMate Advantage II

HARDWARE REQUIREMENTS: 384K IBM PC.

PUBLISHER: Ashton-Tate

PRICE: \$595

The size of the package is your first clue. Any program that comes in a box the size of a large dictionary must be loaded with features.

*MultiMate Advantage II* lives up to your expectations. Don't let the size of the box intimidate you, though, since most of the package is documentation. Ashton-Tate has managed to pack overlapping novice, intermediate, and advanced courses on how to use *MultiMate* into the same box. The company has included six manuals with a two-inch ring binder and three additional spiral-bound reference books. When I first saw all this documentation, I was a bit overwhelmed. Although the manuals are not as well-marked as they could be, I found that by skimming the Table of Contents, I was able to find the information I needed.

The word processor's features range from the ordinary—such as cut-and-paste, bold text, and footnotes—to the exceptional, like its thesaurus or its ability to create libraries of stock phrases and link them with your documents. Realizing that it would be hard to remember all of the more than 300 commands, the publisher has taken elaborate steps to make it easy to use. A large plastic template that fits

above your keyboard is included, as well as a quick reference card. The most unusual aids are stick-on key identifiers that you paste on the top of your keys.

If you don't want to spend a lot of time squinting at those stick-ons, just press ALT-L, which gives you a set of command menus and provides access to additional commands. For example, "layout" on the top menu has "document reorganization" as a subheading. If you select that, a screen appears that allows you to reorganize your document—specify automatic, user specified, or no hyphenation; assign numbers to sections of the document to create an outline; or create a Table of Contents. I'm glad the publishers provided all of this help, because it's not always intuitive which key combinations correspond to a particular command. For instance, I would not expect ALT-Z to initiate bold printing, but it does.

In addition to the word processor, *MultiMate Advantage II* includes several support programs. I particularly like the thesaurus. In addition to providing a list of synonyms, it shows a word's part of speech and gives its definition. If the definition isn't the one you want, another will be presented with a new set of synonyms. The spelling checker can be used while working in a document or it can be used after you've saved your text. However, when a word isn't in the dictionary, the first letter flashes—but the flashing isn't turned off automatically after you correct the spelling. A separate command is required; this seemed like an unnecessary step. Another included module is called On-File. This minifiler appears on the screen as a box of color-coded index cards. These cards can hold about 600 characters on each side and can be sorted by subjects and key words as well as by color.

*MultiMate Advantage II* is definitely feature packed, but its price is a bit steep. Also, the publisher says it can be run using two floppy drives, but I think you should really have a hard disk. Because of this, I think *MultiMate* would be best-suited for an office or small business. To realize the full benefits of your purchase, you must spend quite a bit of time with the program. Therefore, I wouldn't recommend it for any office that has a high turn-

There are two things almost everyone has in common. An active imagination. And a tough time putting it on paper.

But now we present our *Graphics Scrapbook™* series. A huge collection of pictures that enable you to easily bring your creative inspirations to The Print Shop™,

PrintMaster™ or Create a Calendar.

On each disk there are over 100 unique pictures. For example, in our *School Scrapbook*,

teachers and students will find everything from cheer-leading to finals.

In the *Sports Scrapbook*, dozens of sports, mascots

and trophies. In the *Off the Wall Scrapbook*, well, just expect the unexpected. And plenty more Scrapbooks

are coming. So even if you can't draw a straight line, it's okay.

As long as you make a straight one to the offer below.

Apple & Compatibles, C64/128, IBM & compatibles.

Over a hundred eye-catching pictures on every disk.

# ALLOW US TO DRAW YOUR ATTENTION.

Introducing *Create A Calendar*.

Our simple, powerful tool that lets you design daily, weekly, monthly or yearly calendars. In moments.

Time flies. It might as well look snazzy as it goes by.

Among numerous features, it includes graphics, borders and fonts for just about every occasion. Or use your own pictures from the *Graphics Scrapbooks* or *Print Shop* compatible graphics disks.

What's more, it lets you write multiple lines of text on every date. To make it easy to keep track of everything

you're supposed to do. And everything you've done. So this year, go ahead and make your own calendars.

There couldn't be a nicer way to pass the time. **EPYX®**

**USE OUR PREVIEW DISK TO DRAW YOUR OWN CONCLUSION.** Send your name, address, phone number, computer type, and a check or money order for \$1.50 to *Calendar/Scrapbook Preview*, P.O. Box 3745, Young America, Minnesota 55394. Be sure to include the Part Number in the box with your order. Canadian orders add 50¢ postage, 6-8 weeks delivery. Expires 4/30/88. Valid only in cont. U.S. and Canada.

### Textra

HARDWARE REQUIREMENTS: 256K IBM PC.  
PUBLISHER: Ann Arbor Software  
PRICE: \$33

*Textra* is a well-thought-out and well-documented word processor. Its strongest features are flexibility and speed. Almost every function has two or three options. For example, you can customize the editing screen with a ruler line at the top, the bottom, or eliminate the ruler line completely. If you want, you can perform editing commands through menus or memorized keystroke combinations. The cursor moves across the screen quickly, and various functions such as search-and-replace occur almost instantaneously.

Printing with *Textra* is extremely easy. The print menu is clearly designed with choices for printing an entire document, specific pages, or a

spell checking features, such as the ability to spell check all or a portion of your document, browse in the dictionary, etc.

You can also set switches which control how the spell checking features work. (Press [F9] for more information)

The spell check features available in this menu are summarized below:

(F2), (F3) - These two features allow you to spell check all or some of your document. (Press F2 for a summary of how spell checking works)

(F7) - This feature allows you to browse in the dictionary.

(F9) - This key will lead you to a table of contents for the usage notes in *Textra*. These usage notes are full page guides on the most frequently confused and misused words, such as effect and effect.

Textra spell check menu:

A - dictionary	Word not found: dictionary
B - dictionary	
C - dictionary	
D - dictionary	
E - dictionary	
F - dictionary	
G - dictionary	
H - dictionary	

You can select a suggestion by letter, press [Enter] to select top choice, or press [Esc] to cancel this command.

Check spelling - [F2] or [F3]. Press [F9] anytime you want to stop checking... 205

file directly from disk. There is even a convenient command for printing envelopes—a tricky task with many word processors.

The main drawback to *Textra* is that when you write, you must end each paragraph with the command CTRL-P or insert a blank line between paragraphs. Otherwise, you run the risk of accidentally reformatting your entire text into one solid block of prose. If you're writing a document where blank lines between paragraphs aren't appropriate, entering CTRL-P over and over again is extremely annoying—although, even-

tually, it becomes habitual. Other drawbacks? *Textra* allows only one header and footer, and there is no macro function nor is there mail merge to create form letters (although future updates promise one).

On the other hand, *Textra* costs only \$33, and it performs as well as word processors that cost five times as much. Besides giving it an unusually low price, the makers of *Textra* are marketing the product in an unusual fashion. You can buy the latest version of *Textra*, version 4, and for an additional \$40 receive updates as they become available (you can try the product out first and send in the extra money later).

The first of such updates, Winter 86/87, includes an excellent spelling checker as well as a DOS access command. With DOS access, if you want to save a file and don't have a formatted disk handy, you can leave *Textra*, format a disk, then return to *Textra* right where you left off and save your file.

For a beginner, *Textra* may take a little effort to learn. Although the

## Computer communications made simple, made affordable. And made in America.

A new line of modems from \$139. At prices this low, you might expect a modem to come from across the ocean. But the beautifully compact Sportster 1200™ comes from USRobotics, a leading American manufacturer for over 10 years.

A Sportster internal or external modem teamed with your computer connects you to a world of information at 1200 or 2400 bps. Choose from three models,

\$139 to \$299. Easily the USA's best modem value.

**1-800-DIAL-USR** Ext. 26  
In Illinois, call 312-982-5001

The Sportster features auto-dial, auto-redial and auto-answer. And it uses the industry standard AT command set, so it works with all data communication software.

For quick reference, the bottom panel contains a printed operations summary. You also get a 28-page user's guide, a two-year warranty, USR's Telpac™ Communications Software for IBM users, and a free subscription and connect time to the CompuServe® information service.

Call us today for your nearest dealer.

## SOFTWARE REVIEWS

manual is very well-written and help screens are accessible at any time, the program is so full of possibilities, some confusion is bound to crop up. But without question, *Textra* is an excellent buy. However, if you're just starting out with word processors, you'll undoubtedly need to make a few calls to the company's tech-support hotline (which isn't toll free). I would also recommend buying the subscription version of *Textra*. The latest improvements are worth the extra money and the publisher seems sincerely interested in regularly upgrading its product. You

may grumble and groan while learning *Textra*, but its flexibility makes it the kind of word processor you'll grow to love. —DAVID ROTTENBERG

### EDUCATION & CREATIVITY

#### Galileo

HARDWARE REQUIREMENTS: 512K

Amiga.

PUBLISHER: Infinity Software, Inc.

PRICE: \$60

One of the most exciting moments in my life was the night a few

months back when I trained my new telescope on a bright blip in the sky, peered through the viewfinder, and saw Saturn, complete with rings, gazing back at me. The telescope soon began to gather dust, though, as I dug through books and magazines trying to decide what to look at on those rare nights when the New Orleans haze cleared enough to let me see something. What I needed was *Galileo*, a program that puts the stars at your fingertips.

*Galileo* uses realistic color and intensity to indicate bright stars, planets, and several hundred deep-sky objects such as galaxies and nebulae. It offers a local view, keyed to the time and location you select, or a nonspecific planetarium view. You select the field of view and direction and view the sky with or without planet and constellation names.

Especially useful to amateur as-

tronomers are features that tell you where to find Jupiter (or any planet) on a given day or that identify a particular stellar object. The program helps you find the object in the real night sky by giving you the altitude and azimuth of the selected object as well as its declination and right ascension. The manual explains what these and other astronomical terms mean and includes a wealth of basic facts for the beginner. The manual could have been made easier to use by the inclusion of an index and command reference section, but it's otherwise a good, if brief, introduction to astronomy.

*Galileo* is a wonderful teaching tool. There's a flash card option that tests your knowledge of the constellations, but more important are the program's simulations. Two tracking features let you watch the progress of the moon and planets, making it easier to understand planetary conjunctions, eclipses, and orbital oddities such as retrograde motion. You can relive an eclipse of the Sun or watch Venus change phases.

Whether you're an experienced

## MORE EMPLOYEES NEEDED NOW!

Western Temporary Services has an immediate need for 10,000 more temporary employees. And, we're paying a \$50.00 bonus to prove it. We have thousands of positions of all kinds in many fields including Clerical, Medical, Pharmacy, Light Industrial, Technical and Marketing just waiting to be filled. Check with your local Western Office today. We're in the White Pages.

EOE-M/F/H

Western Temporary Services will pay you \$50.00 upon completion of 40 hours of assigned temporary employment from any Western Temporary Services office in the U.S. Payment will be made directly to you, the temporary employee, less applicable taxes. To be eligible for this bonus offer, you cannot have been a temporary employee of Western Temporary Services between January 1, 1987 and September 15, 1987. The 40 hours of assigned work must be completed by November 30, 1987. Mail this coupon along with your copy (copies) of authorized Western Temporary Services time cards to: Western Temporary Services, ATTN:

Alice Hall, P.O. Box 9280, Walnut Creek, CA 94598. This offer is limited to one time per new qualified temporary employee, is non-transferrable to other Western Temporary Services promotions, and is not to be construed as a promise of work. Transfer of Personnel programs are excluded. Not valid where prohibited by law. Cash value of coupon 1/100¢. FC

# BEYOND

The *Zork Trilogy* has become a legend in its time, selling nearly one million copies! Now the legend continues with an extraordinary new Zorkian universe that breaks ground in computer gaming. For the first time, the character-building and combat of role-playing games joins the masterly prose and puzzles of Infocom's interactive fiction.

*Beyond Zork's* sophisticated new interface makes interaction more natural than ever, plunging you into a world teeming with magic and peril. The vast and varied Southlands of Quendor come alive as you seek fantastic treasure and combat the vicious monsters who haunt the streets and wastelands.

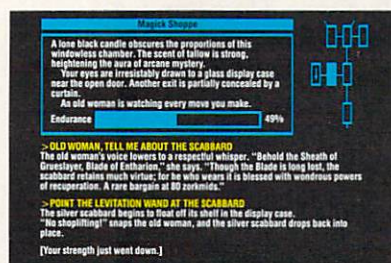

Challenge yourself to a quest that's far beyond anything you've ever experienced. *Beyond Zork*. The incredible new interactive story from the master storytellers at Infocom.

## INFOCOM™

125 CambridgePark Drive, Cambridge, MA 02140

*Beyond Zork* is available at your local dealer for the Apple II series, Macintosh, Commodore 128, Amiga, IBM PC and 100% compatibles, and Atari ST. To order direct, call 1-800-262-6868. Coming soon: Apple IIGS.

*Zork* is a registered trademark of Infocom, Inc.

One glance at *Beyond Zork* will show you that it's unlike any interactive story you've seen before. On-screen mapping. Window displays. A character that grows in strength and power. You get all the excitement of role-playing games, skillfully blended with the fabulous puzzles and award-winning prose of Infocom's interactive fiction.

Screen shown is for the Commodore 128 version.

# Where Does It All Go?

Keeping track of where and when it goes used to be a pain. But now there's PHASAR™, the software package for professional and home accounting. It's loaded with features. Here are just a few:

- \* **Interacting Account** (checking, savings, charge cards, you name it.)
- \* Extensive **help** messages at the touch of a key.
- \* Many **printer reports**
- \* **Net Worth** statements
- \* **Loan and Savings Analyses**
- \* Prints **checks**
- \* Automatic **special occasion reminders**
- \* Even a built in **name and address directory**

## Taxes: Be Prepared

All these features are especially handy around tax time. It accurately shows you the when, how and where you spent your hard earned money. But PHASAR goes beyond that. It can estimate year end taxes based on current earnings and expenditures. No more tax time surprises.

When it's time to fill out all those dreaded tax forms, PHASAR provides you with forms, calculations and worksheets. It can even print right on a 1040 form!

## Critics Are Raving!

**"well-conceived, easy-to-use package...[PHASAR] is a very useful home financial management tool. And considering its price, it is an exceptional value as well."**

PC Magazine,  
David Thraillkill

**"My hands down favorite [of financial management software] was PHASAR...It's fast and easy to use"**

AmigaWorld,  
Peggy Herrington

**[PHASAR] is an exceptionally well designed package and I highly recommend it."**

ST Applications  
Mark Baldwin

See for yourself why when comparing PHASAR to "Managing Your Money™" and "Dollars & Sense™", PC Magazine referred to PHASAR as more program for less money.

Now available for the Amiga, Atari ST, IBM PC and all compatibles. **Only \$99.95!**

## 60 Day Money Back Guarantee

### Space M+A+X

HARDWARE REQUIREMENTS: 192K IBM PC.  
PUBLISHER: Final Frontier Software  
PRICE: \$60

Mission Control's mother.

"I did," Control insisted. "There was so much to read that I forgot that part."

Fortunately for the United States's space program, *Space M+A+X* is just a game. A highly realistic project-management simulation, it gives players an administrator's eye view of the complexities of space-station construction. The 130-page manual that overwhelmed our 12-year-old Mission Controller is a project summary that acquaints you with the space station's objectives. It also provides suggestions for optimal con-

struction and operation procedures (without which you can't win).

Unfortunately, *Space M+A+X*'s realism is bought at a price. Information about containerless processing and solar electricity precede instructions for manipulating equipment. Players accustomed to load-and-go software will crash many a module before getting to that point.

Is it educational? Yes. *Space M+A+X* provides not only an in-depth look at the purpose of the shuttle program, but also gives realistic practice in project management. It's even used in college courses. Is it entertaining? Yes again. Once we got the hang of docking modules without crashing, several of us played for days trying to improve our scores. Is it challenging? Are you kidding? We ran out of money before our station was fully operational every time. We recommend this program to bright teens and patient adults—and it couldn't hurt to have an M.B.A.

## ENTERTAINMENT

### Chuck Yeager's Advanced Flight Trainer

HARDWARE REQUIREMENTS: 256K IBM PC.

PUBLISHER: Electronic Arts

PRICE: \$40

One of America's most popular living folk heroes is Air Force General Chuck Yeager, the first man to break the sound barrier and holder of numerous records for his other daring tests of America's airborne arsenal in the 1950s and 1960s.

That's why it was a real coup to get General Yeager's help in designing this new flight simulator program. By combining the flying skills of the still-superb *Flight Simulator II* with daring aerobatics, and offering an incredible array of options, this is by far the most exciting simulation of flying we've yet encountered.

You begin by deciding which of 14 planes to fly, including biplanes; light-training aircraft; World War I-, World War II-, Korean-, and Vietnam-

era fighters; modern jets; and even experimental aircraft. Each airplane has a different "feel" to its control yoke.

Each plane's instrumentation is also unique, which allows you to learn the less difficult ones and work your way into the really hard ones. Gauges and control options include indicators for heading, airspeed, altitude, vertical speed, and slip; monitors for brake, landing gear, power, flaps, and control surfaces; as well as switches for flaps, brakes, landing gear, and throttle. The program offers you 12 views, including a phenomenally exciting "chase plane" point of view which follows your aircraft through its paces so you can see exactly what you're doing.

In short, this program is a must for anyone who enjoys flying simulations. Playtesters came back to it again and again and could only be forcibly pried away from the joystick with the promise of more hours at future dates. They rated the game highly on all levels, including its beautiful 3-D scrolling graphics, its

easy-to-learn control system, its well-written tutorial, and its "feel" of flying. One of the year's best.

—JAMES DELSON

### Cauldron

HARDWARE REQUIREMENTS: C 64/128.

PUBLISHER: Broderbund Software

PRICE: \$30

Recipe for *Cauldron*:

Mix one part challenge, two parts fun, a few pinches of originality, good graphics and sound, lots of action, and most important, a built-in sequel. Simmer, brew, program, and place on disk. Insert in disk drive and play, play, play . . .

You, as a witch, must collect six ingredients so that you can brew a spell of invulnerability in your magic cauldron (where else?). This will enable you to overthrow the great Pumking, leader of pumpkins everywhere, and establish control over the world. First, you must fly across the land (on your magic broom, of course) and collect four keys that will allow entrance to the great un-

## SEXU-CATION

A revolutionary new learning tool for concerned families

SEXU-CATION is a new, one of a kind, software package designed to assist parents in educating and answering questions from their teenage children concerning various aspects of sex and sex education. The material in the package was prepared by experts in the education field. The questions and answers are factual in nature. SEXU-CATION covers topics such as the structure, and function of various reproductive organs as well as the factual aspects of timely subjects such as AIDS, HERPES and methods of contraception. The academic level of the subject matter is appropriate for ages 13 - 18.

The SEXU-CATION program generates questions from subject areas selected from a menu by the user. If a wrong answer is given to a particular question, a detailed explanation is immediately displayed. This immediate feedback is important to facilitate learning. When a question is answered incorrectly, both the question and answer are saved and can be reviewed at the end of the session. The questions are randomly selected from a large database of 500 questions. This large database allows many sessions to be conducted without the boredom of having the same questions come up each time.

SEXU-CATION is completely menu driven, requires absolutely no programming, 256k of ram, 2 360k drives, is hard disk compatible and supports both color and monochrome monitors. Complete Package \$74.95+s/h Demo \$20.95+s/h (Demo price can be applied to purchase of complete package)

derground caverns where the ingredients are to be found.

While *Cauldron* could stand alone, it doesn't. Provided on the same disk is *Cauldron II*, which is not the equal of *Cauldron*, but a step above.

*Cauldron II* begins with the premise that the witch has defeated the Pumpkin and has built a regal castle where her simple cottage once stood. She has, unfortunately, been corrupted by her power and now ruthlessly stomps out all opposition. In fact she has vanquished all her enemies with one exception. This is where you, a lone pumpkin warrior, step in.

The only foreseeable problem that these games have is that once you solve both of them there isn't much else to do. Added levels of difficulty would have been a good addition. Fortunately, between the two games there are 192 different "rooms" to go through, and this alone makes solving them difficult. *Cauldron* is a good game. *Cauldron II* is a great game. Both are well-brewed.

—DAVID LANGENDOEN

## Sub Battle Simulator

**HARDWARE REQUIREMENTS:** Amiga, Apple IIe/IIc, 512K Apple IIGS, Atari ST, C 64/128, IBM PC, 512K Macintosh.

**PUBLISHER:** Epyx, Inc.

**PRICE:** \$40

*Sub Battle Simulator* delivers great depth and scope. You must strive to stay alive while trying to inflict maximum damage to the enemy, as you command historically accurate submarines from either the German or American naval forces of World War II. To succeed requires finding the right mix of bravado and discretion.

The game's greatest appeal lies in trying to find this mix. Although you will quickly learn that engaging destroyers in gunnery duels is foolish, there are countless other lessons that aren't so obvious. Is it better to stalk the enemy from 75 feet under, using sonar as your guide? Or is it more advantageous to brazenly charge on the surface?

You can explore these possibilities by either engaging in one of 60 missions or trying to last through the

entire war. There is also a practice mode that allows you to refine your stalking and attacking routines.

Long-term playability and excitement are guaranteed with *Sub Battle Simulator* because of its four levels of difficulty. Level One gives such advantages as short reload and dive times, no weather effects, and inaccurate enemy gunners and pilots. But by the time you reach Level Three, you may find yourself in a stormy sea, unable to dive deeply because of hull damage, while airplanes equipped with depth charges bear down on you. And if you ever get tired of playing Level Four, it won't be because it's too easy.

There are, unfortunately, a pair of errors in the game that can result in your submarine running aground even though it shouldn't. This is especially aggravating when you embark on a full wartime command and are destroyed by crashing into a nonexistent land mass.

This problem notwithstanding, this game just might blow you out of the water.

—DAVID LANGENDOEN

## LEARN PROGRAMMING

### MASTER COMPUTERS IN YOUR OWN HOME

Now you can write programs and get a computer to do just what you want. Get the most out of any computer, and avoid having to pay the high price of pre-packaged software.

### LEARN AT YOUR OWN PACE IN YOUR SPARE TIME

Our independent study program allows you to learn about computers, operations, applications and programming in your spare time, at home. Our instructors provide you with one-on-one counseling.

### LEARN EVEN BEFORE YOU DECIDE ON A COMPUTER

Everything is explained in simple language. You will enjoy learning to use a computer—EVEN IF YOU DON'T OWN ONE. Learn to program on any personal computer; IBM, APPLE, COMMODORE, TRS, and more.

### BE YOUR OWN COMPUTER EXPERT

Programming is the best way to learn to use computers, and we can show you the best—and most economical—way to learn programming! Send today for your free information package. No obligation. No salesman will call.

*Better Working Eight-in-One* comes **COMPLETE**, with every productivity tool you could ever need. *Eight-in-One* is **INTEGRATED**, allowing you to pass work smoothly among all eight applications. Analyze figures from your data base with your spreadsheet, graph the results, and then place the graph in a letter to your boss. It's **SIMPLE**, with on-screen drop down menus that make it easy to learn commands. And if you get stuck, context sensitive help is right at your fingertips. Best of all, *Eight-in-One* is **POWERFUL**, giving you full-featured applications that contain everything you will need no matter how experienced you are or become.

The **DESKTOP ORGANIZER** keeps track of appointments, issues reminders of birthdays and anniversaries. The "To-Do" List helps you organize your day-to-day obligations and the Address Book keeps all your important names, addresses and phone numbers.

The **OUTLINER** provides you with a structure for organizing major and minor points into a coherent writing plan before you actually begin.

The "What You See Is What You Get" format of our **WORDPROCESSOR** makes creating documents a breeze. What you see on the screen is what will appear when you print. The Wordprocessor features full editing and formatting functions such as cut and paste, word count, search and replace, directory listing, centering, text justification and settings for margins, tabs and line spacing. Design the layout of your document with headers, footers, automatic page numbering and an automatic table of contents. Special print features can be used, such as underlining, boldface, italics and compressed print. It's easy to set-up your printer... simply select your printer from the list of pre-set printer models.

The 100,000 word **SPELLING CORRECTOR** captures over 99% of spelling and typing errors and suggests correct spellings for misspelled words.

*Eight-In-One's* **SPREADSHEET** gives you Lotus 1-2-3 file import and export.

The **DATA BASE** can read and write in DBASE III compatible files. You can search by any field and create reports on the information on file.

Present your numerical analysis visually with our **GRAPH** program. Create bar charts, point and line graphs and pie charts.

*Eight-In-One's* **COMMUNICATIONS** program takes full advantage of the features of Hayes compatible modems.

KEY: ★ Program in this issue for this computer. D Disk drive required, p Printer optional, T Television or monitor with speaker required, + See below for specific models.

### THE SYSTEMS WE TEST ON

Every FAMILY & HOME-OFFICE COMPUTING program is thoroughly tested before publication. The exact systems we use during the testing process are listed here. While you can be sure that a program will work if your system matches ours, a comparable system configuration should also work. For example, even though we don't test on the Franklin Ace, Apple programs should work on this system. Any exception to the following hardware or software configurations will be listed in the chart above. Systems that do not have a specific printer listed were tested with Epson FX-80 printers when a printer option was available.

**Apple IIe** in 40-column mode w/64K RAM, DOS 3.3, two disk drives, MPC parallel printer interface, monochrome and color monitor. Apple programs should also work on Apple IIc/II Plus. **Apple IIcs** w/1MB RAM, one 3.5-inch and one 5.25-inch disk drive, ProDOS 3.3, and Apple RGB monitor. **Atari 800XL** w/two disk drives, DOS II version 2.05, Atari 850 interface, and color monitor. Atari programs should also work on Atari 800 (w/48K), 1200XL, 65/130XE. Smaller programs should work on Atari 400 & 600XL.

**Commodore 128** in C-64 mode with two 1571 disk drives, color monitor, and Micrographix parallel graphics interface. Programs should also work on Commodore 64/64C/128D. **IBM PC** w/640K RAM, Disk BASIC D2.00, IBM Monochrome Display and Printer Adapter, monochrome monitor, IBM Color/Graphics Monitor Adapter, RGB monitor, AST Sixpack Plus, and IBM PC DOS 3.10. **IBM PCjr** w/128K RAM, one disk drive, IBM PC DOS 2.10, cartridge BASIC J1.00. **IBM PS/2 Model 30** w/640K RAM, one floppy and one hard-disk drive, RGB monitor, IBM PC DOS 3.30, and IBM PC BASIC A3.30. **Macintosh** w/512K RAM, two disk drives, Microsoft BASIC 2.1, and ImageWriter printer. Macintosh programs should also work on 128K Mac/Mac Plus/SE/II and under Microsoft BASIC 2.0. **Tandy Color Computer 2** w/64K RAM, Disk Extended Color BASIC 1.1, two disk drives, Botek-serial-to-parallel printer interface, color monitor. Programs should also work on Color Computer 1 (w/64K) and 3.

The following PC compatibles have been added to our testing list. IBM PC programs should also work on other PC compatibles with at least 128K.

**Amstrad** w/640K RAM, two disk drives, MS-DOS 3.20, Locomotive BASIC, RGB monitor. **Blue Chip** w/512K RAM, two disk drives, monochrome monitor, MS-DOS 3.20, GW-BASIC 3.20. **Commodore PC-10** w/640K RAM, two disk drives, monochrome monitor, MS-DOS 3.20, GW-BASIC 3.20. **Epson Equity I** w/256K RAM, two disk drives, monochrome display adapter, monochrome monitor, MS-DOS 3.10, GW-BASIC 3.10. **Kaypro PC 10** w/640K RAM, two disk drives, RGB monitor, MS-DOS 2.11, GW-BASIC 2.02. **Leading Edge Model D** w/640K RAM, two disk drives, monochrome and RGB monitors, MS-DOS 3.10, GW-BASIC 3.11. **Panasonic FX-600** w/640K RAM, two disk drives MS-DOS 3.10, GW-BASIC 3.10, enhanced graphics adapter, RGB monitor. **Tandy 1000** w/256K RAM, two disk drives, MS-DOS 2.11 version 02.11.22, GW-BASIC 2.02 version 01.01.00, RGB monitor. **Tandy 1000 EX** w/256K RAM, two disk drives, MS-DOS 2.11 version 02.11.24, GW-BASIC 2.02 version 01.02.00, RGB monitor.

**Tandy 1000 SX** w/384K RAM, two disk drives, MS-DOS 3.20 version 03.20.00, GW-BASIC 3.20 version 03.20.00, RGB monitor. **Vendex Turbo 888-XT** w/640K RAM, two disk drives, MS-DOS 3.20, RGB monitor. **Zenith Z148PC** w/640K RAM, two disk drives, MS-DOS 3.10, GW-BASIC 3.20, RGB monitor.

#### A HELP LINE FOR PROGRAM PROBLEMS

Call our Program Status Line any time of the day or night to receive an up-to-date summary of our latest programs, the machines on which they run, and any corrections or enhancements to the programs.

### PROGRAMMING P.S.

#### Corrections to Previous Months' Programs

#### Crisscross (August 1987, page 61)

**IBM PC & compatibles:** Due to a renumbering error, line 370 is incorrect. The line should read as follows:

```
370 GOSUB 1010:IF FL THEN 520
```

#### Memory Madness (September 1987, page 82)

**Commodore 64 & 128 (C-64 mode):** Due to a production error, line 230 is incorrect. Please change the line to read as follows:

```
230 IF T<2 OR T>3 THEN DL=50:GOSUB 3000:GOTO 200
```

### COVERAGE NEWS

Over the four-year history of our magazine, "The Programmer" has undergone many changes. Our programs have grown longer and more beneficial to our readers. We have added some computers to our coverage and have discontinued others. At this time, to allow for more programs for the growing numbers of IBMs and IBM-compatible computers owned by our readers and to provide an increasing number of longer, more useful programs, we will no longer carry program translations for the Adam and TI-99/4A computers. While FAMILY & HOME-OFFICE COMPUTING will continue to cover the Adam and TI-99/4A in our Machine Specifics department and to run articles that are relevant to and useful for all computer owners, Adam and TI owners may wish to contact one of the users' groups listed below for product information and program listings specific to those computers.

Adam and TI owners with modems can continue to find support in FAMILY & HOME-OFFICE COMPUTING's forum on CompuServe (GO FAMFORUM), the Computer Club Forum (GO CLUB), and the TI Forum (GO TIFORUM).

# Only NRI teaches you to service all computers as you build your own fully IBM-compatible microcomputer

**NEW!**  
Train with the newest Sanyo 880 Series Computer—it's fully IBM-compatible and runs almost twice as fast!

With computers firmly established in offices—and more and more new applications being developed for every facet of business—the demand for trained computer service technicians surges forward. The Department of Labor estimates that computer service jobs will actually *double* in the next ten years—a faster growth rate than for any other occupation.

## Total systems training

No computer stands alone... it's part of a total system. And if you want to learn to service and repair computers, you have to understand computer systems. Only NRI includes a powerful computer system as part of your training, centered around the new, fully IBM-compatible Sanyo 880 Series computer.

As part of your training, you'll build this highly rated, 16-bit, IBM-compatible computer system. You'll assemble Sanyo's "intelligent" keyboard, install the power supply and disk drive and interface the high-resolution monitor. The 880 Computer has two operating speeds: standard IBM speed of 4.77 MHz and a remarkable turbo speed of 8 MHz. It's confidence-building, real-world experience that includes training in programming, circuit design and peripheral maintenance.

## No experience necessary—NRI builds it in

Even if you've never had any previous training in electronics, you can succeed with NRI training. You'll start with the basics, then rapidly build on them to master such concepts as digital logic, microprocessor design, and computer memory. You'll build and test advanced electronic circuits using the exclusive NRI Discovery Lab®, professional digital multimeter, and logic probe. Like your computer, they're all yours to keep as

Your NRI total systems training includes all of this: NRI Discovery Lab® to design and modify circuits • Four-function digital multimeter with walk-you-through instruction on audio tape • Digital logic probe for visual examination of computer circuits • Sanyo 880 Series Computer with "intelligent" keyboard and 360K double-density, double-sided disk drive • High resolution monochrome monitor • 8K ROM, 256K RAM • Bundled software including GW BASIC, MS DOS, WordStar, CalcStar • Reference manuals, schematics, and bite-sized lessons.

NRI is the only technical school that trains you on a total computer system. You'll install and check keyboard, power supply, disk drive, and monitor, following step-by-step directions.

part of your training. You even get some of the most popular software, including WordStar, CalcStar, GW Basic and MS DOS.

## Send for 100-page free catalog

Send the coupon today for NRI's 100-page, full-color catalog, with all the facts about at-home computer training. Read detailed descriptions of each lesson, each experiment you perform. See each piece of hands-on equipment you'll work with and keep. And check out NRI training in other high-tech fields such as Robotics, Data Communications, TV/Audio/ Video Servicing, and more.

# HOME INVENTORY MANAGER

Use Our Program to Keep Track of Your Valuables

BY PASQUALE M. CIRULLO

Our Home Inventory Manager was presented for the Apple II, IBM PC and compatibles, and Macintosh in the October 1987 issue. This month, the program is translated for the Atari 800/XL/XE and Commodore 64/128 computers.

What is your grandmother's silver worth? What is the serial number of the color television? When did you buy the computer? When questions like these arise, the typical family has to plow through piles of papers to find the answers—if they can be found at all.

You need to know the value of your belongings in order to purchase the proper amount of insurance and to document your claims in case of fire or loss. The police department requires serial numbers in order to verify whether stolen goods it's recovered are yours. When you need repairs or when you try to claim your computer as a tax deduction, you'll find it helpful to know the purchase date.

*Home Inventory*

Manager will help you keep organized records of all your belongings (up to 250 items in each file with an unlimited number of files) along with their model numbers, serial numbers, values, locations, and other useful information.

## USING HOME INVENTORY MANAGER

Begin by typing the program into your computer, saving it to disk, and running it. (Due to the length of the program and the importance of the material being saved, we recommend that you test the program fully before using it for your actual belongings.) You'll see a menu with three choices: **START A NEW INVENTORY**, **USE AN EXISTING INVENTORY**, and **EXIT THE PROGRAM**.

If you choose **START A NEW INVENTORY**, the program will ask you for a name that you want to use for this inventory. The name that you enter must be no longer than eight characters and cannot include spaces or punctuation marks. You

can enter a question mark to see a list of your files if you are unsure what name to use. Do not add an extension to the name since the program will automatically add it for you. Once you have entered the inventory name, you'll go directly to a screen where you can enter the descriptions of new items. (See "Using the Editor" for information on entering your descriptions.)

**USE AN EXISTING INVENTORY** lets you look at an inventory file that you entered previously. The computer will ask you for the name of the file you want to use, load the file from disk, and then display the command screen. Again, if you enter a question mark instead of a file name, the computer will show you a list of all the files on your disk.

**EXIT THE PROGRAM** will allow you to leave *Home Inventory Manager* and do other things with your computer. You must leave the program through this menu item so as to close all your files and return the computer to normal operation.

## THE COMMAND SCREEN

If you choose **USE AN EXISTING INVENTORY** from the initial menu, you will arrive at the command screen. The command screen controls all operations on the current inventory. It displays the current record (the description of one item), the total number of items in the inventory, the total value of all items in the inventory, the name of the inventory file, and all the available commands (described below). To choose a command, press its first letter.

### Add

This command allows you to add new items to your inventory list. This command displays the

same input screen as **START A NEW INVENTORY** and works exactly the same way. (See "Using the Editor" for information on entering new records.)

### Back

The program will display the previous record in your inventory. This command is affected by the Item and Location commands, which are discussed below.

### Delete

This command will delete the record of any item that you no longer own. The computer will ask you to confirm that you want to delete that record. If you don't want to delete it, press "N."

### Edit

Choose Edit when you want to make corrections to a record. The computer will place the cursor at the beginning of the item line and wait for your changes. (See "Using the Editor" for information on editing your records.)

### Forward

The program will display the next record in your inventory. This command is affected by the Item and Location commands.

### Item

This command will allow you to advance directly to (and browse through) specific records of a particular item. For instance, you can use Item to look at only your televisions or only your rings. If you have a large inventory, this is much quicker than repeatedly pressing "B" or "F" until you reach the desired record. Once Item has been set, Back, Forward, and Print will only display or print the items you have specified. If you want to view other items, choose Item again and press RETURN when asked for the item.

# TEST DIVE ONE FOR YOURSELF.

In their day, they ruled over three quarters of the earth's surface.

During WWII, they viciously brought Britain to her knees. And Japan to the ground.

These were the silent killers: Tench. Gato. U-Boat.

And now, they return. In this, the most realistic, all-encompassing simulation

Canadian orders please add 50¢ for additional postage.

Please allow 4 to 6 weeks for delivery. Offer expires 12/31/88 and is valid only in the continental U.S. and Canada. Void where prohibited.

And the contents of a vital target book, among other things.

Your arsenal will include deck and anti-aircraft guns. Torpedoes. And mines.

But even all that may not be enough.

Because besides the risk of bumping a depth charge or facing a killer Destroyer, you'll still have to contend with the gunfire of enemy aircraft.

No simulation has ever had the degree of

authenticity, gut-wrenching action or historical accuracy of this one.

The first release of our new Masters Collection. And a challenge of unbelievable depth. **EPYX®**

Apple II & compatibles, Apple IIGS, Atari ST, C64/128, IBM & compatibles, Macintosh.

Independent generator & diesel engines.

Salt water tank, for trimming and compensating.

5" 25 cal. gun.

Officer's quarters.

Water purification.

60 missions. Or you'll engage in the most difficult task of all: To make it through *the entire war*.

Each vessel is completely unique and painstakingly authentic, so you'll have a lot to learn: Navigation. Weather. Radar.

tion ever created for the personal computer. You will command one of six types of American subs or German Kriegsmarine U-Boats, during any year from 1939 to 1945. You'll perform one of over

The No. 1 battery. The ship's heart.

Sea guard radar stub.

Your ammo.

The 360° periscopes.

The sealed control room. Your HQ.

## Location

Location is just like Item except that you will browse through items in a particular location. For instance, it will allow you to see (and print) only the items in the living room or items in your safe-deposit box or will help you find a book that you lent to a friend. Once Item or Location has been set, an asterisk will appear next to the number of items at the top of the screen to remind you.

## Print

This command will let you print your inventory on paper. You can choose to print only the currently displayed record or your entire file. If Item or Location has been set, the computer will only print a partial list.

## Quit

Quit will automatically save your present inventory to disk and then return to the initial menu.

## Save

This command will save the current inventory on your disk and let you continue working with it.

## BEAR IN MIND

Problems may arise when saving or loading an inventory file. To minimize the problems, keep your inventory files on a separate disk from your programs and always keep a disk in your disk drive when using the program. Remove the disk only when you have exited the program.

When asked for a file name, don't use more than eight characters and don't use an extension. This is necessary because when the program creates a file for your inventory list, it actually creates two files: a sequential file and a random-access file with the same name but different extensions. These files can be seen when you ask for a catalog of your disk.

Also, the total value shown at the top of the screen is the value of all the items. The program adds the value field, not the price field, for each record. When entering this information do not use a dollar sign as the computer will evaluate it as zero.

## AND DON'T FORGET

Be sure to keep a backup copy of your inventory files and store it in a safe place, preferably in a safe-deposit box or somewhere else outside your home. You may want to keep a hard copy of your inventory handy, too.

Always leave the program through the Exit option of the initial menu. Some of your data may be lost if you break out of the program.

## USING THE EDITOR

Whenever you choose to <START> A NEW INVENTORY or Add or Edit an entry, the program enters Editor mode, and only certain keys will work with the Editor.

The Atari 800/XL/XE uses the BACKSPACE key to delete a character to the left of the cursor, while the Commodore 64 and 128 uses the DEL key.

To move the cursor from one field to another, use the UP-ARROW and DOWN-ARROW keys (not the RETURN key).

If you make an error in typing, you can move back and forth on the line by using the LEFT-ARROW and RIGHT-ARROW keys. You can also switch between Insert mode and Overtyping mode by pressing the INSERT key on the Atari 800/XL/XE or the INST key on the Commodore 64 and 128.

Finally, only use the RETURN key when you are finished entering the record and want to move to the next record. In Edit mode, pressing RETURN will redisplay the command screen.

## Atari 800/XL/XE w/DOS 2.0 or 2.5 (printer optional)/Home Inventory Manager

# Choose Your Adventure!

Explore the Great Lakes from Detroit to Buffalo with Scenery Disk # 11. Or navigate the wide open expanses of the western United States with Scenery Disks # 1 through # 6.

Scenery Disk # 11 features include new airborne hot-air balloons, sailplanes, and a multicolored ground patterning system. Western U.S. Scenery Disks 1-6 provide enough airports, visual cues, and radio nav-aids to support both VFR and IFR cross-country navigation.

# You asked for it. You got it!

## A COLLECTION OF OVER 200 SOFTWARE REVIEWS FROM FAMILY COMPUTING:

**PREMIER  
EDITION**

### The Annual Software Review

**An invaluable, at-your-fingertips shopping guide containing all the facts you need to make the best possible software buying decisions.**

You told us you liked our regular monthly software reviews but you needed more. Well, here it is. Introducing the first ANNUAL SOFTWARE REVIEW — a composite "hit parade" of more than 200 of your favorite programs reviewed this past year in Family Computing.

Now, in one place, in one issue, you've got it all. Updated software descriptions. The latest prices. A fresh look at the classics. Warranty information. Expert ratings of performance, documentation, graphics, and value. Plus in-depth reviews of many of your other favorites.

**SEE FOR YOURSELF WHY THE ANNUAL SOFTWARE REVIEW IS A MUST FOR EVERY COMPUTER-WISE FAMILY**

#### **FIND WHAT YOU WANT THE EASY WAY.**

It's a cinch to find your way around THE SOFTWARE REVIEW. Programs are indexed alphabetically, by application, and by computer. So you can head directly for the program you want, comparison shop, or just browse.

**GET ALL THE INFORMATION YOU NEED IN ONE CONVENIENT SOURCE.** We cover every base: business/productivity, education and entertainment. You'll find programs for the Apple, Atari, Commodore, Tandy, IBM PC & Compatible Computers.

**SAVE TIME.** No more searching for clippings of reviews or old issues. No more wasted time in stores trying to find the program right for you. THE ANNUAL SOFTWARE REVIEW puts everything you need at your fingertips so you can make the right buying decisions every time.

**SAVE MONEY.** For only \$3.95 (plus postage and handling), you'll have all the information you need *when you need it*. What's more, the REVIEW is packed with useful information you can use with software you may already own.

**THE ONLY GUIDE OF ITS KIND.** Our unique long and short reviews give you the kind of comprehensive, in-depth information unavailable anywhere else.

**HAVE A NEW LOOK AT THE "OLDIES BUT GOODIES."** Get updated reviews of the classics: popular software that's stood the test of time.

**DELIVERED TO YOUR DOORSTEP.** Don't run the risk of not finding THE ANNUAL SOFTWARE REVIEW on your newsstand. To reserve your copy, just fill out and mail the coupon along with your check or money order to the address below:

*Yes*

Please send me \_\_\_\_\_ issues of THE ANNUAL SOFTWARE REVIEW at \$3.95 each plus \$1.00 for postage and handling. You can expect delivery within 4-6 weeks.

# TURKEY'S REVENGE

BY JEFF DONAHUE

Farmer Freddy Fleetfoot woke up late on Thanksgiving morning to a tremendous crashing noise in the barnyard. With only minutes to spare before he had to fetch his prize turkey and deliver it to the town market, Farmer Fleetfoot discovered that his fat fowl had not only flown the coop, but had punched a bunch of holes in it, as well!

Apparently, the turkey had eaten all the grain in the coop and grown to monstrous proportions. What will Freddy do? Or, more to the point, what will you do? As Freddy, you must stop that bird from gulping down the rest of your grain and get the tremendous turkey to the market on time.

Freddy (represented by a "Y" on the screen) begins the game just outside the farmhouse. The turkey (represented by a "Q") starts out beside the coop. If the turkey can't eat some grain, it will grow tired from hunger and let you capture it. But, things aren't all that simple. Scattered around the barnyard are your last eight sacks of grain (depicted as asterisks). Should the turkey manage to eat four of these, it will get even bigger and who knows what will happen? (Hint: There's a gate

in the fence at the bottom of the screen.) Also scattered around your farm are eight haystacks (an "A" represents each haystack) which you cannot go through, but which the turkey will throw to the four winds when he hits one.

Your only chance is to collect as much grain as possible, as quickly as possible. To move around the farm at the beginner or expert level, press the following keys: "I" (up), "J" (left), "K" (down), and "L" (right). Good luck, farmer! And beware of the terrible turkey. If you two collide while it's still going strong, the big bird will knock the stuffing out of you!

JEFF DONAHUE is the technical associate at FAMILY & HOME-OFFICE COMPUTING.

# What's New at AMERICAN DESIGN COMPONENTS?

"The Source" of the  
electro-mechanical components  
for the hobbyist.

We warehouse 60,000 items at American Design Components — expensive, often hard-to-find components for sale at a fraction of their original cost!

You'll find every part you need — either brand new, or removed from equipment (RFE) in excellent condition. But quantities are limited. Order from this ad, or visit our retail showroom and find exactly what you need from the thousands of items on display.

OPEN MON. — Sat., 9-5

## THERE'S NO RISK.

With our full 90-day warranty, any purchase can be returned for any reason for full credit or refund.

## PC 8300 HOME COMPUTER

(Advanced version of the Timex 1000)

42-key mechanical keyboard (not membrane). Contains 2K RAM, Reverse video, Z80A, 6.5MHz processor, ROM 8K BASIC. Graphics capability/sound—music, TV or monitor. Joystick input operates on 115 VAC. Includes: AC adapter, TV cable, & pair of cassette cables. Will run all pre-corded tapes for Sinclair/Timex 1000-ZX85. Mfr — Power 3000. (In orig. boxes.)  
Item #10336 \$29.95 New

## Accessories...

- ★ 16K RAMPACK upgrade  
Item #10337 \$9.95 New
- ★ 32K RAMPACK upgrade  
Item #12148 \$19.95 New

## 15" COMPOSITE VIDEO MONITOR

15", green phosphor, high res. (12 lines center) & bandwidth from 10Hz to 30Hz ± 3dB. Operating volt.: 120/240VAC, 50/60Hz, 65VA max. Mfr — Motorola — Alpha Series  
Item #10044 \$34.95 New

Call or Write with  
Your Requirements!

## Insides of the COMMODORE Computer

Commodore VIC 20 CPU board & mechanical keyboard. For parts only — guaranteed not to work!  
Item #12144 \$14.95 RFE

## COMMODORE Cartridges C-64

12 asst. cartridges — Number Nabber, Star Post, Financial Advisor, Radar Rat, Jupiter Land, Magic Compos, Viduzzles, Golf, Easy Calc, Simon Basic, Dragon's Den, & ABC Voice. Item #13573

Set of 12 — \$49.95 New

## C16 & +4

9 asst. cartridges — Script + 2, Calc Plus, Script +, Jack Attack, Pirate Adventures, Atomic Miss, Strange Odyssey, Financial Advisor, & Logo. Item #13572

Set of 12 — \$29.95 New

## ADAM Computer...

(Less printer)

No wiring nec. (just plugs together). Hook-up diag. incl. Includes: keyboard, 1 cassette digital data drive, 2 game controllers, power supply & one cassette. Cap. of running CP/M, w/built-in word processor. Item #7410

Complete — \$99.00

## ADAM Printer...

Complete, less top cover plate. Friction feed. Takes standard paper 8 1/2" x 11". (Customer returns; tested — operational.)  
Item #8839 \$69.50

## ADAM Accessories

- Data Drive —  
Item #6641 \$19.95
- Printer Power Supply —  
Item #6642 \$14.95
- ASCII Keyboard —  
Item #6643 \$19.95
- Controllers — Set of 4  
Item #7013 \$9.95
- Cassettes —  
(incl. Smart Basic, Buck Rogers & blank cassette.) Item #7786
- BAKER'S DOZEN — \$19.95
- Auto-Dialer Address Book —  
Item #12365 \$19.95
- Daisy Print Wheel —  
Item #13305 \$3.95
- Ribbon Cartridge —  
Item #13306 \$3.95

## HIGH-RESOLUTION TTL MONITORS

12VDC. Mtd. in metal housing. Schematic supplied.

## 12", Green Phosphor

Item #6811 \$19.95 New

## 9", Amber

Item #14332 \$14.95 New

## ADAM 5 1/4" DISK DRIVE

Gives your Adam fast, reliable data storage and retrieval. Can hold up to 160K bytes of information. Uses industry-standard SS/DD disks. Connects directly to your Adam memory console. Comes with disk drive power supply, Disk Manager disk and owner's manual. Mfr — Coleco, model 7817  
Item #12830  
Like New — \$199.00

## ColecoVision Game (Factory tested — like new!)

Also includes power supply, instruction manual, modulator, and one Donkey Kong cartridge.  
Item #7411 \$29.95

## ColecoVision Accessories...

- ColecoVision to Adam  
Expansion Kit  
Just plugs into your ColecoVision.  
Item #9918 \$59.50
- Expansion Module #2  
Incl. Turbo cart.  
Item #13146 \$39.95 New
- Roller Controller  
Incl. Slither cart.  
Item #13147 \$39.95 New
- Super Action  
Controller Set  
Incl. Baseball cart.  
Item #13148 \$39.95 New

## WE CARRY A FULL LINE OF COMPUTER & GAME EQUIPMENT and ACCESSORIES; ELECTRONIC COMPONENTS; MODULES!

## COMMODORE/AMIGA POWER SUPPLY

DC Output: +5V @ 8 amps.  
+12V @ 1 amp.  
-5V @ 250 ma.  
Input: 110VAC/60 Hz., ±20%  
Dim.: 12" L x 3 3/4" H x 5 3/4" D  
Encl. in alum. housing. Fan cooled.  
Mfr — Shindenger Electric  
#130569SXD  
Item #14707 \$19.95 New

## COMPUTER GRADE POWER SUPPLY

Other uses—runs CB & car radios.  
Comes ready to plug in!  
DC Output: -5V @ .5 amp.  
+5V @ 3 amp.  
+12V @ 6 amp.  
Input 115V/60Hz. Dim.: 9 1/4" W  
x 3 3/4" H. (Rubber ft. incl.)  
Item #9501 \$24.95 New

## 140 VA MINI MICRO- COMPUTER REGULATOR

Provides voltage regulation & ultra-isolation for microprocessor-based equipment. Contains less than 3% harmonic distortion, better than 60 dB traverse noise rejection. Contains dual outlet for CPU & monitor, & 6 ft. line cord.  
Input: 95 — 130V, 60Hz.  
Output: 120V @ 1.17A  
Dimen.: 11 1/2" L x 4 3/4" H x 5 1/2" W  
Mtd on metal base w/rubber ft.  
Mfr — Sola #63-13-114  
Item #9999 \$99.00 New

# Bigger is better!

**Introducing SuperPrint.**  
The extraordinary printing program that not only prints stationery and greeting cards, but also super-sized posters almost 5 feet tall!

Now there's a printing program so advanced you can produce a giant wall decoration one moment and a dozen party invitations the next. Want a Happy Birthday banner decorated with candles? It's a piece of cake. Need a five-foot tall Santa Claus poster at your next Christmas party? Or a giant dinosaur? With SuperPrint, your wildest creations are just a few keystrokes away.

## Graphics Unlimited

If you use your computer as an at-home printing shop, you'll love these exclusive SuperPrint options:

- Sizes: each graphic prints in four different sizes, super small to super large.
- Graphics: almost 200 different ones, from tiny "clip art" icons to

giant 55" ultra-graphics. Choose from seasonal and holiday themes, sports, animals, children's decorations, party motifs, and more!

- Type Fonts: a choice of six in solid, outline, and bold formats.
- Borders: an unlimited number of your own custom borders plus ten predesigned styles.
- Wall-size Calendars: custom decorate your own giant wall calendars with a choice of fun graphics you won't find elsewhere.
- Scroll and Stamp Graphics and Text: scroll through your entire creation and stamp on an unlimited number of different graphic elements (other programs limit you to one or two).

And, SuperPrint lets you see your creation on screen *exactly as it will print*. No other printing shop program does that!

To start super-printing, see your local software dealer or call

**1-800-325-6149.**  
(In Missouri call 1-800-329-2179.)

Actual size 25½" x 55"

**SCHOLASTIC**  
**SUPERPRINT!™**

SuperPrint works with your Apple 128K and most dot matrix printers. MS DOS version available January '88.

# NOW Your Computer Writes PROGRAMS for YOU with QUIKPRO+II

*In minutes even if you know nothing about programming!  
For COCO, IBM, Tandy, Apple, Commodore, and others.*

OVER

1/2 OFF

reSoft  
QUIKPRO+II  
ic Program Generator

To Computer Users.

Now you can tell your computer what you want and your computer can write your programs for you in minutes to your custom design — easily and without requiring any programming background from you...with QUIKPRO+II.

## A Breakthrough In Micro Computer Technology

You know your computer is fantastically fast...once it knows what to do. Programs and software are what makes it happen. Every task your computer performs for you requires some kind of program. Until now, you could only get programs in just one of two ways: buy a canned package that many times doesn't meet your needs or hand over hundreds or thousands of dollars for a custom programming job. Now, you have a better choice...

## Programs Without Programming

Automatic programming is what it's all about. And, with QUIKPRO+II the Automatic Program Writer, your computer can actually write programs for you. You can quickly generate a new individual application program when you want it with QUIKPRO+II. Each program you create is a completely stand alone program that will run in the standard BASIC language you already have on your own computer. QUIKPRO+II creates filing, data retrieval, and report programs. Best of all, **you do not have to become a programmer** to use QUIKPRO+II. The QUIKPRO+II software becomes your personal programmer, waiting to do your work for you any time of the day or night you choose to use it.

*QUIKPRO+II comes complete in its own vinyl storage binder, with 80 page manual and disk ready to use.*

## Proven and Widely Used

**Businesses, Schools, Hobbyists and Government are among our thousands of users...**

John Hopkins  
U.S. Department of Agriculture  
Proctor & Gamble  
Federal Express  
American Express  
Monsanto  
Ford Motor Company  
Duracell International

NASA  
Westinghouse  
U.S. Navy  
NCR  
DuPont  
RCA  
Exxon  
AT&T  
Texas Tech

General Electric  
Random House

Tandy Corporation  
Satellite Broadcasting

## APPLICATION CHECKLIST

Here are a few of the thousands of possible applications you can do with QUIKPRO+II...And most can be created in a few minutes.

### BUSINESS USES

Customer Filing  
Master Files for General Ledgers  
Accts. Receiv.  
Accts. Payable  
Telephone Logs  
Telephone Lists  
Hotel/Travel Data  
Reservations  
Property Control  
Library Catalogues  
Inventories

### EDUCATIONAL USES

Student Records  
Grade Records  
Teacher Lists  
School Lists  
Program Design  
Course Design

### HOME & HOBBY USES

Personal Records  
Check Lists  
Club Rosters  
Telephone Directories  
Recipe Files

## CROSSWORD PUZZLER

BY STEVE C.M. CHEN AND KAREN KANE

This is the fifth in a series of crossword puzzles. This month, clues and data for a Thanksgiving puzzle are presented along with the solution to last month's puzzle (page 120). The solution to the Thanksgiving Crossword Puzzle will appear in next month's issue along with data for a new puzzle.

In order to solve or print out the puzzle, you must have the master puzzle program. The Commodore 64/128, IBM

PC and compatibles, and Tandy Color Computer versions of the program were presented in the July issue, and the Adam, Apple, Atari, and Macintosh versions appeared in August. Back issues of the July and August issues are available for \$4.25 from Crossword Puzzler, c/o FAMILY & HOME-OFFICE COMPUTING, 730 Broadway, New York, NY 10003. Please indicate your specific brand and model of computer.

## CRADLE SONG

BY JOEY LATIMER

"Cradle Song," by Johannes Brahms, has been lulling babies to sleep for about a hundred years with its soft, waltzing melody. In this edition of "Microtones," I've programmed a version of the "Cradle Song" that will transform your micro into a music box extraordinaire. All you have to do is type in the program listing for your computer, SAVE it, then RUN it (making sure the volume is turned up on your video monitor or TV). With a little luck, your young ones (and maybe even

your pets) will nod out in no time. But, if some family members fall asleep who aren't supposed to, you may find it appropriate to boot up *Frightening Lightning* from the October 1986 issue. Just kidding . . .

## New dimensions in Bible study.

We're celebrating over 5 years  
of market leadership! Version  
4.0 of **THE WORD** processor  
includes the complete text of  
the KJV or NIV Bible for just  
\$199.95. Our software searches  
for any word or text string.  
You can even create indexes  
on concepts and build your own  
library of research material.

Our new **INSTANT ACCESS**  
add-on product for just \$49.95  
finds any word instantly! And our  
family of products is still growing  
with topical cross references and  
personal commentary to annotate  
your Bible, and Greek and  
Hebrew transliterators which  
include Strong's Concordance.

**Bible Research Systems (512) 251-7541**  
2013 Wells Branch Parkway, #304, Austin, Texas 78728

Postage extra. For IBM, MSDOS, Macintosh. Some programs also for Apple II, C64, TRS80, CPM.

The Holiday Gift  
Guide contains  
many interesting  
gift ideas for you  
and your  
families to enjoy.  
Look here again  
in the December  
issue of Family  
And Home Office  
Computing.

## CHECKING OUT THE HITS!

**B**ack issues of Family & Home Office Computing  
are now available. These rare "Collector Clas-  
sics" contain exclusive information on software,  
shopping guides, hardware reviews and tips for get-  
ting the most out of your computer.

To order, see issue details and check off the ones  
you want. Send this ad—along with your check or  
money order—to our address below. Supplies are  
limited, so please order now.

Check desired issues:

## WIN YOUR STATE LOTTO WITH YOUR COMPUTER!

"The home computer is the most powerful tool ever held by man" (or woman for that matter!)

Are you still wasting money with random guesswork?

This amazing program will analyze the past winning lotto numbers and produce a powerful probability study on easy to read charts in just seconds. With single key presses from a menu you'll see trends, patterns, odd/even, sum totals, number frequency and more on either your screen or printer. Includes automatic number wheeling, instant updating and a built-in tutorial to get you started fast and easy!

**CHECKS & CHARGE CARDS ACCEPTED

## DESIGN NEEDLECRAFT CHARTS

for Counted-Cross-Stitch, Needlepoint, Latch Hook, Knitting,  
etc. using a revolutionary new computer program—  
**The Stitch Grapher.**

Graphs as large as 240 X 400 stitches with up to 30 symbols may be  
generated and printed with any of 3 grid styles along with a color  
chart. A unique windowing feature allows the designer to move, copy,  
rotate, mirror image, save and re-use previous designs.

**The Stitch Grapher** is compatible with the **64K Apple II**  
and **256K IBM-PC** microcomputers. Disk plus 90-page spiral bound  
manual—\$89.95. Dealer inquiries welcome. To place an order, or for  
complete information contact

### COMPUCRAFTS

RFD 2 Box 216, Lincoln, MA 01773  
(617) 259-0409

Apple version supports the Imagewriter and Scribe printers directly  
(depicted grid style is available for these printers only). Other dot  
matrix printers require graphics capable interface card or separate  
support software. IBM-PC version supports CGA, EGA graphics adapt-  
ers and IBM / Epson compatible printers.

# 4-H for YOUTH

## for NEW TECHNOLOGIES

CONTACT YOUR COUNTY  
EXTENSION OFFICE

# Compose Yourself!

Now create superb sounding music on your IBM® PC. Ad Lib™ makes it easy.

Just when you thought you'd heard it all, along comes Ad Lib.

And with it comes rich, room-filling music like you've never heard from a PC before. With rumbling bass, crystal clear highs, up-front mid-range. All of it composed and performed on the first complete PC music system for people like you — long on desire, a little short on experience.

The heart of the system is the Ad Lib Music Synthesizer Card™. An electronic sound synthesizer based on the same digital technology found in professional keyboards and the finest music computers.

Just plug it into your PC and get clean, powerful music through high fidelity headphones, bookshelf speakers, even your home stereo. It'll handle up to eleven different instrument sounds playing at once, so it's perfect for anything from a solo to a symphony.

There's also Ad Lib Visual Composer™, about the most instinctive composition software ever devised. Simply draw lines to indicate notes, using the on-screen piano keyboard as a guide. Change instruments, tempo and volume with a couple of keystrokes. Cut, copy and paste portions of your music in a snap.

Included with the program is Composition Projects™ #1, a step-by-step guide to creating all kinds of music, including classical, jazz, bossa nova, ragtime, and more. Just the thing for an ever-expanding repertoire.

Visual Composer is worth \$89.95 if purchased separately, but it's yours free when you buy the system.

Then play back all of your creations, as well as several pre-programmed selections, on the Juke Box™ playback software, also included with your system.

Look for the Ad Lib Personal Computer Music System™ at selected computer and music stores, or order direct from Ad Lib with your check, Visa or MasterCard.

The Ad Lib Personal Computer Music System. At last, you have what it takes to make great-sounding music.

**The Ad Lib Personal Computer Music System.** Includes the Ad Lib Music Synthesizer Card, Juke Box playback software, free Visual Composer software with 50 pre-set instrument sounds and Composition Projects #1 ..... \$245.00

**Enhance your system further with this additional Ad Lib software:**

**Music Championship™ #1 — Basic Concepts.** Learn to identify basic musical concepts, including tempo, mode, rhythm and key. Perfect for all ages. The first in a series of music training programs combining syn-

thesized music with exciting computer game competition . . . \$39.95

**Instrument Maker™ software.** Lets you create and save new instrument

sounds for use with Visual Composer. Alter 23 sound characteristics like attack, sustain and decay. Modeled after professional music synthesizer software . . . \$49.95

Look for more Ad Lib music software titles coming soon.

Requires IBM PC, XT, AT or compatible, 256K RAM, DOS 2.0 or higher, CGA, EGA or monochrome graphics adaptor.

To place your order, or to request your free demonstration recording, call us toll-free today.

# The New Tandy® 1000 HX

## The first desktop PC compatible with MS-DOS® built in.

The new Tandy 1000 HX is the low-priced leader in 3½" disk-based PC compatibles. Best of all, MS-DOS is included in ROM—just turn it on and you're ready to go.

A high-capacity, 720K 3½" disk drive is built in—and there's room for a second 3½" drive. The Tandy 1000 HX is PC compatible, so you can use all of the popular MS-DOS programs available on 3½" disks.

Your first program is included—the 1000 HX comes with its own graphics-oriented Personal DeskMate™2 seven-in-one applications software.

You'll be able to plug in joysticks, a color mouse, a monitor, a printer—even an external 360K 5¼" disk drive—without buying extra-cost adapters. The 256K Tandy 1000 HX is expandable, too! By installing the Memory PLUS Expansion Adapter you can add modem telecommunication and RS-232 serial options.

Come see the new Tandy 1000 HX today. (25-1053)
